

Appendix 4 – Selection of research products and activities

(Please provide a selection of the unit or team/theme scientific production and activities)

EVALUATION CAMPAIN 2018-2019

GROUP E

Name of the unit / the team / the theme:	Unité Halieutique de Manche – Mer du Nord
Acronym:	HMMN

Head of the unit / Team leader / Theme leader for the current contract: Paul MARCHAL

Head of the unit / Team leader / Theme leader for the next contract: Paul MARCHAL

Please, list the unit's/team's scientific outputs and activities (see the instructions in the self assessment document and see also the "Guide des activités et produits de recherche" of the scientific domain, on line - or soon to be on line - on the Hceres website).

The unit is required to prepare a complete list of outputs to be handled to the expert committee upon request.

Please, make a separate list of outputs and activities for staff recruited during the period under evaluation.

Please stick to the document frame, and delete all text in italics.

I - SCIENTIFIC OUTPUTS AND ACTIVITIES, ACADEMIC REPUTATION AND APPEAL

1- Articles

The top 20% articles (i.e., the most representative in terms of results and HMMN contribution) are highlighted in yellow; the remaining 80% articles are highlighted in grey.

4- Students' follow up in association with doctoral schools

Of the 9 PhD students who graduated over the period 2013-2018 (Section III.3), 8 found a job in the year following their viva, and 1 is still unemployed. HMMN supervisors have been active in providing assistance to their PhD students before and after the end of their contracts. This could take different forms: forwarding postdoctoral and/or permanent job offers, providing reference letters, offering guidance in drafting CVs and/or cover letters. Importantly also, PhD students have been strongly encouraged to have a postdoctoral experience abroad, and in any case in a different research unit, so to gain a diversified research experience. Of the 9 PhD graduated students, 4 of them spent 3-12 months in a reputable foreign lab (CSIRO, Australia; Thünen Institute, Germany; University of Wageningen, The Netherlands; University of Seattle, USA). Another common practice has been to invite to the viva foreign external examiners that were both specialists in research fields investigated by the students, and potential postdoctoral providers or employers. Overall, 3 PhD students found a post-doctoral position in a foreign laboratory after their viva (University of Hamburg, Germany; NOAA Seattle, USA; University of Cape Town, South Africa).

5- Participation to international training programs (e. g. Erasmus Mundus)

HMMN has taken part in the training of 11 foreign students from Africa, South America, Canada (who came along with their national grants), Turkey (taking advantage of the Erasmus Programme), and The Netherlands (with funding from IFREMER – Scientific Direction grant). More details are shown in the Table below.

6- PhD student participation to scientific animation and unit/team life

PhD students are invited to different internal HMMN meetings, e.g., weekly/monthly flash laboratory and quarterly HMMN video-linked meetings (See auto-evaluation report, Section 1.4 for a description of these meetings). They are also required to present their work, whether it is finalized or in progress, during the annual HMMN scientific days, and also in the occasion of the annual (CMMN) students seminars. Finally, a rehearsal is systematically organized 1-2 weeks prior to the viva in plenary, with all HMMN staff convened either physically or via a videolink, so PhD students get a chance for a ultimate feedback to improve their talk.

Over the period 2013-2018, HMMN PhD students have also been particularly active in the organization of special events, like the Pint of Science festival where several senior researchers (from HMMN and other regional research institutes) presented their work to a non-specialized audience (see Section II.5).

7- Participation of team members in setting up Master courses

8- Student publications (for Biology only)

As could be seen in Section III.3, 22 out of the 139 WoS-referenced publications (16%) were thus co-authored by a PhD student supervised by HMMN scientists. The PhD student was first author in 19 of these publications (14%). The IF median (2.29) is within HMMN range (2.33), while two publications associating or first-authored by an HMMN PhD student had an IF greater than 5.
