# TRAVELS IN TUNISIA.

---

## CHAPTER I. GENERAL REMARKS.

TUNISIA A GOOD FIELD FOR STUDY—DIFFICULTIES OF TRAVELLING—  
THE 'COMPAGNIE TRANSATLANTIQUE'—INCONVENIENCE OF PORTS  
— BAD ROADS — WANT OF ACCOMMODATION — NO FOOD — NO  
AMUSEMENTS—SCENERY—INFORMATION DIFFICULT TO OBTAIN—A  
TUNISIAN TOWN DESCRIBED—CHARACTER OF THE ARABS—CRUELTY  
TO ANIMALS—RESULTS OF ARAB RULE IN NORTH AFRICA.

**T**UNISIA offers a wide field of study to the historian, the geologist, the geographer, and, above all, to the archæologist;\* for, in spite of the numerous books which have been written (a list of the principal works will be found at the end of this volume), much still remains in every branch to reward the explorer. The traveller must, however, have ample time at his disposal, and be prepared to face difficulties, hardships, and privations. To the ordinary tourist—to him who travels for his pleasure only—Tunisia cannot be recommended.

---

\* Lieut.-Col. Sir R. L. Playfair remarks: 'In archæology immense strides have been made. Tunis was one of the few places in the world where an almost unexplored field remained for the archæologist. It may be said to be one vast museum—certainly a perfect library of epigraphical treasure. Even the ancient names of places have hardly changed, the modern nomenclature being simply a corruption of the Latin words.

1 'Great Roman roads radiated from Carthage, and even an immense.

The communications are slow, defective, frequently impossible. The 'Compagnie Transatlantique,' whose magnificent fleet of British-built steamers, well manned and well appointed, sweep the coasts of North Africa from Oran to Algiers, Algiers to Tunis, Tunis to Djerba, are favoured with so little traffic that they are forced to combine the postal, passenger, and goods services. This necessitates remaining several hours (sometimes a whole day) before the same port. The harbours of Tunisia are too shallow to admit vessels of heavy tonnage, so that large steamers are obliged to anchor from two to four miles from the shore, making it necessary to land in small boats—at all times inconvenient, and in bad weather impossible. The only railways in the country are the one connecting Tunis with the Algerian ports of Bône and Philippeville, a small local line between Tunis and its port Gouletta; and another between Tunis and Hammamet, a watering-place a few miles south. In the interior there are neither roads nor bridges; vehicles are consequently not everywhere practicable, and travelling, even on horseback, is difficult and dangerous after heavy rains. Accommodation is even less satisfactory. Excepting the two chief towns (Tunis and Soussa), which are provided with hotels of an European character, there is in reality no accommo-

---

series of secondary ones can still in many instances be traced by military columns, testifying to the ancient prosperity of the country and to the genius of its occupants, whether Punic or Roman. Every town on the course of these roads had its temples, basilica, palaces, forum, and thermæ, its theatre and amphitheatre. Triumphal arches and city gates are still found in all their classic grandeur, and at every step the traveller meets Roman farms of almost monumental character. Near the cities are extensive cemeteries and magnificent mausolea, and even sepulchres of the so-called Megalithic type.'—*Consular Reports*, No. 3 (1886), p. 29.

dation properly so called. In towns which appear on maps in large type, it is difficult to obtain food or lodging, and the *fondouks*, or country inns, which are occasionally met with in the interior, are the most miserable establishments imaginable—dirty and full of vermin; on a par with the rest-houses of North China, but in no way comparable with the *dák-banglas* of India. As food of any kind is seldom to be obtained, and water is nearly always undrinkable, the traveller should carry with him provisions, bedding, and, in doubtful weather, a tent.

In so incommodious a country amusements can scarcely be expected. In Tunis, it is true, the Italian theatre of a very ordinary description is usually open during the winter, and a French company of moderate pretensions gives occasional performances; but visitors hailing from the capitals of Europe or America are not likely to find in them either pleasure or recreation. The Arabs have no theatre of their own, and since the French occupation performances in the native 'cafés'—singing or dancing—have almost ceased.

The north and west of Tunisia are mountainous, but scenery of the interior is, as a rule, unlovely, consisting of vast plains—treeless, waterless, uncultivated—without even a habitation to relieve the monotony of the landscape. The hills which intersect these enormous plateaus are usually rugged, bare, unwooded; but some of the passes, especially those towards the northern frontier, are well timbered and equal at times, though they never surpass in sublimity, the celebrated Châbet of Algeria, between Bougie and Setif.

A source of constant vexation is the difficulty, or rather impossibility, of obtaining reliable information, not concerning ruins, curiosities, out-of-the-way things, but about every-day concerns. This, too, in a country for

which no special guide-book exists, and which is without a series of reliable maps, is exceedingly trying to the traveller's patience. There is a French guide-book, entitled *L'Itinéraire de Piesse*, published in 1878. Not unfrequently had we to undergo such unsatisfactory conversation as the following:—

*Q.* How far is it to X——?

*A.* A long way.

*Q.* Shall we be able to reach it before sundown?

*A.* There is no moon to-night.

*Q.* This is immaterial if we arrive before sunset.

*A.* If you had started very early in the morning you would have been there in good time. Your horses travel slowly.

*Q.* Well, we left B—— at eight o'clock this morning, and we have just arrived here; so you can judge the pace at which we travel.

*A.* The roads are bad.

*Q.* Please to tell us the exact distance to X——.

*A.* It is a long way.

*Q.* How many 'kilomètres' are there from here to X——?

A pause. The Arab under examination looks graver than usual, and our interpreter puts an end to the conversation by informing us that Arabs know nothing about kilomètres.

Most of the towns of Tunisia (apart from the picturesqueness which the colouring of every Oriental town invariably imparts) offer little attraction, either on account of their general plan, the arrangement of their streets, or the architecture of their buildings, whether public or private. A certain sameness prevails everywhere. A village resembles a city, except that it is less well built and maintained; or rather, a city is nothing

---

more than an overgrown village. An Arab town of these parts may be described in few words:—low, brick-built, whitewashed houses, consisting generally of one storey, with arched doorways more or less pretentious, and barred windows, planned externally without any attempt at symmetry—turning their backs, as it were, on narrow, tortuous, ill-paved streets, in which all kinds of ordure and objectionable matter are deposited. In the midst is a mosque of one uniform pattern, differing only in size and extent from that of some other town. On higher ground stands the Military Governor's residence, the *Kasba*, or Citadel. The whole is enclosed with a whitewashed rubble wall, crenelated, pierced for musketry, and buttressed at intervals, pretty at a distance, much less so in close proximity, and quite useless for purposes of defence. Such is the ordinary Tunisian town, almost devoid of architectural pretensions, if we except the Roman shafts of marble or stone that are conspicuous at corners of the streets, the support and mainstay of ill-constructed buildings. Nor are the inhabitants more interesting or less uniform than their dwelling-places. Their character has been differently summed up by various writers.\*

---

\* To cite but two authorities:—

Thomas Macgill (*Account of Tunis*, 1816, p. 37) says: 'They are proud, ignorant, cunning, full of deceit, avaricious, and ungrateful.' To this stricture, severe as it is, indolence, apathy and cruelty, must yet be added.

'The Tunisians, or Moors, are for the most part religious, but without any fanaticism; their natural disposition is grave, dignified, affable, and corrupted as they may be by the usages of trade, they are generally more honest than their Israelitish and Christian rivals. Few of them, except perhaps among the merchant class, avail themselves of the example of Mahomet, to have more than one wife at a time. By their industry, their taste, their commercial intelligence, in short, by

As far as our own experience goes, the Arab in the interior of the country is courteous in the extreme, hospitable, and obliging—good qualities, nevertheless, which do not preclude his readiness to cut the ‘dog’s’ throat, were he not restrained by the severe penalties of the law. Cruel he undoubtedly is, and callous to the sufferings of his animals. From this one may not unjustly infer that obnoxious human beings might meet with little commiseration at his hands. The originator of that poetical myth of the Arab and his horse, which has done duty so often in the picture-books of our youth, must have been endowed with a vivid imagination, or, more probably, could have had but little acquaintance with the people themselves. Rare is it to meet with an animal that does not bear marks of mutilation or ill-treatment—an ass with slit nostrils,\* a mule with dilapidated ears, a cow whose tail has been broken by twisting, a dog or a cat with ears and tail docked, or a horse whose skin indicates by its scars punishment more severe than could be inflicted by a stick. The beasts are almost always overloaded, and the trappings and harness—bits, saddles, or breechings— are simply instruments of torture. On remonstrating once with an Arab upon this cruel treatment, he replied, with a stoicism not to be surpassed, ‘We have suffered, why should not they?’

---

their comparative instruction and their literary culture, but not by their morality, the Tunisians are considered superior to all other Moors.’—*Nouvelle Géographie Universelle*, Reclus, XI. 196.

\* It is the rule, not the exception, for donkeys to have their nostrils slit. Frequently did we inquire the reason of this mutilation, without ever obtaining a satisfactory explanation. One said it was to prevent their braying, which it certainly does not do; another, that it enabled them to breathe more freely, and consequently to travel faster. Probably custom, the origin of which has long been forgotten, is the sole reason of this absurd and barbarous practice.

