## EXPLANATION OF CHANGES

### Sample Size Increase in Manufacturing Industries

The sample size of the Survey of Employment, Payrolls and Hours has been increased by 2000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees have been included in the sample with certainty. These firms were previously surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February presented in this issue have now been revised to reflect this change.

The basic survey methodology has not been changed. The reporting units continue to be divided into take-all and take-some categories as defined in the concepts and methods section of this publication. The take-all units are included in the sample each month on a permanent basis, while only a portion of the take-some units are surveyed each month. Weights are applied to the take-some units to represent what would have been obtained, under certain conditions, from a census. The manufacturing firms with 50 to 199 employees were added to the take-some portion, although rotation will not occur. This method will permit the additional units to remain in the sample for an indefinite period of time without affecting the series produced from the take-all portion of the survey.

In general, the sample increase has resulted in greater month-to-month stability of the detailed manufacturing series due to the lower sampling error (coefficient of variation). For January 1986, employment at the Canada level for the manufacturing industry increased by an estimated 21,000 employees (+ 1.3%) from the originally published estimates, while the average weekly earnings decreased very slightly (- 0.2%). At the Industrial Aggregate level, the change is not statistically significant, but as expected, many of the detailed industry levels within manufacturing showed some differences. Provincially, the largest increases in employment were in Quebec, Ontario and Alberta. Estimates for Prince Edward Island, Saskatchewan, the Yukon and the Northwest Territories were not affected.

## EXPLICATION DES CHANGEMENTS

### Augmentation de la taille de l'échantillon dans les industries manufacturières

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant de 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces entreprises était enquêté. Les chiffres déjà publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février présentés dans ce numéro ont été révisés pour refléter le changement.

La base méthodologique de l'enquête demeure la même, c'est-à-dire que l'ensemble des unités répondantes est toujours séparé en deux catégories. D'abord les unités à tirage complet sont incluses dans l'échantillon de façon permanente. La deuxième catégorie d'unités répondantes est à tirage partiel, ce qui signifie que seul une partie de l'univers est enquêtée mensuellement. Des poids sont ensuite appliqués à ces unités de façon à gonfler les résultats pour qu'ils représentent, sous certaines conditions, les résultats que nous aurions obtenus d'un recensement. Les entreprises manufacturières ayant de 50 à 199 salariés ont été ajoutées dans la portion à tirage partiel et ne seront pas touchées par la rotation. La méthode utilisée permet de garder les entreprises dans l'échantillon pour une période indéfinie sans perturber les séries à tirage complet.

De façon générale, l'augmentation de la taille de l'échantillon a eu pour effet de stabiliser les séries des industries manufacturières en diminuant l'erreur d'échantillonnage (coefficient de variation). Pour janvier 1986, le nombre total de salariés au niveau du Canada dans les industries manufacturières a augmenté approximativement de 21,000 (+ 1.3%) par rapport à l'estimation déjà publiée, alors que la rémunération hebdomadaire moyenne a légèrement diminué (- 0.2%). Au niveau de l'ensemble des activités économiques, l'impact n'est pas statistiquement significatif. Par contre, plusieurs des industries manufacturières (niveaux détaillés) montrent des différences. Au niveau provincial, les plus grandes augmentations dans le nombre de salariés se produisent au Québec, en Ontario et en Alberta. Les estimations pour l'Île-du-Prince-Édouard, la Saskatchewan, le Yukon et les Territoires du Nord-Ouest ne sont pas affectées.

Pour plus d'information sur des séries spécifiques ou pour des conseils quant au raccordement, contacter J. Beauregard, Division du travail, au (613)990-9900.

## HIGHLIGHTS

### Preliminary Estimates<sup>1</sup> (Unadjusted data) - March 1986

Preliminary data from the Survey of Employment, Payrolls and Hours for March 1986 showed an estimated 8,924.5 thousand employees at the Canada industrial aggregate<sup>2</sup> level, an increase of 34.9 thousand (0.4%) from February 1986. Employment increased in transportation, communication and other utilities while the remaining industries showed little change. Small increases were registered in all provinces and territories with the exception of Alberta which decreased slightly.

