

Environmental Management Accounting

Christine M. Jasch

Environmental Management Accounting: Informational and Institutional Developments M.D. Bennett, J.J. Bouma, T.J. Wolters, 2005-12-30 Environmental Management Accounting (EMA) is increasingly recognised as a distinguished tool of environmental management. It helps to integrate a company's environmental and business interests, whereby enhancing corporate eco-efficiency in terms of reducing environmental costs or making one's product more competitive. This book gives a comprehensive coverage of the state of the art. It presents a number of EMA frameworks that companies can take as a basis for implementing their own specific EMA structures. Besides discussing environmental accounting issues within conventional management accounting, it gives a detailed picture of materials flow (cost) accounting as an alternative way of looking at the ecology-economy relationships at the corporate level. A fascinating case study shows how a large company (Siemens) applies materials flow accounting and what benefits it entails.

Environmental Management Accounting Isabell Keil, 2004-09-08 Essay from the year 2003 in the subject Business economics - Investment and Finance, grade: 1,3 (A), University of Glamorgan, language: English, abstract: The importance placed on environmental issues has increased during the last two decades. Businesses have become increasingly aware of the environmental implications on their operations, products, and services. Environmental risks may have serious consequences for the prospects of a company, with particular financial consequences. Businesses experience increased pressure from various stakeholders to report on environmental behaviour. Smith and Lambell (1997) stated that the topic of environmental accounting is not new, because many companies already produce environmental statements within their annual reports. Traditional accounting techniques such as financial and management accounting are used to report on the environmental implications of a business. Smith and Lambell (1997) also argued that companies should cease considering the environment as a given factor and take it into their accounts. This can be done by identifying the environmental costs of a product, service, or process. The environmental costs increased as a consequence of this, amongst other reasons. The existing conventional accounting systems are not able to deal with these environmental costs because they tend to attribute them to general overhead accounts. As result managers are often unaware of them and have no incentive to reduce them (UNSD, 2003). Environmental Management Accounting, a variant of environmental accounting, provides managers with knowledge about these environmental costs by extending conventional methods of accounting to capture them (Smith and Lambell,

1997). Environmental Management Accounting (EMA) generates, analyses and uses financial and non-financial information to support internal management. It is a complementary management accounting approach to the financial accounting approach, according to Bennett and James (1998a). EMA helps to identify and allocate environment-related costs and aims to develop appropriate mechanisms for this (Frost and Wilmhurst, 2000). Key application fields for EMA are: assessment of annual environmental costs/expenditures, product pricing, budgeting, investment appraisal, calculating costs and savings of environmental projects, or setting quantified performance targets, to name only a few (Jasch, 2003). Frost and Wilmhurst (2000) stated that EMA practices have resulted in cost savings and competitive advantage.

Environmental Management Accounting – Purpose and Progress M.D. Bennett, P.M. Rikhardsson, S. Schaltegger, 2012-12-06 This is the second book of selected papers on environmental management accounting (EMA) which has been developed for Kluwer by the Environmental Management Accounting Network - Europe (EMAN-Eu), drawn primarily from papers presented at EMAN-Eu, to bring together several examples of leading thinking and practice internationally in this rapidly developing area. The authors include academics, practitioners from industry, and government policy-makers, and the subjects covered range from individual company experiences to the role of government in promoting EMA in industry. The papers included in the book provide several examples of how EMA can be applied in practice both in large corporations and in small and medium-sized enterprises, and of reports on the extent of the implementation of EMA and the conditions which encourage this. The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives.

Environmental Management Accounting for Cleaner Production Stefan Schaltegger, Martin Bennett, Roger L. Burritt, Christine M. Jasch, 2008-10-10 Sustainability requires companies to develop in an economically, environmentally and socially sustainable manner. Corporate sustainable development in turn requires movement towards cleaner production. In order to recognize the potential from cleaner production - reduced costs and fewer environmental impacts through the reduced use of materials - environmental management accounting (EMA) is a necessary information management tool. Environmental Management Accounting for Cleaner Production reveals a set of tools for companies to collect, evaluate and interpret the information they need to estimate their potential to use cleaner production to realize cost savings and to make the best decisions about the available cleaner production options. EMA is therefore the key for driving environmental progress, cost savings, increased competitiveness and corporate sustainability through the means of cleaner production.

Environmental Management Accounting and Supply Chain Management Roger L. Burritt, Stefan Schaltegger, Martin Bennett, Tuula Pohjola, Maria Csutora, 2011-05-19 This volume's focus on the environmental accounting of

supply chain processes is of particular relevance because these processes supply data about the environmental impact of relationships between business organisations, an area where the boundary separating internal and external accounting is ill-defined. Here, contributors advocate what they term 'accounting for cooperation' as a more environmentally positive complement to the paradigmatic practice of 'accounting for competition'.

Environmental Management Accounting Procedures and Principles, 2001 The Expert Working Group on Improving Government's Role in the Promotion of Environmental Management Accounting (EMA), was formed when it was realised that although a number of governments were interested in promoting EMA, there was little communication between the agencies involved. This, the first publication of the Working Group, presents the terminology and techniques used by its members. It aims to establish a common understanding of the basic concepts of EMA and provide a set of principles and procedures to guide those interested in its application.