Little as we may sympathise in the occupation of Tunisia by the French, whose half-century of rule in Algeria is a doubtful success, no pity can be felt for the Arabs, ruler or subject, who have now to submit to a foreign yoke. For more than a thousand years have they possessed one of the richest and most beautiful lands of the world, under a climate little short of perfection. In the course of centuries they have slaughtered and driven out more people than at present inhabit the entire country; they have neglected the rivers and watercourses, choked up and befouled the cisterns and wells, cut down the forests without replanting,\* allowed roads to disappear and bridges to decay, mutilated the monuments, degrading and misusing the fragments; permitted the soil to go out of cultivation—in short, they have converted a land of plenty into a desert, a fertile garden into a wilderness. Moreover, those who have held for long centuries

---

\* The following remarks of M. Largeau concerning the Desert of Sahara are equally applicable to Tunisia:—‘The decline of this country,’ he writes, ‘is due to the disappearance of those waters which used formerly to fertilise it. But what has caused these waters to disappear? How is it that these immense rivers, fountains of moisture, reservoirs of freshness, sources of vegetation, have dried up? I attribute this drought to the destruction of the forests (*déboisement*), and I find the principal cause of this destruction in the sanguinary struggles of the nomad shepherds of different tribes, who, coming from the north and north-east, invaded the Sahara desert, destroying and driving before them their predecessors. . . . All these transmigrations, all these substitutions of races, were not made without resistance, bloody combats, and cruel massacres; and in a country where rain was probably a rare occurrence, where, perhaps, the earth was not made productive except by irrigation, massacre or departure of the agricultural population would naturally carry with it the complete ruin of the soil. Admitting that these wars did not entirely destroy the forests of the country, the shepherds completed the work. Flocks are the wealth of wandering tribes; but for flocks it is necessary to have prairies, and not woods, which have, in addition, the inconvenience

the destiny of the country in their hands, have neglected their people, squandered their treasure; and finally, with impending bankruptcy, sold the land of their forefathers to the detested infidel. For all this weight of desecration, destruction, and fanaticism, there is no counterpoise. Not a single work of literature worth recording, no new development of science or industry, nor any great monument of art or utility, will be handed down to future generations as evidence of a nation possessing either culture or progress.

of sheltering wild beasts. It is a remarkable fact that the countries overrun at the present time by shepherds, particularly by Arab shepherds, present the same aspect of aridity and desolation. And, nevertheless, it is proved that the greater part of those districts were at one time marvellously fertile. The Sahara, then, having had its trees cut down, the rains have become still rarer, and the surface soil, swept by the winds, has left bare a sedimentary carapace, through which the waters of the springs and the rain filter, in order to form subterranean rivers, which the well-sinkers of Oued-Rirh bring back to the surface for the irrigation of their oasis. It is not necessary to go to Africa to study this phenomenon, it is found in a lesser degree in several parts of France, where it is also due to the devastation of the mountain forests, and in a great many parts boring has proved the existence of veritable subterranean rivers. By thoroughly examining the shores one would possibly find the spot where these rivers join the sea.'—*Voyage au Sahara algérien.*

## CHAPTER II.

### LONDON TO TUNIS.

*October 28th to 31st.*

THE START—MARSEILLES—ON BOARD THE ‘VILLE DE ROME’—THE PLEASANT CITY OF BÔNE—IN THE RAILWAY CAR—VINEYARDS—A JOURNEY IN A DILIGENCE — THE SERPENTINE MEDJERDAH — TUNIS REACHED.

**L**EAVING London by the mail train on the morning of Wednesday, October 28th, we reached Paris in time for the *Rapide* of the same evening, arriving at Marseilles on the following morning. A *Bouillabaisse* at the *Réserve*, a pleasant walk along the *Corniche*, and a saunter down the *Cannebière*, agreeably occupied our time until, at 5 p.m. precisely, the steamer, *Ville de Rome* (of the ‘Compagnie Transatlantique’) left her moorings direct for Bône. We had selected this route rather than proceed to Tunis direct, in order to revisit scenes that, on a former journey, we had passed under less favourable circumstances, the time occupied being about eight hours longer than by the direct route.

At 2 a.m., October 31st, we entered the harbour, and were pleased to find on rising that we could step from the vessel on to the quay.

Bône is one of the most pleasant towns in Algeria. Second only to Algiers in extent and population, it is

in some respects even more desirable as a place of residence. The harbour, as already noticed, is very convenient, the largest vessels being able to enter at all hours and seasons. The town is purely French—in the arrangement of the streets, the construction of the houses, and the contents of the shops. Were it not for the tropical vegetation and the native costumes, one might suppose oneself still on the other side of the Mediterranean. The wide, handsome street, which runs from the harbour through the centre of the town, reminding one somewhat of the *Cannebière* at Marseilles, is arcaded on one side and lined with fine stone-built houses of good design. Here are the principal shops and 'cafés,' and at the upper end is a charming garden, in which are palms and other tropical trees. Beyond this, on rising ground, stands the modern Roman Catholic Church (quasi-Byzantine), a structure grotesque in outline, and presenting the appearance of a badly restored ruin.

Outside the town, in the same direction, the road is crossed by the stately arches of a Roman aqueduct, partially restored, although no longer in use. A short distance beyond is the public garden, remarkable for its avenues of ancient palms, and a collection of carved and inscribed stones of Roman origin.

The population of Bône is almost entirely French; there are few Arabs, and fewer Europeans of other nationalities.

Our acquaintance with Bône was begun on a former, and renewed on a subsequent occasion; the present visit was but a passing one. Our destination was Tunis, to which city there is but one direct train daily from Bône, leaving at 5 a.m. The speed at which the train travels is not rapid,—the journey, a distance of 355

'kilomètres' (224 miles), occupying fifteen hours.\* The scenery throughout is picturesque. As far as Souk-Ahras, the last town on the Algerian frontier, the line runs through vineyards and cork forests, then winds among majestic hills clothed with oaks and occasional clumps of eucalyptus, with plateaus of grass not unlike our own common lands. On reaching a lower level, vines, in greater luxuriance, cover the hillsides. The growers' houses are square, white-washed buildings, with flat roofs, some of the more important being fortified and loopholed. This is true of many railway stations. Excepting the houses in the vineyards, there are neither homesteads nor villages. From Souk-Ahras to Ghardimaou the scenery is of a different character, less majestic, entirely uncultivated, but more picturesque. The line follows the course of the *Oued* Medjerdah, the ancient Bagradas, and winding round the hills, now boldly crosses it, now tunnels through a hill only to meet the constantly winding stream at another of its bends. The hills are by no means barren, but generally green with arbutus, olives, corks, or dwarf-oaks. Looking down upon the river and the now almost disused road, well did we remember the unpleasantness of a previous journey in the diligence through the same district. It was on the 28th November, 1883, just before the completion of the railway connecting

\* The following are the names of the stations on the Tunisian Railway between Bône and Tunis, the distances being from Bône:—

Kilomètres.		Kilomètres.

the Algerian and Tunisian lines. A more disagreeable day's travelling it is not easy to imagine. Rain had been falling for a couple of days previously, rendering both road and river difficult, converting the sandy track of the one into a mass of mud, and the dry bed of the other into a swelling torrent. Although warned against undertaking so hazardous a journey (one of the last made by the diligence), we nevertheless started at daylight. The track used by vehicles follows the valley along the banks of the Medjerdah, winding through the pass at different levels and crossing the river at short intervals.

Twenty-seven times in the course of the day did the five horses harnessed to our rough cart, that served as a diligence, dash down the ravines, and, plunging into the stream, carry us over by sheer force. Bridges there were none. The fords were visible as a confused mass of huge stones, and as the vehicle jolted over them, one felt that body and limbs were about to part company. We were going with the stream, and consequently every passage of the river became more hazardous. Never shall we forget the last crossing. It was pitch dark ; but the driver (a Maltese,—as usual in these parts) fortunately knew the track well enough. Standing up and placing his little lantern in his cap, he gave a whoop and a crack of the whip and, lashing the tired animals into fury, he swept us into the water, which rose above the body of the cart, and—thank goodness!—in a moment we were over. This was not all our trouble. Four times we had to alight, and, standing in mud more than ankle deep, had to lift the cart out of the slush ; and once with pickaxe and shovel (which the driver had with him), and some branches of trees, we found ourselves under the necessity of excavating the horses and digging

out the carriage. It was pleasant after such a journey to reach our night's quarters at Ghardimaou, although it was only a rough shanty on the slopes of a mud hill.

Eastward of Ghardimaou the scenery again changes entirely, and the railway crosses a vast plain, through which the Medjerdah, almost lost to view, continues to meander between deep yellow banks. Native homesteads there are none; houses of an European character are few; but here and there the landscape is dotted with white *koubbas*, or tombs of saints, and relieved by the black *gourbies*, or tents of Arab encampments. Nevertheless flocks of sheep and goats intermixed are grazing among the stunted bushes, while strings of camels wend their way silently over the great plain.

Daylight had departed before we approached Tunis, and the objects of interest through which the line passes—the Bardo Palace, the gardens of Manouba, the aqueducts, the city walls—were but dimly seen. At 8 p.m. the train drew up at the terminus of Tunis.

## CHAPTER III.

### TUNIS.

*November 29th to December 4th, 1884. October 31st to November 8th,  
and December 1st to December 5th, 1885.*

THE 'BURNOUS OF THE PROPHET'—VIEW OF THE CITY—WHITEWASH  
—MIXED POPULATION—THE STREETS—THE KASBA—THE MOSQUES.