Average weekly earnings at the Canada industrial aggregate level remained virtually unchanged at \$428.36 in March from \$428.50 in February. Increases were registered in forestry and finance, insurance and real estate while the construction industry decreased. There was little change in the remaining industries. Average weekly earnings declined in Quebec while all other provinces and territories showed little or no change.

<sup>1</sup> See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

<sup>2</sup> The industrial aggregate is the sum of all industries with the exception of agriculture; fishing and trapping; religious organizations; private households and military personnel.

## FAITS SAILLANTS

### Estimations préliminaires<sup>1</sup> (chiffres non désaisonnalisés) - Mars 1986

Selon les données préliminaires tirées de l'enquête sur l'emploi, la rémunération et les heures de travail, le nombre de salariés pour l'ensemble des activités économiques<sup>2</sup> au Canada atteignait 8,924.5 milliers de personnes en mars 1986, ce qui représente une augmentation de 34.9 milliers de personnes (0.4%) entre février et mars. On a observé des augmentations dans les transports, communications et autres services publics alors que les autres industries n'ont pratiquement pas varié. De légères augmentations ont été enregistrées dans toutes les provinces et territoires à l'exception de l'Alberta qui a diminué.

La rémunération hebdomadaire moyenne pour l'ensemble des activités économiques n'a pratiquement pas varié passant de \$428.50 en février à \$428.36 en mars. Des augmentations ont été notées dans les forêts et les finances, assurances et affaires immobilières alors que la construction a enregistré une baisse. Il y a eu très peu de changements dans les autres industries. La rémunération hebdomadaire moyenne a diminué au Québec alors que les autres provinces et territoires ont démontré peu de changements.

<sup>1</sup> Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes", à la fin de cette publication.

<sup>2</sup> L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense.

## CONCEPTS AND METHODS

### Objectives

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

### Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The **firm** is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

The universe for the survey is derived from a central file of employers maintained by the Business Register and Profiling Division of Statistics Canada.

### Industrial Classification

All **firms** are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The **establishment** (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained

## CONCEPTS ET MÉTHODES

### Objectifs

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

### Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme **entreprise** désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division des profils et du registre des entreprises de Statistique Canada.

### Classement par activité économique

Toutes les **entreprises** appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un **établissement**. À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification

des activités économiques, n<sup>o</sup> 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce bulletin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

- i) Administration publique (909-951) — Comprend les établissements dont les activités ont un caractère essentiellement

ernmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

## Geographic Classification

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue No. 12-567.

## Definitions

### 1. Reference Period

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes**, unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

### 2. Employee

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

gouvernemental, et les organismes auxiliaires assurant les services internes de l'Etat. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

## Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", numéro 12-567 au catalogue.

## Définitions

### 1. Période de référence

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève**, d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois d'enquête, les données qui en découlent reflètent l'état de grève).

### 2. Salarié

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada, military personnel and persons providing services to an establishment on a contract basis. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

- a) **Employees paid by the hour**  
Any employee whose basic wage is expressed as an hourly rate.
- b) **Salaried Employees**  
Any employee whose basic remuneration is a fixed amount for a period of at least one week.
- c) **Other Employees**  
Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.
- d) **Non-teaching Staff**  
All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)
- e) **Teaching Staff**  
Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.
- f) **Supply or Substitute Teachers**  
Teachers who are called in to teach whenever their services are needed either to augment

Le terme "salariés" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada, le personnel militaire et les personnes fournissant des services à un établissement sur une base forfaitaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

- a) **Salariés rémunérés à l'heure**  
Tout salarié dont la rémunération de base est calculée selon un taux horaire.
- b) **Employés**  
Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.
- c) **Autres salariés**  
Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.
- d) **Personnel non enseignant**  
Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économiste, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.
- e) **Personnel enseignant**  
Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.
- f) **Suppléants ou remplaçants**  
Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le

the existing staff or as a short-term replacement for a full-time or part-time teacher.

personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

### 3. Earnings

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

#### a) Gross Pay

Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings and payments to persons absent with pay in the survey reference week.

#### b) Overtime Pay

All pay received for the number of hours worked in excess of the standard workday or workweek.

### 4. Hours

#### a) Total hours paid

All hours worked, including overtime hours, plus hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

#### b) Overtime Hours

The total hours for which overtime was paid. These represent the hours worked.