Implementing Environmental Management Accounting: Status and Challenges Pall M. Rikhardsson, Martin Bennett, Jan Jaap Bouma, Stefan Schaltegger, 2005-11-13 This book brings together examples of leading thinking and international practice in the rapidly developing area of environmental management accounting (EMA). The authors include academics and practitioners from industry and the subjects covered range from individual company experiences with implementing EMA to national experiences regarding the adoption and diffusion of EMA practices.

Environmental Management Accounting Christian Herzig, Tobias Viere, Stefan Schaltegger, Roger L. Burritt, 2012-03-15 Sustainable development will not happen without substantial contributions from and leading roles of companies and business organizations. This requires the provision of adequate information on corporate social and ecological impacts and performance. For the last decade, progress has been made in developing and adapting accounting mechanisms to these needs but significant work is still needed to tackle the problems associated with conventional accounting. Until recently, research on environmental management accounting (EMA) has concentrated on developed countries and on cost-benefit analysis of implementing individual EMA tools. Using a comparative case study design, this book seeks to redress the balance and improve the understanding of EMA in management decision-making in emerging countries, focussing specifically on South-East Asian companies. Drawing on 12 case studies, taken from a variety of industries, *Environmental Management Accounting: Case Studies of South-East Asian Companies* explores the relationship between decision situations and the motivation for, and barriers to, the application of clusters of EMA tools as well as the implementation process itself. This book will be useful to scholars interested in the environmental and sustainability management accounting research field and those considering specific approaches to EMA within emerging economies.

Environmental and Material Flow Cost Accounting Christine M. Jasch,2008-11-07 Recognizing the increasing importance of environmental issues, energy prices, material availability and efficiency and the difficulty of adequately managing these issues in traditional accounting systems, several companies all over the world have started implementing “Environmental and Material Flow Cost Accounting” (EMA and MFCA). “Environmental and Material Flow Costs Accounting” explains and updates the approach developed for the United Nations Department of Economic and Social Affairs (DSD/UNDESA) and the International Federation of Accountants (IFAC) and in addition includes experiences of several case studies and recent developments regarding EMA and MFCA in national statistics and ISO standardization.

Sustainability Accounting and Reporting Stefan Schaltegger,Martin Bennett,Roger Burritt,2006-10-30 This is the fourth in a series publishing the best contributions on environmental management accounting (EMA) from around the world. This volume brings together international examples of leading thinking and practice in this rapidly developing area. This is the most comprehensive volume to date covering theory, practice and case studies on sustainability accounting and reporting. It covers tools, frameworks, concepts as well as case studies and empirical analysis.

Environmental Accounting Ecaterina Volosin, 2008-10 Seminar paper from the year 2008 in the subject Business economics - Miscellaneous, grade: 72% (1,5), University of Glamorgan (Business School), course: Issues in Management Accounting, 20 entries in the bibliography, language: English, abstract: As an issue, the environment has been growing in significance in the minds of the community and, more recently, in the minds of business. Everyone remembers the Exxon's Valdez disaster, Shell's run-ins with Greenpeace and Nike's sweatshop scandal. Whether or not these events represented true ecological or social disasters is hotly debated, but one thing is not - they all hit the major news outlets and were public relations nightmares. To avoid such nightmares, many companies are opting for transparency not only in their financial statements, but also in their nonfinancial information, such as reports on their environmental record, social responsibility and sustainability (McCrary, 2002). In this context the aim of this paper is to examine the nature of environmental accounting and to describe how companies are responding to pressures to keep accounting records of the impact that their productive processes have on the environment.

Eco-Management Accounting Matteo Bartolomeo, M.D. Bennett, J.J. Bouma, Peter Heydkamp, Peter James, F.B. de Walle, T.J. Wolters, 2013-03-09 The ECOMAC project (Eco-management Accounting as a Tool of Environmental Management) has provided a framework for linking environmental management with management accounting. It was funded in Theme 4, 'Human Dimensions of Environmental Change' in the EU Environment and Climate Research Programme. The project is of high policy relevance by contributing to the on-going debate on eco management accounting, reporting and indicators. It is also an area needing further research. I would like to thank the research team, companies that participated as associated contractors, and the advisory panel. Jonathan Parker DG XII/D-5, European Commission Theme on Human Dimensions of Environmental Change 7 Preface The ECOMAC project This document is the final report on the project 'Eco-management accounting as a tool of environmental management (ECOMAC). This research project was conducted under the Environment and Climate Programme (Human Dimension of Environmental Change) of the European Commission (DG XII). The ECOMAC project investigated how companies are using or intend to use environmental costs and benefits figures in support of their decisions, and what they have been doing to remedy the limitations of conventional management accounting in this area. The research was largely explorative in nature, but the project also produced a structured overview of the subject and made suggestions and recommendations as to how companies could improve their own environmental accounting.

This book seeks to redress the balance and improve the understanding of the role of EMA in management decision-making in emerging countries, by drawing on twelve case studies, taken from a variety of industries, all focusing specifically on South-East Asian companies.