**O**F all the white cities of Tunisia no one is whiter than Tunis, whence its appellation of *The Burnous of the Prophet*, a title as appropriate as it is poetic. To gaze upon this bewildering mass of snow-white habitations from the Kasba walls or the terraced roof of the Dar-el-Bey, when the stillness of the air is broken by the voices of *muezzins* calling to evening prayer, awakens feelings of solemnity that words would fail to express. From the city, spread out like a sheet, the eye wanders seawards over the shallow lake Borghaz, or el-Bahira, 'the little sea,' as the Arabs call it, on one bank of which Tunis is built. Immediately in front is the modern port Gouletta, with its busy quays and shipping; to the right, the village of Radès, pleasantly situated on an olive-clad hill; to the left, the rising ground that marks the site of ancient Carthage, backed by the headland and whitened houses of Sidi-bou-said. Turning inland, the saltmarsh of Sedjoui skirts the southern walls of Tunis, and framing the horizon is one long succession of mountains and hills, vying with each other in beauty of outline and culminating in the rugged peak of Zaghouan. Nearer the city walls, to the right,

are the Bardo Palace and the Gardens of Manouba, and beyond is the graceful outline of *Djebel Merkey*. All this, when viewed through the lucid atmosphere and touched with the gorgeous colouring of this favoured clime, combines to make a fairy picture difficult to rival, never to be forgotten.

The whiteness of Tunis, as of every city in the Beylik (for all are white), beautiful at a distance and picturesque as an object in the landscape, loses its charm on closer inspection. If economical in most things, in whitewash the Arab is extravagant. He applies it without discrimination—from the mosque to the koubba, from the palace to the hovel. Bricks or mud, marble or stone, iron or lead, all pass under the same brush; inscriptions are choked up, tracery is hidden, and carved capitals of beautiful design are thus made to look like stucco imitations.

Quitting our eminence, and passing rapidly through the bazaars, to which we shall have frequent opportunity of returning, we saunter for a while about the Place de la Bourse, a small square at the bottom of the town and close to the walls, where stands the British Consulate. This is the central spot of Tunis, to which every street converges. Passing out of Bab-el-Bahar, the principal gate of the city, we have before us the wide Boulevard de la Marine, laid out with a view to extension as far as the lake Bahira. On this boulevard are the Post Office, Hotel, Bank, State Tobacco Factory, Roman Catholic Church, and European Cafés. It is the lounge of French officers and better-class Europeans generally. To the left is the quarter occupied by Maltese and Italians; beyond is that assigned to the Jews—as dirty as it is interesting, and not separated by any wall or boundary, as in many Eastern towns. The natives—

Moors or Arabs—dwell, for the most part, in the upper part of the town, where the Dar-el-Bey is situate, the bazaars being round about it. They have also formed suburbs about the many gates of the city, the principal resort of natives from the interior, and consequently very curious, animated, and interesting.

Few cities of the East (not even Cairo, Constantinople, or Bombay) surpass Tunis in varieties of type or costume :—the sleek, fair-skinned Tunisian of Moorish descent, well dressed, in coloured slippers trodden down at the heels, white stockings or socks, and *djebba*, or coat of some bright and delicate hue; in Fez cap, around which is wound a turban, either white or coloured—red indicating that the wearer has performed the Mecca pilgrimage, and is henceforth entitled to be called *Hadji*; green denoting a *Scherif*, or descendant of the Prophet, either in the male or female line; the Mameluke of Greek or Syrian origin, scarcely to be distinguished from the native of Tunis; the negro and half-caste remnants of slavery; the native soldier, miserably clad in semi-European regimentals, with red Fez cap ornamented with a gilt star; the Jew, distinguishable only by a dark blue or black turban and by his manly bearing; the Algerine, more martial and stalwart than the Tunisian; the Maltese, the Sicilian, and the Spaniard, whose nationality is nearly extinct; to these must be added the French soldiery, now an important item in the population of Tunis. Then there are the civilian French, such as ‘coiffeurs,’ café-keepers, or owners of ‘Magasins de Nouveautés.’ The one nation not represented is England; the Englishman proper, to be met with everywhere else in the East, being here conspicuous by his absence.

Such is briefly the outward appearance of the popu-

lation of Tunis, numbering at present about 130,000 souls. Considering its former importance, its remarkable history, its existence even prior to Carthage, one might expect to find in the capital of Tunisia more monuments of interest to the general traveller as well as to the antiquary. Apart from the streets themselves, with their picturesque population and gay surroundings, few of the buildings, public or private, offer in their exterior any striking architectural beauties. The streets, however, the best of which are in the vicinity of the Kasba and the Dar-el-Bey, inhabited mostly by Mamelukes, high functionaries and wealthy Moors, are a never-failing source of interest and delight—irregular, constructed apparently without any fixed plans, with Roman shafts of marble or stone built into, or protruding from, the rough walls, with abrupt twists and unexpected bends, leading up and down hill, now into a blind alley, now into a quaint little square, and anon offering a vista under arches, the curves of which intersect each other until the eye becomes dazed by the intricacies of the perspective—without names, without numbers—a labyrinth, in fact, in which the wanderer constantly misses his way, but to which he never tires of returning. Such are the streets of Tunis. Of the *Souks*, or passages in which the shops are situated, mention will be made in another chapter.

The culmination of this maze is the Kasba, or fortress and prison combined, once an important stronghold, now little more than a mass of ruins, in course of part-reconstruction by the French. It is entered on the side of the town through a square, the most extensive open place of which Tunis can boast, and delightful by reason of its trees and colonnades. One side of the square forms the façade of the Dar-el-Bey. The entrance to the palace,

through which the reader will accompany us later on, is from a street in the town.

Admission to the Mosques of Tunis being denied to all but Mohammedans, one must be satisfied with such glimpses as can occasionally be obtained through an open door. The very steps are forbidden to the tread of an unbeliever. Any attempt, therefore, at description of their interiors would be a departure from the rule which we have imposed upon ourselves. The most important, called Djamäa Zeitouna, or Mosque of the Olive-tree, situated at the point where the two streets leading from the Place de la Bourse to the souks terminate, is the most frequented. The court and prayer-chamber are supported by a number of shafts with marble capitals, mostly of Roman origin, and the main entrance, under an arcaded loggia, is reached by an imposing flight of steps. Smaller, but far more picturesque in outline, is the Bishia Mosque, whose graceful octagonal minaret rises close to the Dar-el-Bey. On the other side of the town a little mosque, mostly frequented by women, conspicuous for the ornamentation of the entrance, and by an orange-tree growing in the centre of the tiled *patio*, deserves passing mention.

Whatever interest these and a few other buildings possess may be traced to particular periods of the Arab occupation. The overthrow of the Moors in Sicily, in the thirteenth century, and their expulsion from Spain, two centuries later, brought to the towns of North Africa a people renowned in art, and possessing a culture far in advance of other nations on the shores of the Mediterranean. The arts of Tunis originated with these Moors of Sicily and Spain, but never, apparently, took hold on the native population; and the beautiful plaster vaulting and arabesque tracery, the carved-wood ceilings and

ENTRANCE TO WOMEN'S MOSQUE, TUNIS.

gilded decorations, that attained such perfection at Seville and Granada, received but little encouragement, either in Tunis itself or in any part of the country. The few monumental works that remain will be referred to in succeeding chapters.

## CHAPTER IV.

### TUNIS.

THE SOUKS — THEIR IMPORTANCE — KEPT BY MOORS AND JEWS — DESCRIPTION OF THE SOUKS—GOODS SOLD IN THEM—THE SOUKS OF THE TAILORS AND PERFUMERS—FIRST IMPRESSIONS—BARBERS' SHOPS—COFFEE-HOUSES—COFFEE MAKING—THE GATEWAYS—THE FOUNTAINS—THE DOORS—TALISMANS—THE HAND OF FATIMA—BLACK KEYSTONES—SERPENT WORSHIP—THE HOUSES.

O much has been said and written about the Souks of Tunis that one hesitates to describe them for fear of repetition. They form, however, so large a part of the city, are of such importance socially as well as commercially, and excite so much curiosity, that it would be a grave omission to pass them over in silence.

To one who has visited the great cities of the East—Constantinople or Cairo, for instance—the bazaars of Tunis, extensive though they are, are not very striking. Neither in the quality of the wares, the sizes of the shops, nor the richness of the fabrics, will the souks bear comparison with those of the former cities. Display, indeed, there is none, and more goods might probably be found in such an establishment as the *Bon Marché* of Paris, or a co-operative store in London, than in fifty Tunis shops united. Nevertheless the souks are so attractive that the traveller returns to them again and again without satiety. The reason of this is not far to seek. The people more than the shops, the buyers and sellers rather than the merchandise

displayed, are a never-ending source of delight. In an European shop all interest is concentrated in the wares exposed for sale; in the souks it is the motley multitude that attracts the eye wherever one turns. The souks, in fact, are the life of Tunis. It is here that the stranger gathers all that is possible to learn of the daily life and habits of the people, debarred as he is from what is termed social intercourse. For the native the bazaar is all-important; it is to him not only a place of business, but one of recreation and information. He visits no friend, receives no one at his own house; he has no club, no newspapers, no theatres, no amusements. In the bazaar he meets his acquaintances, hears the news, pursues his avocation, gains his living. His shop closed, he retires to his dwelling, partakes of his evening meal, and spends the rest of his time in his harem. The shopkeepers are principally Moors, with a large proportion of Jews, who carry on their avocations unmolested, as in all other Oriental towns at the present day. The chief souks occupy the space between the grand Mosque and the Dar-el-Bey, although others, almost equally interesting, are to be found in various parts of the town, notably in the vicinity of the different gates. For the present we shall confine our remarks to the former.