### 5. Paid Absence

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

### 6. Standard Workweek

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

### 3. Gains

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

#### a) Rémunération brute

Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps et la rémunération des absences payées dans la semaine de référence de l'enquête.

#### b) Rémunération du temps supplémentaire

Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

### 4. Heures

#### a) Nombre total d'heures payées

Ensemble des heures travaillées, y compris les heures supplémentaires, plus les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

#### b) Heures supplémentaires

Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

### 5. Absence payée

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

### 6. Semaine normale de travail

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

## 7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

- a) All firms or organizations with 200 or more employees;
- b) All firms with more than one reporting unit;
- c) Firms which report their survey data on computer listings rather than on the standard questionnaire;
- d) Units of government departments and crown corporations;
- e) Units belonging to elementary and secondary schools;
- f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

## Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

## Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into **take-all** and **take-some** categories as defined earlier under Definitions.

## 7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

- a) toutes les entreprises de 200 salariés ou plus;
- b) toutes les entreprises ayant plus d'une unité déclarante;
- c) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;
- d) unités des services gouvernementaux et des sociétés de la couronne;
- e) unités propres aux écoles primaires et secondaires;
- f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

## Methodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

## Stratification

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à **tirage complet** et les unités à **tirage partiel**, au sens que nous avons précisé dans la section "Définitions".

## Sample allocation and selection

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units, then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

## Sample rotation

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning

## Répartition et choix de l'échantillon

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunérés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionnellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est un.

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

## Rotation de l'échantillon

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut

with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

#### Data edit and correction

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

#### Follow-up

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large nonrespondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

#### Imputation

Imputation for nonrespondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each nonrespondent.

For the nonresponding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

#### Vérification des données et correction

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent incohérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

#### Méthode de suivi

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

#### Imputation

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

## Estimates

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-provincial areas are also produced, treating the sub-province as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

## Reliability of the estimates

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

**Sampling errors** occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

**Non-sampling errors** are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

## Indicators of sampling error

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or coefficient of variation.

## Estimations

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations susdites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, considérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

## Fiabilité des estimations

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les **erreurs d'échantillonnage** proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les **erreurs non dues à l'échantillonnage** ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

## Indicateurs des erreurs d'échantillonnage

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée **écart-type** d'une estimation de sondage. Lorsque l'écart-type est exprimé en pourcentage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation.

Alphabetic symbols of the coefficient of variation are used in this publication (see Tables A to F at the end of this explanatory note) to give an indication of the reliability of the estimates and are based on a 12-month average of the coefficients of variation. The ranges of the coefficients of variation and their corresponding alphabetic indicator are given in the following table.

**ALPHABETIC INDICATORS OF COEFFICIENT OF VARIATION**

Alphabetic Indicator	Range of Coefficient of Variation Percent
A	0 - 1.0
B	1.1 - 2.5
C	2.6 - 5.0
D	5.1 - 10.0
E	10.1 - 15.0
F	15.1 - 25.0
G	> 25.0

The sample estimate and its standard error (derived from the coefficient of variation) may be used to construct an interval within which the unknown census value is expected to be contained with a prescribed confidence. The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. If intervals from two standard errors below the estimate to two standard errors above the estimate are constructed using each of the above estimates, then approximately 19 out of 20 of the intervals would include the census value. Such an interval is called a 95 percent confidence interval. For example, let the estimate under consideration be the total number of paid employees at Canada level in Construction and say it is 450,000 employees. If the estimate has a reliability indicator A, then assuming that the coefficient of variation of the estimate is 1%, the standard error of the estimate would be 4,500 employees. Therefore, in this case, one can say with 95% confidence that the census value of total paid employees in Construction is included in the interval 441,000 to 459,000 employees.

In general, the estimates of monthly changes are expected to be more reliable than the estimates of levels due to the large overlap of reporting units in the monthly samples and the high correlation between the reported values for two consecutive months.

Dans la présente publication, nous utilisons des symboles littéraux de coefficient de variation (voir tableaux A à F à la fin de cette note explicative), pour indiquer le degré de fiabilité des estimations; cette symbolisation repose sur la moyenne des coefficients de variation de 12 mois. Les intervalles de confiance des coefficients de variation et les symboles correspondants sont précisés dans le tableau suivant.