Starting from the Boulevard de la Marine, where the traveller will probably reside, passing under the Bab-el-Bahar and across the square to which it gives access, two narrow, irregular streets, lined with common-place European shops, lead to a small open space, flanked by the grand Mosque. This is the heart of Tunis, and at this point the souks proper commence, or rather cluster around it. The souks differ from the streets by being narrower and covered in. The roofs consist either of rough brick vaulting, plastered and whitewashed, and

---

pierced at intervals with unglazed holes which admit the necessary light, or of wooden planks loosely laid across, between which the sun's rays abundantly penetrate. The industries are never mixed, but each trade has a souk or street of shops to itself. The shops themselves are mere holes in the wall without doors or windows, and utterly devoid of any architectural design. The floor of the shop is somewhat raised above the level of the street, and on it the merchant sits cross-legged, his goods arranged around him on the floor or on shelves, but within his reach, without the necessity of displacing himself. The customer remains outside, standing, or seated on one of the two small benches which are usually provided in front of the shop, one on either side. There is little or no display of goods, but as the whole street is devoted exclusively to one industry, the intending purchaser knows at once what article or articles are to be obtained in that particular street. As all the shops are open, each trader can see what his neighbour is doing; trade secrets do not exist, and competition is practically unknown. As soon as a stranger enters a bazaar, the eyes of each successive shopkeeper are upon him as he passes. Should he stop before any particular shop and begin to bargain, the conversation is overheard by traders on either side, and not unfrequently men from more distant shops will come and listen to what is going on. His requirements and the prices in debate are consequently soon known throughout the entire bazaar. Should the merchant with whom he is treating not possess the article required, a neighbour will bring it from his stock, and it is no breach of commercial etiquette for the customer to purchase it, as the two vendors will afterwards adjust the division of profit.

Tunis is a commercial rather than a manufacturing town, and the bulk of the goods sold in the souks are foreign, or made in other places in the Regency. The red skull caps, here called *chachias*,\* in Egypt *tarboosh*, and in Turkey *fez*, worn by every man in the beylik, are made and finished at Tunis, although the dyeing is done principally at Zaghouan. Attar of roses and oil of jasmine—the latter a specialty of the Regency—are made in Tunis. Soap is manufactured largely at Sfax. Harness and leather slippers are made in Tunis, although those of Kairouan are more esteemed, partly on account of their bright colour. Djerba produces the *bernous*, and the loose coat known as a *djerba*; but both are also made in Tunis and in other towns. Finally, the embroidery of Tunis is the best in the Regency. The souks in which the stranger will prefer to linger are those of the tailors and the perfumers. As sewing and embroidery are done exclusively by men, the garments of both sexes are sold in the same bazaar; consequently more women are to be seen among the customers (never among the vendors) of the former bazaar than in any other, which adds much to the diversity and interest of the scene.

The perfumers of Tunis are altogether a superior class; they are richer, better educated (they may frequently be found reading), more richly dressed than their compeers; and their shops, if smaller, are better appointed, and arranged with more care, taste, and luxury. Each perfumery shop is a picture in itself. The merchant squats in the centre of his small aperture, framed, as it were, by his wares; his bottles and packets to right and

---

\* A description of the way in which the chachia caps are manufactured will be found in Chapter XX. of Macgill's *Account of Tunis*.

left, festoons of coloured candles assuming the shape of a Fatima hand above his head, and bowls of henna and native spices on each side of his little counter. This is known as the Souk-el-Attarin, and is perhaps more picturesque than the others, owing partly to the cross perspective of a line of arches with painted shafts of red, and green, and white, and to the scenic effect produced by the accidental position of a series of small apertures in the roughly constructed roof. Many of the shopkeepers in this bazaar can trace their descent from the great Moorish families of Seville and Granada. It is a pretty legend that the keys of their Spanish homes are still preserved, and are handed down from father to son, in the hope that the dwellings of their great ancestors may one day be restored to them.

The first impression on entering any of these souks is one of bewilderment and perplexity—their intricacy and labyrinthian formation; the motley crowd surging to and fro, pressing and jostling, and heedless of strangers; loaded camels and donkeys forcing their way through streets scarcely wide enough to allow two human beings to pass without touching; the noise of hundreds of voices crying, touting, bargaining—all this fairly overwhelms the traveller, until a few visits shall have accustomed him to the strange scene and to the unfamiliar sounds.

Not the least curious of Tunisian houses are the barbers' shop. They do not form a souk of themselves, although they are frequently found in clusters, and, unlike other shops, they are closed by a fancifully painted or neatly carved door, or a net suspended across the entrance.

Coffee-houses are to be found everywhere, and are much frequented in Tunis, as in Paris. They are generally large, square chambers, whitewashed and unde-

corated, around which are constructed rough stone or earthen benches, covered with matting; on these the customers sit, or lie, sipping their coffee and lemonade, and playing cards or dominoes. In one corner is a small stove, where the coffee is made, and its preparation is in this wise: The attendant takes several small tin pots with long handles, and puts into each pot a portion of sugar and fresh-roasted coffee, upon which he pours water almost boiling. Then, pushing the pots into live wood embers in an earthen bowl, and holding them there till the contents are on the point of boiling, he removes them simultaneously with his right hand. Then, without putting any of them down, and with a turn of the hand, he pours the coffee into as many cups, which he holds in his left hand, and without spilling a single drop. The cups are without handles, and are served inside other cups to prevent burning the fingers. The dexterity with which the pouring out is performed is worthy of note. The coffee, delicious in flavour and retaining the full aroma of the berry, is apt to be thick. One has to wait until it is almost cold before it can be drunk. The natives are not particular: they swallow the grouts, for it is both meat and drink to them. This luxury is only one halfpenny a cup.

The Gateways of Tunis, apart from their Oriental look, have no special features of interest. As the gates are closed at night, stone fountains, often of a monumental character, are to be found outside the walls for the convenience of caravans and wayfarers arriving after sunset. Behind the fountain (synonymous with washing-place or trough in Eastern countries) is a loggia, or arcade, consisting of two or more horse-shoe arches, forming the front of a deep porch. Along the back wall runs a stone bench. Delicate shafts with capitals of Arab design support the arches, but everything in the way of building

materials is so covered with whitewash in this country that the beauty of the decorative features is frequently concealed.

All Oriental cities have a charm and a colouring of their own, differing essentially from what is commonly termed 'the picturesque' when speaking of European towns. In spite of a dearth of architectural monuments, Tunis, with its labyrinth of streets, its flying arches from house to house across the narrow thoroughfares, its arched doorways with their delicate carvings in stone or marble, its wilderness of shops, their wooden columns painted with spiral bands in gaudy colours of blue, and red, and green, has much to charm the eye, and colouring enough to balance the wearying monotony of whitewash. Very curious, too, and characteristic, are the wooden doors of ordinary Moorish houses, with their quaint devices formed with countless round-headed nails: crescents and crosses, graceful curves, and crude imitations of symbols of deities of long-forgotten Phœnician origin, are mixed together in endless variety. Like the horse-shoe nailed on the cottage wall in our own country, these nails, a remnant of a still older superstition, are regarded as a protection to the abode and a charm to keep off the evil eye.

A still more universal charm against this dreaded influence is the uplifted Hand of Fatima. There is scarcely a house-wall, Moorish, Arab, or Jewish, on which this emblem is not to be seen in some form or other. It is most frequently met with as a simple red daub, as if produced by a natural hand dipped in blood or other red colouring matter, and with outstretched fingers impressed simply upon the door or wall. Sometimes it is neatly painted in the Prophet's favourite colour—green; at others it may be found

worked out in nails on the door, or in carved stone on the lintels or jambs. Its correct form is that of an open hand, the fingers extended and the palm turned towards the spectator ; but, like other religious symbols, it has now assumed a conventional shape. Not unfrequently it may be seen painted on the skins of horses and mules. It is also a favourite device for articles of jewelry worked in silver, and worn as a locket or brooch.

Another talisman, equally curious, is that employed to guard animals from the effect of the evil eye. It consists of two small triangular cushions, made of velvet or stuff, embroidered with metal, and connected with cords, finished off with knobs or tassels in gay colours, and is hung round the neck of the animal. Intimately connected with these and many other superstitions is the employment of black stone or marble, and, failing these materials, black paint, in the voussoirs of arch construction. They tell you that the black stone, especially when it occurs as the keystone of an arch, the one black spot where all else is dazzling whiteness, is symbolical of sin. No human work is perfect. To attempt perfection would be an act of defiance to the spirit of evil, whose powers of destruction are illimitable. The black stone, emblem of imperfection, becomes a homage or sign of concession to this power, and thus secures the protection of all the other stones of the fabric—the white stones without spot or blemish. Passing from this pretty legend, there is yet another form of superstition, unmistakably Oriental in its origin, that prevailed till recent times, and is not yet quite extinct. It is the reverence for serpents. ‘Blessed is the habitation,’ say they, ‘where the serpent dwells.’ Neither hunger nor thirst is ever known to this member of a family. His food is prepared and his presence expected before the commencement of the daily

meals. No one eats till the serpent has finished and has crept back satisfied to his hole. If he is not the ruler of the house, he possesses an importance the owner himself does not even attempt to share.

The absence of windows in the labyrinth of houses constituting the Arab town is the more remarkable, as many of the houses are two or more storeys in height. Here and there, at some distance from the ground, is an opening grilled or shuttered; sometimes projecting beyond the face of the wall, sometimes perched high up athwart the thoroughfare, with close-guarded windows looking both ways: this indicates the women's apartments. A glance or a salute directed at any of these shuttered openings might result in a smile of recognition from some veiled favourite in her forced confinement, but would certainly not meet with any response. Dwelling-houses, whether Moorish or Arab, are all based on the same model, as much so as our ordinary houses in Bloomsbury or Bayswater. A small vestibule within the doorway opens into a court or *patio*, varying in dimensions according to the wealth of the proprietor. Around it are a number of small rooms, forming the men's apartments, the kitchen and other offices. In houses two or more storeys high an upper floor is appropriated to the women, and a small well-hole is so constructed in the centre of the house that water and other necessaries can be drawn up, the gallery above being so concealed by woodwork that women are invisible to those in the court below.

## CHAPTER V.

### TUNIS.

THE PALACES—THE MOHAMMEDIA—THE BARDO—THE DAR-EL-BEY.

**A**S each Bey, on accession to power, has been accustomed to discard the palace occupied by his predecessor, and to build a new one for himself, the royal residences around Tunis are numerous enough. The materials, however, of which they are built are so indifferent, and their construction is so faulty, that, without constant repairs, they would of themselves soon fall to decay. Not only are the deserted palaces uncared for, but their materials and fittings are carried off in order to erect new edifices, frequently worse designed and worse built than those sacrificed. In this way has the public money, sorely needed for roads, bridges, and other works of utility, been diverted and squandered.

The most extensive and striking of these royal ruins is the Mohammedia, about ten kilomètres south of Tunis, noticed in Chap. VII.—a standing testimony of the folly and incompetence of the later rulers of the country

The Bardo, two kilomètres from the Bab-es-Sadoun, and west of Tunis, is as pretentious as the Mohammedia, although covering a smaller site, and is remarkable, setting aside its historical interest, for prevailing bad

taste and incongruity of design ; and although it has not been dismantled, its construction is so weak, and otherwise defective, that some few years hence it will be unsafe to occupy. In its turn it has been set aside in favour of the Marsa, where the present Bey now resides. Descriptions of the Bardo are so numerous that we shall not attempt any detailed account of it, nor are we induced to do so in consequence of any architectural features it possesses externally. Surrounded by a moat, and furnished with a crenelated wall and bastions, it has the appearance of an Arab barrack or fortification rather than a palace. For purposes of defence it would be perfectly useless, on account of the flimsiness of its construction. Internally it consists of a series of passages and courtyards, leading to a vast number of buildings, put together unskillfully, and without any apparent design, with the exception of the principal staircase and some private rooms for the special use of the Bey. In these latter are some domed ceilings of beautiful plaster-work. There are no features of interest, in spite of many precious objects which it contains. Shafts and slabs from Carthage, mosaics and marble carvings from Italy, tiles of native manufacture, furniture from France, tawdry hangings, pictures and engravings, glass and gilding, are all brought together from every country in Europe—an unseemly collection of things good and bad, but mostly bad.

A far more satisfactory edifice, and in many respects the most noticeable building in Tunis, is the *Dar-el-Bey*, or town palace, where His Highness, the present Bey, holds weekly receptions. The main façade, arched and supported by graceful shafts, forms one side of the *Kasba Square*. Although erected so recently as the beginning of the present century by Hamouda, one of the most intellectual of the Beys, it is an excellent specimen of

Moorish work, and the carved ceilings, the plaster arabesques, the gilded decorations and gorgeous colouring of some of the apartments, will compare favourably with similar work at Seville or Granada. The room set apart for the Wuzeer, and the great dining-room of the palace, are gems of art, scarcely surpassed by anything in the Alhambra. The walls are covered for the most part with old tiles, for which Tunis was once famous, showing great fertility of design and wondrous harmony of colour. Here, as at the Bardo, the effect is marred by the introduction of French furniture, trumpery artificial flowers under glass cases, and common lithographs. The disposition of the private apartments, especially those of the women, is interesting. The harem consists of a large square room, or patio, at one end of which, opposite the entrance, is a spacious recess, forming the sleeping-chamber of the Bey. Ten doors, five on each side, give access to as many small chambers. These melancholy rooms, whitewashed, ill-appointed, and devoid of decoration, are lighted from above, or by means of small windows placed high above the level of the eye, and inaccessible. They are more like prison-cells than the dwelling-rooms of innocent women. One side of the Dar-el-Bey looks on to the Souk-el-Barka, or Souk-el-Bey, and through one of the windows, arranged for the purpose, the ruler can find amusement, during his sojourn in the city at the feast of the Ramadan, by watching the sale of jewels and other objects of native art in the bazaar below. At other times of the year the Dar-el-Bey is empty, or is occupied by foreigners of distinction, whom the Bey may wish to honour during their sojourn in his capital. Queen Caroline resided there for a short time. There is some talk of converting this palace into a museum, for which there is much need in Tunis. No

building could be better adapted to the purpose. It is well constructed (the principal court being of white and black marble), is of beautiful architecture, and is spacious and well lighted ; many of the apartments are of Moorish work, and when the tawdry modern furniture and fittings are removed the great excellence of the native work will be more apparent. It is lamentable that such elegant ornamentation should be associated under the same roof with other decorative work in the worst possible taste. Annexed to this palace is a series of state-rooms of more recent date, decorated after the manner of a French café, presenting a striking contrast with the beauty and refinement that characterises the older work.

## CHAPTER VI.

### TUNIS TO CARTHAGE.

BY RAIL OR ROAD?—SITE OF CARTHAGE NOT STRIKING—CHAPEL OF  
ST. LOUIS—EL-BAHIRA—CARTHAGINIAN LITERATURE—THE CISTERNS  
—UTTER RUIN—AUTHORITIES SUGGESTED.

**T**O take the railway to Carthage, or rather to the Malga station at the foot of Carthage hill, seems a prosaic mode of conveyance to a site that is linked in association with so many poetic memories. The journey by road is preferable, occupying about the same time, and enabling the excursionist to reach the principal points of interest without alighting. There is nothing in the aspect of the spot to charm the eye, nor is there anything in its surroundings to excite the imagination or to kindle enthusiasm. Cape Carthage, the headland of the northern shore of the Gulf of Tunis, is an ordinary eminence of red sandstone; and the other adjacent hills on which the great city was built are but undulations of the surface, nowhere precipitous and not marked by any striking contours. Were it not for a modern chapel erected on the highest ground, in commemoration of St. Louis and his ill-starred expedition against the Saracens, and forming a conspicuous landmark, the site of Carthage might be passed by unnoticed. Approached from the land side, the sandy plain, some ten miles long, to be traversed after leaving Tunis, is devoid of interest. On the left a few whitened houses, surrounded by olive plantations, are

dotted on the surface, with here and there a solitary palm-tree or a line of cactus hedge; on the right lies the stagnant El-Bahira, the lake of Tunis, some seven miles across, its banks clothed with reeds, its shallow waters haunted by pelicans and flamingoes, and its bed a deposit of mud and sewage that has been poured into it from the city of Tunis for a period of more than 3500 years.

Of Carthage itself and its remains it would almost seem presumptuous to say anything. The store of literature up to the present year, relating either to its history or archæology, is as abundant as it is generally meritorious. A glance at the annexed bibliography shows how great have been the attractions of this subject to authors of many nationalities, and how each successive exploration has been followed by a fresh contribution to Carthaginian literature, including romance, poetry, and drama.

It seems strange that the only standing memorials of both Punic and Roman Carthage should relate to the water supply. The ruined reservoirs, which El-Bekri calls 'the cisterns of the demons,' may still be seen on the southern slopes. At the present day they are nearly filled up with earth and the accumulated deposit of many centuries. A settlement of Arabs is located within them. This work may be assigned to Carthaginian times, although partly reconstructed at a later period, and used in connection with the aqueduct that brought the waters of Zaghouan and Djougar to Carthage and Tunis. And below the citadel hill is another range of great reservoirs, called, for the sake of distinction, the smaller cisterns, still used by the peasantry. This is a work of the Romans, built for the storage of rain-water.

For any indications of monumental grandeur one

may look in vain. The wealth of marble\* and porphyry—the glory of the earlier as well as of the later Carthage—has long since disappeared, crumbled to dust, removed to enrich the palaces and mosques of North Africa, or transported across the Mediterranean to embellish the edifices of Spain and Italy.

The piteous interest attached to this old-world metropolis is increased rather than diminished by a study of the patient investigations of numerous explorers during the present century. The subject is perhaps one for the consideration of the antiquary and the historian rather than for the general traveller, but we may note with gratitude the diligent and successful researches of Beulé and Davis, and the investigations, amongst many others, of Falbe and Sainte-Marie. To the pages of these authors we commend inquiring readers for information relating to the topography and antiquities of Carthage; and for a history of the great Punic city, its rise and development, Mr. R. Bosworth Smith's *Carthage and the Carthaginians* should be read by every one contemplating an excursion to this old-world site.

---

\* 'Marble at Carthage is so abundant,' says El-Bekri, the Arab writer of the eleventh century, 'that if all the inhabitants of Africa were to assemble to carry away the blocks they could not accomplish the task.'

## CHAPTER VII.

### TUNIS TO ZAGHOUAN AND OUDENA.

*November 2nd and 3rd, 1885.*

VIEW OF TUNIS—THE BAB-EL-ALOUA—SALT MARSH—THE MOHAMMEDIA  
—THE AQUEDUCT—RECENT DESTRUCTION—THE TOWN OF ZAGHOUAN  
—THE TRIUMPHAL ARCH—THE SPRING—THE TEMPLE—A WEDDING  
CEREMONY—A DONKEY STOLEN—BEDOUINS—THE RUINS OF UTHINA  
—FINE POSITION—RETURN TO TUNIS.