**INDICATEURS LITTÉRAUX DU COEFFICIENT DE VARIATION**

Indicateur littéral	Intervalle de confiance du coefficient de variation en pourcentage
A	0 - 1.0
B	1.1 - 2.5
C	2.6 - 5.0
D	5.1 - 10.0
E	10.1 - 15.0
F	15.1 - 25.0
G	> 25.0

L'estimation de l'échantillon et son écart-type (établi d'après le coefficient de variation) peuvent servir à construire un intervalle à l'intérieur duquel s'inscrira, sous réserve d'une limite de confiance prédéterminée, la valeur inconnue que l'on obtiendrait par recensement. L'échantillon sur lequel s'appuie notre enquête n'est qu'un des multiples fragments de même taille que nous aurions pu choisir en utilisant le même plan. Les estimations tirées d'autres échantillons du même univers diffèrent les unes des autres. Si l'on construisait des intervalles allant de deux écarts-types sous l'estimation à deux écarts-types au-dessus de l'estimation, en utilisant chacune des estimations possibles (selon l'échantillon choisi), environ 19 intervalles sur 20 contiendraient alors la valeur que donnerait un recensement. Ce genre d'intervalle se nomme intervalle de confiance à 95%. Prenons par exemple comme estimation le nombre total de salariés de la construction pour l'ensemble du Canada, et supposons que ce nombre soit 450,000. Si l'indicateur de fiabilité de cette estimation est A, et si son coefficient de variation s'établit à 1%, alors l'écart-type de l'estimation sera de 4,500 salariés. Dans ce cas, on peut donc dire avec 95% de confiance que le nombre total de salariés de la construction, obtenu par recensement, se situe dans l'intervalle 441,000 à 459,000 salariés.

En général, on s'attend à ce que les estimations des variations mensuelles soient plus fiables que les estimations de niveaux, par suite de l'ample chevauchement des unités déclarantes au sein des échantillons mensuels, et de la forte corrélation qui existe entre les valeurs déclarées pour deux mois consécutifs.

## Statistical Presentation

### 1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

### 2. Data Release

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

### 3. Rounding

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

### 4. Averages

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

## Présentation statistique

### 1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations **préliminaires** et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui précède le mois le plus récent; il s'agit d'estimations **révisées** qui prennent appui sur un taux de réponse plus élevé (environ 90%).

### 2. Diffusion des données

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'agrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

### 3. Arrondissement

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

### 4. Moyennes

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

#### 5. Unpublished Data

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates is lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

#### 6. CANSIM

Data published in this report are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the CANSIM matrix numbers, the CANSIM series numbers and the types of survey estimates are presented at the end of this explanatory text (see Tables I to V) to provide the user with an easy and quick link to the CANSIM system.

Generally speaking, the CANSIM matrix number identifies a type of survey estimates for a particular geographic area, while the CANSIM series number represents an industrial level. Owing to the different types of data aggregations (all units, take-all units, take-some units) and to the large number of survey estimate types (number of employees, average hourly earnings of hourly-rated employees, etc.), the user will have to follow the steps given hereafter to select the proper CANSIM matrix and series numbers.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

#### 5. Données non publiées

Nous établissons, aux niveaux Industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité soit plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

#### 6. CANSIM

Les données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinaire dans CANSIM (Système canadien d'information socio-économique).

Les intéressés trouveront à la fin de ces notes explicatives des tableaux indiquant les numéros des matrices CANSIM, les numéros des séries CANSIM et les types d'estimations de l'enquête (voir tableaux I à V). Ces tableaux fournissent à l'utilisateur un moyen d'accès facile et rapide au système CANSIM.

De façon générale, le numéro de matrice CANSIM désigne un type d'estimation de l'enquête pour une région géographique particulière, tandis qu'un numéro de série CANSIM désigne un niveau industriel. En raison de la multiplicité des types d'agrégation (ensemble des unités, unités à tirage complet, unités à tirage partiel) et des nombreux types d'estimations de l'enquête (nombre de salariés, salaires horaires moyens des salariés rémunérés à l'heure, etc.), l'utilisateur devra franchir les étapes suivantes pour choisir les bons numéros de matrice et de série CANSIM.