**T**HE distance from Tunis to Zaghouan is said to be forty English miles. It is probably not more than thirty-two miles, or fifty kilomètres, for the four horses that drew our landau in the morning of November 2nd accomplished the distance in a little over four hours. Passing the Bab-el-Aloua, the outlet of one of the most interesting and characteristic Arab quarters of the city, the route traverses some olive plantations which abound on this side. Looking from the higher ground, which we reached by a gentle ascent, a magnificent view of Tunis and its background of mountains is obtained, while the near distance is made picturesque by the pleasing outline of the Bab-el-Falla, out of which shoots up erect a stately palm-tree. The track now enters an extensive salt marsh, formerly a lake, and which an enterprising speculator endeavoured some years ago to fill up and reclaim. But the salt water always rises, more or less according to the time of year, and the scheme was given up as impracticable. Three kilomètres

further brought us to the vast ruined palace (mentioned in a previous chapter) erected some thirty-five years ago by Ahmed Bey at a cost of about half a million sterling, and called after him the Mohammedia. It is a curious custom that forbids one ruler to occupy the house of his predecessor, a custom that by its extravagance has contributed as much as anything else to the downfall of the Regency. The palace with its outbuildings, covering many acres, has been dismantled and abandoned. The gardens, planted with groves of orange and fig-trees, and once gay with the bright colouring of tropical vegetation, is now a wilderness—the home of the jackal, or a rough shelter for a few Bedouin families. The country beyond this is a dreary waste, once a region of extraordinary fertility, but now desolate and uninhabited. Through the centre of it marches in stately grandeur the long line of piers and arches that in Roman times brought the abundant waters of Zaghouan and Djougar to the cities of Carthage and Tunis, fertilising in its course, by a proper system of irrigation, a tract of country embracing several hundred square miles.

Perhaps there is no monument ever erected by these old Romans that is stamped in a higher degree with the impress of Imperial will, or that exemplifies so strongly the force of the Roman character, as this so-called aqueduct of Carthage. We know it was a work of necessity, that it was conceived by the Emperor Hadrian on the occasion of his first visit to Africa, A.D. 123, and there is reason to believe that it was not finally completed till the reign of Septimius Severus, seventy years later. Through the greater part of its course it was subterranean, but where it passed over this plain of the Oued Melian, as well as the adjoining plain of the Oued Medjerda and other depressed surfaces, it was carried on

a series of arches, varying in height with the fall of the ground. 'The waters flow to Carthage,' says El-Bekri, 'on ranges of arches, placed one above the other, reaching even to the clouds.' The statement seems exaggerated when speaking of that portion of the aqueduct we are now following, which does not exceed seventy feet in height; but a little further on, where it crossed the Oued Melian, the ancient Catada, there was a series of magnificent piers and arches, rising more than 120 feet above the river. These were standing a few years ago in all their grandeur, useless, it is true, for the purpose of carrying water, but a fitting monument of a great people and a dignified memorial of a beneficent work. As an apology for its wanton destruction by a French engineer attached to the Government of the Bey, we are told that a new bridge was required at this spot, that the ancient work obstructed the flow of the river, and its materials were of use for the purposes of reconstruction. Not only here, but in the Medjerda valley also, which is traversed by the Tunisian railway, there is the same thoughtlessness and disregard for this ancient monument. In the latter case a long line of piers and arches has been broken near the centre to allow the passage of the line of rails. A slight deviation in both cases would have prevented these acts of Vandalism. The construction of the aqueduct varies in different parts of its course. In the plain of the Melian, where quarries were not far distant, it is beautifully constructed with magnificent blocks of limestone, each being two feet in height; but in the Medjerda valley, far removed from any stone quarries, the soil of the plain mixed with lime forms the material with which the piers and the superstructure are built. The method employed here was that of building in sections, after the manner of modern

THE AQUEDUCT OF CARTHAGE.

concrete construction, known to the Romans, who learnt this system from their predecessors, the Carthaginians. In the view of the aqueduct here given these sections, three feet eight inches high, are clearly shown, as well as the thick layer of mortar between each section, and the ends of the slight framework of olive-wood for stiffening the fabric at intervals. The channel or duct that conveyed the water was three feet wide and about six feet high, vaulted over, and with openings at intervals for ventilation and for the purpose of cleaning,

Shortly after passing the Oued Melian we reached Magaran, a post-house on the line of the aqueduct. Here the ducts from the course at Zaghouan, as well as from that at Djougar, some twenty miles distant, meet, the two waters flowing thence to Tunis in one conduit. The extension of the modern aqueduct follows the line of the original work, iron pipes underground being substituted for the original channels.\*

We now approached the little town of Zaghouan, situated on the northern slopes of the mountain of that name. It is a pleasant spot, embosomed in gardens of orange and fig-trees, a wilderness of cactus, myrtle, rose,

---

\* 'The total length of the aqueduct was sixty-one Roman miles, and it was estimated to have conveyed upwards of 7,000,000 gallons of water a-day, or eighty-one gallons per second, for the supply of Carthage and the intermediate country. M. Collin, a French engineer, planned and executed the modern water supply at Tunis. The portions of this original aqueduct that ran underground were comparatively unimpaired by time, and served, with a little repair, for the modern work. Where the old aqueduct passed high over the surface of the country iron pipes and syphons have been substituted. The contract price was 7,800,000 fr., but the work certainly cost the late Bey nearly 13,000,000 fr., and, useful as it certainly is, there is no doubt that it was the commencement of his financial difficulties.'—Sir R. L. PLAYFAIR, *Footsteps of Bruce*.

laurel, and arbutus, while here and there, standing erect in this luxuriant undergrowth, a tall palm lifts its head into the clear sky. The air is sweet with wild thyme and violet lilies. Hawks disport themselves in mid air, the eagles soar aloft, lizards lie basking in the sun, and crested larks innumerable flutter across the track. The town itself has no attractions—narrow, irregular streets, unpaved and ill cleansed, and houses that betoken an impoverished community. And yet the trade carried on here must be considerable, for it is the only place in the Regency where the knitted *chachias*, the national head-gear, are dyed. The properties of the water here appear to be particularly adapted for the purposes of dyeing.

A triumphal arch, of no special merit, still forms the principal entry to the town. Whatever public monuments may have existed in the time of the Romans have long since disappeared, and the stones reused in the building of the more modern Arab town.

We had a letter of introduction to the Chief Inspector of the waterworks at Zaghouan ; but knowing him to be absent, and his house being at some distance, we sought accommodation in a half-ruined dwelling belonging to a Frenchman, who combined the business of inn-keeping in a very moderate way with that of baking bread for the few soldiers quartered in the town. The place had some pretensions, having originally formed the harem, or women's apartment, of a large Arab house. The walls of the principal chamber were covered with Moorish tile-work and the ceiling trabeated. With this exception all else was dilapidated. The cooking, such as it was, had to be done in the open courtyard. A shed answered for the bakery, and a small loft, scarcely weathertight, with ill-fitting door and window, served as a sleeping apart-

RUINED TEMPLE, ZAGHOUAN.

ment for ourselves and M. Carbonaro, junior, of the British Consulate at Tunis, who accompanied us on this excursion.

The afternoon of our arrival at Zaghouan was spent in an excursion, two and a half kilomètres distant, to the famous spring which, issuing from the mountain of that name, supplied water to Carthage, as it still does to Tunis. Here are the ornate remains of a temple in the centre of the arc of a semicircular colonnade. The area in front, ninety-four feet wide and eighty-six feet long, was paved with large flat stones. The spring flowed under this area, passing into a basin shaped like a double horseshoe, to which there was access by a flight of steps at either end. Here commenced the conduits in connection with the great aqueduct and the branch channels for the supply of the adjacent town and the irrigation of the land.

A wedding ceremony enlivened the evening of our sojourn in this dreary village. A procession of some dozen women bearing torches and accompanied by a posse of children, mostly relatives of the bride, were proceeding to the residence of the bridegroom to congratulate (or condole with) him on his approaching marriage. As they passed through the streets they uttered the most plaintive wailings, which did not cease on their entering the door. We were told that their lamentations (or expressions of joy) would be continued throughout the night—a statement the truth of which our curiosity was not sufficiently eager to verify.

Strolling out early the following morning we found some little excitement had been created by the arrest of an Arab on the charge of stealing a neighbour's donkey. Incidents of this kind become a source of

amusement to these usually quiescent people, shouting, screaming, gesticulating, and doing everything that could be done to make matters worse, if not for the reputed owner, at least for the unfortunate ass, whose bridle was jerked first one way and then the other. All this was going on in a steep street almost too narrow to turn round in. A few old men of the place were giving gratuitous advice, and perhaps would have continued to give it to the present time if the town policeman had not arrived, and led the thief away to the common prison. And what a prison! A closed cell or stall in the stable where our horses were sheltered! A rough padlock secured the door, and a square hole in the panel enabled passers-by to exchange greetings or maledictions with the unfortunate occupant.

From Zaghouan there is a carriage-road southward to Kairouan by way of Djougar. The preferable mode of reaching Kairouan is by way of Sousa. (See Chap. XVII:)

At 8 a.m. we started for the ruins of Oudena, a distance of about twenty-four kilomètres in a northerly direction. This is a pleasant drive through a beautiful undulating country, covered with olive-groves, and presenting charming views of mountain scenery. The population of this region is purely nomadic. There are no indications of any settlements. We met a body of these nomads, consisting of two men and twenty-four women of various ages, all on foot, and the usual accompaniment of baggage-camels and donkeys. The women, especially the younger ones, were well dressed, with a profusion of silver jewelry and 'charms' round their necks or on their arms. Their faces, as customary with Bedouins, were uncovered, and after a little parleying

through our friendly interpreter, M. Carbonaro, they came close to the carriage that we might examine their gaudy decorations.\*

At 11 a.m. we neared the upland on which the ruins of Oudena, the ancient Uthina, were clearly visible; and in the absence of either tree or shrub to afford shelter from the sun's rays, we improvised our breakfast-table under the shadow of the carriage. Then ascending the hill on foot for about a mile, the remains of this great town, covering several hills, were spread before us. Here can be traced the walls of temples, basilicas, and other public buildings. The ruined theatre, the stone seats of the amphitheatre lying in the hollow between two hills, the broken aqueduct, huge cisterns covering more than an acre of ground, long lines of walls and towering masses of rubble, give some faint idea of the extent and importance of the city of Uthina in the days of the Romans. All has been neglected and long since overthrown. The jackal glides stealthily amongst the fallen masonry, and some half-dozen Bedouin families find shelter in the cisterns and the overthrown theatre. There is no finer position for a city in all Tunisia.

Regaining the carriage, which we had sent on to the ruined bridge over the Oued Melian that skirted the ancient city, we soon reached the Mohammedia we had passed the previous day, and in less than two hours arrived in Tunis.

---

\* Although classed as nomads, these Bedouins have certain settlements called 'Douars,' which are nothing more than 'a number of tents, whose inhabitants are generally subject to the oldest and richest Bedouins. Several "Douars," sometimes many miles distant from each other, form a Ferka (section), which is governed by a Sheik. Every Bedouin tribe, of which there are a great many, has, according to its size, several Ferkas, which together are subject to a common head—the Caïd.'—HESSE WARTEGG, *Tunis*, p. 245.

## CHAPTER VIII.

### TUNIS TO BOU-CHATER.

*November 6th, 1885.*

OUR JOURNEY CURTAILED BY BAD WEATHER—SEBBALA—THE WAYWARD MEDJERDA—REGULUS AND THE SERPENT—UNCERTAINTY OF AGRICULTURAL PURSUITS—THE LONE LAND—LOST IN THE MARSH—UTICA THE ELDER SISTER OF CARTHAGE—THE CISTERNS—THE FARM—A KIND RECEPTION—UTICA PAST AND PRESENT—FINE WEATHER AGAIN—RETURN TO TUNIS.

**I**NCESSANT rain the previous night augured ill for an excursion to Bou-Chater; and when the carriage, with six small horses, was at the door of the hotel at 7 a.m., another downpour caused us to hesitate about undertaking the journey. We had intended, after visiting the site of Utica, to proceed to Porto Farina, on the north-east coast, where Sir R. L. Playfair (who was making a consular tour in that district) had kindly undertaken to convey us in the gun-boat placed at his disposal as far as Bizerta. After making a circuit of the remarkable lake there, we proposed to return to Tunis by way of the Arab town of Mater. Notwithstanding the bad weather and the terrible state of the roads we started soon after 8 a.m., and skirting the walls of the Bardo outside the town, soon entered an extensive olive wood several miles in length. At 10 a.m. we passed on the left a small stone-built fountain, embellished with shafts and capitals from some Roman edifice, and with a rest-house attached to it, as is

SEBALA.

usual in the Regency. Leaving the olive plantations we entered upon a tract of open country, and at 11 a.m. halted at a charming spot known as Sebbala (the Fountain). This is an Arab construction in the form of a loggia with four arches, the shafts and capitals being of white marble. A great drinking-trough stands in front of it, and behind, at either end, is a small café and a shop. Clusters of cypresses, hedges of prickly pear and arbutus, and a tangle of luxurious evergreen, give a colouring to this pretty spot that, on our return in the bright sunshine the following day, was a welcome change from the marshy and scrub-covered plains of the country beyond. A gathering of some twenty Arabs, drinking coffee or playing cards, prevented by the rain from continuing their outdoor employment, enlivened the scene; while camels and donkeys were wending their way here, either for shelter or refreshment. In another hour and a half, after traversing a broad marsh, we approached the banks of the Oued Medjerda, spanned at this point by a modern bridge of seven arches, and at the foot of which is a small rest-house.

This stream, the most important of the rivers of Tunisia, is associated with numerous remarkable events in the early history of this country, and is linked with many of the myths and fables that have been interwoven in the traditions of the primitive inhabitants. The story of Regulus and his affrighted soldiers, striving in vain against the monstrous serpent that haunted the banks of this river Bagradas, is an old-world legend not difficult of explanation by the modern traveller. Stretching serpent-like along the plain that extends from the Numidian mountains to the eastern coast of Tunisia, never visible till you reach the verge of its steep banks, winding and twisting in a way that can only be explained

by a study of the friable nature of the soil, no wonder that this stream, one day a dry bed, the next a rushing torrent of water, rendered yellow by sandy mud, became the seat of a superstition, till at last it assumed a living form. Scarcely 300 miles in its entire length, and not more than 100 yards wide at the point where we were now crossing, it is of no value for purposes of navigation. It has many tributaries, but, with few exceptions, they are mountain streams dried up in the summer months. The eccentricities of this river have been a puzzle to geographers. At the commencement of the Christian era it emptied itself into the sea some few miles north of Carthage. Four times since that period it has shifted its outlet, and now at the present day it debouches sluggishly close to Porto Farina, many miles northward.\*

The uncertainty attending agricultural pursuits in the vicinity of this wayward river can be illustrated by what happened recently to a merchant of Tunis, who had purchased the olive crop near a small town lying on the eastern slopes of the Medjerda valley. On the occasion of his visit, previous to gathering the fruit, the rainy season had set in; the waters rose and gradually submerged the trees, while the unfortunate owner, looking on, was unable to stir for a whole fortnight on account of the impassable condition of the country.

The flat region we now traversed was formerly covered by the sea. So marked are the confines of the Mediterranean here, that there is no difficulty in recognising the ancient coast line. The forlorn aspect of any low-lying land, once covered by water, is here intensified

---

\* For full information respecting the geography of the Medjerda valley the reader should consult the work entitled *Exploration scientifique de la Tunisie, par Charles Tissot. Tome I. Géographie.* Paris, 1884. 4to.

by the absence of trees or shrubs of any kind, as far as the eye can compass. It might well be called the Lone Land. It happened that on the previous day the wife of the farm-bailiff we were about to visit a few miles further on was journeying over this marsh from Tunis, with her little children and an Arab guide. She had come direct from the South of France, and had, probably, associated her new home in North Africa with tropical vegetation and welcome shade. The track was obscured, mud and slimy grass clogged the horses' feet, and the little party was unable to proceed. Night came on, and the anxious husband, accompanied by his labourers, scoured the damp marsh, lantern in hand; and, before the morning broke, succeeded in finding his family, worn out with hunger and fatigue.

At 2.30 we crossed a tributary of the Medjerda, spanned by a modern bridge. So accustomed are the natives here to fording the streams that our driver took no notice of the bridge, but dashed through the river, in which, fortunately, there was but little water. A gradual ascent of about five kilomètres brought us to a group of farm buildings clustered round some Roman cisterns, and in the vicinity of several low hills. This is Bou-Chater, the site of Utica, one of the oldest-known cities of the world, and commonly called the elder sister of Carthage of the Phœnicians.\*

Through the kindness of the resident-bailiff at this

---

\* 'Founded twelve centuries before the Christian era, Utica may claim to be one of the oldest colonies that the Phœnicians from Tyre established on the African coast. It preserved its independence during the rise of Carthage. After the first Punic war it suffered at the hands of Carthage, in consequence of having taken part in an insurrection against its younger sister. The territory was ravaged at a later period, and the city besieged by Scipio during the second Punic war by land and sea. It submitted to Rome at the commencement of the third

farm (which consists of many thousands of acres leased to a wealthy and enterprising French capitalist), we obtained a comfortable lodging for the night, and, having brought a good stock of provisions, we were better off than the misty atmosphere and terrible state of the roads led us to hope. The rain ceased at sunset, and the prospects of fair weather on the morrow were encouraging. Any attempt to continue the journey to Porto Farina was out of the question, as the track beyond Bou-Chater was quite impassable. An early visit to the great cisterns—two of which have been repaired and converted into magnificent farm stables, each 120 feet long and 19 feet wide—and a survey of the site of the ancient city from the higher ground formerly occupied by the citadel, occupied three or four hours of the following morning. The city was built on a promontory, and was enclosed with a wall of great strength and solidity. It contained a large harbour for war vessels, with a palace for the Admiral or Governor in the centre, a citadel, an amphitheatre, numerous temples, and an immense arsenal. 'The adjacent country,' says Cæsar, in his *Commentaries*, 'is of great fertility. The trees supply plenty of timber. The fields are covered with corn, and there is water in abundance.' What a mighty change! No longer a promontory, for the sea has receded some six or seven miles. No wall of defence that took Scipio and his gallant soldiers four whole years before they succeeded in scaling it, but long lines of

---

Punic war, and after the destruction of Carthage became the metropolis of Africa and the residence of the Roman proconsul. Cato resisted Julius Cæsar here, and, fortune favouring his great rival, put an end to his own life within the walls. On the rebuilding of Carthage Utica lost its position. It afterwards became a great centre of Christianity, but was finally destroyed by the Arabs in the seventh century.'—V. GUÉRIN, *Voyage*, tom. ii. 11.

earthen mounds and half-buried masonry. No war harbour, but tufts of reeds with masses of walling peeping out here and there to mark the quays, that once were above the water line. No palatial edifice on an island in the centre, but a confused heap of rubble, two pillars alone standing up erect in defiance of wind and weather and the ravages of time. No citadel, but two whitened koubbas of saintly Mohammedans to mark the highest ground. No amphitheatre, but a great hollow of shapely form between two hills, with an arena of green turf and banks of seats clothed with herbage. No temples or public monuments, but fragments of marble, *frusta* of shafts, and great blocks of hewn stone. The plough passes ruthlessly over these green hills and marshy lands, literally turning up marble—the marble of the palaces and temples of Roman Utica. The older city of the Phœnicians, awaiting the spade of the explorer, lies below.\*

We left Bou-Chater at midday in bright sunshine, with pleasant thoughts of an agreeable visit and of much kindness shown us by the manager of the farm. Notwithstanding the wretched condition of the track after heavy rain, we were back again in Tunis, after six hours' quick locomotion.

---

\* The principal works relating to Utica and the river Medjerda will be found under the heads of Daux, d'Hérisson, and Tissot, in *The Bibliography*.