- a) Determine the type of tabulated information needed (this will define the value of "x" for the CANSIM series number of Table II):
- i) Aggregation of all survey units has the value 1,
  - ii) Aggregation of take-all units has the value 2 and
  - iii) Aggregation of take-some units has the value 3.
- b) Determine the type of survey estimates required; this will provide the value of "y" for the CANSIM series number. This value is obtained by consulting Table I which lists the 20 types of survey estimates; the number of salaried employees, for example, constitutes type 2.
- c) Determine the industrial level needed and refer to the Industry Code column of the CANSIM series number Table II to find the rest of the series number (e.g. Industry Code 031 has series number **x.y.1.1.1**).
- d) Determine the geographical level required and refer to the CANSIM matrix number tables (Tables III to V) to select the appropriate matrix number.

A specific example would be as follows. The "average weekly overtime earnings of salaried employees" for "all survey units" is needed for the Ontario total manufacturing. The CANSIM series number will be 1.13.1.1.3 according to:

- i) The "x" value of 1 for the "All survey units" aggregation,
- ii) The "y" value of 13 for the type of survey estimates and
- iii) The tail-end of the series number 1.1.3 for the manufacturing Industry Code 101-399.

The CANSIM matrix number will be 8375 because the type of estimates 13 is required for Ontario.

It should be noted that only two types of survey estimates are available for the Census Agglomerations (i.e. estimates 01: total number of employees, and 05: average weekly earnings (including overtime) of all employees), while twenty types of estimates are available for Canada, the provinces and the Census Metropolitan Areas.

For further information on CANSIM call (613) 991-1150 or write CANSIM Division, Statistics Canada, R.H. Coats BLDG., Ottawa, Ontario, K1A 0T6.

## 7. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

- a) Déterminer le type désiré de totalisation parmi les cas suivants (cette opération définira la valeur de "x" pour le numéro de série CANSIM au tableau II):
- i) ensemble des unités de l'enquête: vaut 1,
  - ii) unités à tirage complet: vaut 2 et
  - iii) unités à tirage partiel: vaut 3.
- b) Déterminer le type requis d'estimations de l'enquête; cette opération fixera la valeur de "y" pour le numéro de série CANSIM. On obtient cette valeur en consultant le tableau I, qui contient la liste des 20 types d'estimations de l'enquête; le type "employés", par exemple, a la valeur 2.
- c) Déterminer le niveau industriel désiré et utiliser la colonne "code des industries" du tableau II des numéros de série CANSIM pour trouver les autres chiffres du numéro de série (par ex. le code d'industrie 031 possède le numéro de série **x.y.1.1.1**).
- d) Déterminer le niveau géographique requis et utiliser les tableaux de numéros de matrice CANSIM (Tableaux III à V) pour choisir le numéro de matrice approprié.

Voici un exemple. Supposons que l'on veuille connaître la "rémunération hebdomadaire moyenne du surtemps des employés" de "l'ensemble des unités de l'enquête" pour les manufactures de l'Ontario. Le numéro de série CANSIM sera 1.13.1.1.3, puisque:

- i) la valeur de "x" pour le groupe "ensemble des unités de l'enquête" est 1,
- ii) la valeur de "y" pour le type d'estimation est 13, et
- iii) la fin du numéro de série pour le "code d'industrie" des manufactures 101-399 est 1.1.3.

Le numéro de matrice CANSIM sera 8375, car le type d'estimation 13 s'applique à l'Ontario.

Notons qu'il n'existe que deux types d'estimations au niveau des agglomérations de recensement (i.e. les estimations 01: nombre total des salariés, et 05: salaires hebdomadaires moyens (y compris le surtemps) pour l'ensemble des salariés), alors qu'il y a vingt types d'estimations disponibles aux niveaux du Canada, des provinces et des régions métropolitaines.

Pour de plus amples informations concernant CANSIM, téléphoner à (613) 991-1150 ou écrire à Division CANSIM, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6.

An invaluable publication for business planners, policy makers, the media, social scientists and members of the public interested in the future of Canada's population.

ISBN 0-660-52718-9, Catalogue No. 91-520 (Occasional), 1985, 346 pp, \$40.00 in Canada, \$50.00 elsewhere.