## CHAPTER IX.

### TUNIS TO SOUSSA.

*November 8th and 9th.*

OUR START — OUR CONVEYANCE — STATE OF THE 'ROADS' — HAMMAM-EL-LIF — SOLIMAN IN THE DISTANCE — GROUMBELIA — TOURKI — BIR-EL-BOUÏTA — A TUNISIAN FONDOUK — KASR-EL-MENARA — SEBKHA-DJIRIBA — HERGLAH — SEBKHA-HALK-EL-MENZEL — TRAVELLING WITH A LANTERN — APHRODISIUM — MIRAGES.

**T**HE journey from Tunis to Soussa is usually performed by sea, the steamer leaving the former place on the afternoon of one day, and reaching its destination the following morning. The journey by land, which we accomplished in two days, affords an opportunity of seeing a considerable stretch of country, and charming views of the whole coast line. Leaving our luggage at the hotel, and taking handbags, wrappers, waterproof sheeting, and provisions, we started early on the morning of November the 8th in a carriage drawn by four small horses. The hackney-carriages of Tunisia are not remarkable for elegance or comfort. A kind of low glass case, furnished with two small windows, is placed on the top of a rough, double-seated vehicle, thus forming a closed conveyance, which cannot be converted into an open one without entirely removing the superposed glass box. Nor, when both windows are shut, is it possible to alight except with assistance from without, as the windows and

doors, being in separate pieces, do not open together; and the former, whether open or closed, are fastened from the outside.

The rain, which had fallen heavily on the previous night, had rendered the roads in some parts barely passable. We use the word *road*, and must continue to do so for want of a more appropriate term. In point of fact there are not, throughout the whole of Tunisia, any roads at all as we in Europe understand them, but simply tracks, such as have been used by the natives from time immemorial with their droves of camels, mules, and cattle; following in most instances the more permanent roads that were formed by the Romans during their occupation of the country. From Tunis to Hammamel-Lif a road is in course of construction, but was not in a sufficiently advanced state to be serviceable, so that it was necessary to take the open fields on either side, making progress somewhat tedious.

In a bracing air, tempered by the bright rays of the morning sun, we drove through the Bab-el-Djezirah, and, leaving the modern racecourse on our left, passed, after an hour's drive, a well-designed fountain with two marble shafts, and forming a loggia in front of a rest-house. For about three miles the track continued over an olive-covered plain, our little horses dragging their load wearily at foot pace through the mud and slush that reached almost up to the boxes of the wheels; the range of hills, on a spur of which Hammamel-Lif is situated, towering up in front of us, and appearing to bar our passage.

Crossing the Oued Melian over a recently constructed bridge, we entered a track of country in better cultivation, dotted with plantations of olive and cactus, and an occasional palm-tree with wells at frequent

intervals. On rounding the hill close to the seashore we found ourselves suddenly in the main street of Hammam-el-Lif, the ancient Mascula. As its name indicates, this is a bathing-place, with warm springs issuing from the hills, and is a favourite summer resort both for health and pleasure. It can scarcely be called a village, for it consists of a royal palace and a few bath-houses, almost deserted during the winter months. Both palace and houses are built of rubble, whitewashed, and are altogether unattractive and devoid of any architectural pretensions. The situation, however, in the centre of the Bay of Tunis, is very beautiful, commanding an uninterrupted view of the entire sweep of the seashore—Radès, Gouletta, the hill of Carthage, and the bold headland of Sidi-Bou-Saïd. Pushing on at once, we soon entered a vast marsh, covering the space intervening between the hills and the sea; here commences the celebrated Enfida estate, the disputed ownership of which may be said to have brought about the French Protectorate. It is bounded by the towns of Hammamet, Zaghouan, Kairouan, and Soussa, having an area of about 250,000 acres, and a population of not less than 7000 inhabitants. The entire property was sold to the *Société Franco-Africaine* in 1879, by Kheir-ed-din, Prime Minister of Tunis, and is still in their possession. The marsh was in parts parcelled out with stakes and wire fencings, as if for enclosure, but no trace of a road or track was anywhere discernible to the eye of the uninitiated. Over this swamp we toiled for a full hour, and after passing, on the right, a large, square drinking-fountain, with running water brought down from the hills, and further on to the left, a dome-shaped well, we at last reached firmer ground, and were once more within sight of olive-groves and other signs of culti-

vation. Soon, on our left, gleaming in the bright sunlight, stood out the whitened walls of the Arab town of Soliman, its minarets and snow-white cupolas outlined sharp and clear, and framed in the deep blue of the receding hills. A short distance further brought us to a small dilapidated well on the left, with a ruined building behind it. At a quarter-past 12 o'clock we reached the most noted fountain of these parts, the Bir-el-Bey, near which are some Roman ruins of no great importance, and gardens in fair cultivation; altogether a pretty spot. At half-past 1 p.m. a magnificent olive-grove was traversed, and the road, becoming drier and firmer, we hoped that our difficulties of locomotion were at an end; but, alas! they were soon to begin again, more unpleasantly than before. Shortly before 2 p.m. we entered the village of Groumbelia, and here we supposed our jaded beasts would be allowed to enjoy the rest they sorely needed; but the driver appeared to know better, for after an interval of a few minutes off we started again. Groumbelia is a collection of straggling, unattractive huts, and is altogether a poor place. In twenty minutes we reached Tourki, a miserable village, with a dilapidated well and gardens hedged in with prickly pears, and surrounded by olive-groves. We now observed, scattered over the fields to right and left of the track, some thirty or more large blocks of cut stone, remains of some Roman buildings; but on examination we failed to discover any inscriptions, or a clue to the name of the place. At 3.15 p.m. we crossed the river Tebournok, now dry and bridgeless, and a few minutes later observed, to our right, at about a mile from the road and on rising ground, the ruins of a fortress, apparently of Byzantine construction, with a koubba in the middle of an olive-garden. Here the pasture

seemed rich, and flocks were abundant. Shortly before 4 o'clock we passed over the dry bed of the Oued Defla, close to a picturesque well with a cluster of palm-trees, and immediately afterwards, to our right, the remains of a Roman town on the banks of another dry watercourse. In another half hour we reached the Bir-el-Arbain, or 'Well of the Forty,' and, as the sun was nearing the horizon, entered a vast forest of arbutus, juniper, dwarf pines, furze, and other shrubs. This is a wild and romantic district. A good ten miles had still to be accomplished before reaching our night's quarters, and, as our horses were quite tired out, the prospect of being benighted in this wilderness was not agreeable. However, our coachman urged on without intermission his sturdy little animals, and at half-past 6 o'clock, as darkness was closing round us, we drove into the fondouk of Bir-el-Bouïta.\*

The scenery between Tunis and Bir-el-Bouïta is nowhere grand, but it is diversified—at times picturesque, at others exceedingly wild; the route was animated by strings of camels, Arabs on mules and donkeys, carts loaded with merchandise, and an occasional carriage like our own; the air was clear and

---

\* V. Guérin, who, in February 1860, followed the same route, and to whose admirable and erudite work we would refer our readers for a more detailed description of the district, was much struck with this wild and lonely spot. He writes:—'From the roof of the caravansary I gaze for a long time on the surrounding scene, illumined by a magnificent moon. On one side, the little town of Hammamet, with its gardens and its gulf; on the other, a vast wood in all its solitude, lie unrolled before me. The silence of the night is broken only by the plaintive cries of the jackals, answered by the barking of dogs from a neighbouring douar. As long as I was in Tunis, in the European quarter, I had not, so to say, entirely left Europe; here I am, indeed, in the heart of Africa.'—*Voyage*, i. 81.

genial, and a good road was alone wanting to render the journey enjoyable. Considering the importance of the traffic between Tunis and Soussa, the chief commercial towns in the beylik, it seems incredible that no proper road should exist.

The fondouk at Bir-el-Bouïta, which, in comparison with other similar establishments in this country, is of a luxurious description, struck us, notwithstanding, as by no means a comfortable lodging. The Tunisian caravansary closely resembles the rest-house of North China, consisting simply of a large square court-yard, surrounded by a number of small apartments or cells, all opening into it; the former destined for quadrupeds, the latter for their owners. No furniture of any kind is to be found in these wretched hovels, nor is any accommodation procurable. In the fondouk of Bir-el-Bouïta, on the other hand, the human habitations, some six or eight in number, are on an upper floor, and open on to a flat roof; they are consequently well away from the animals. Further, they are furnished with a bed-settle and rough mattress, a rickety table, and a chair or two. The Arab who had charge of this establishment was profuse in his attentions, and desirous of giving satisfaction to the utmost extent of his very limited means. He brought us some live charcoal in an earthen pot, an amphora filled with very doubtful water, and a couple of empty bottles to serve as candlesticks. This done, he left us with a satisfied look, as if he would have said: What more can the noble travellers possibly require? We cooked our modest supper from the provisions we had brought with us, regaled ourselves with a cup of tea, and, rolling ourselves up in our rugs, soon fell asleep.

The next morning a brilliant sun awoke us to the

pleasant consciousness of another glorious day, and, getting the horses out at sunrise, we were on our way again before seven—the air chilly, but clear and invigorating. Our route ran but a short distance from the seashore, vestiges of Roman buildings being everywhere visible landward. In half an hour we reached a Roman mausoleum, now called by the Arabs, Kasr-el-Menara, or ‘The Lighthouse.’ Its situation on the gentle slope of a hill, and in close proximity to the sea, suggested to them, no doubt, the idea that in former days it might have been used as a beacon; but of this there is no evidence. It is of circular form, about 48 feet in diameter, and stands on a square base: the present height may be estimated at 34 feet. Altogether, this monument bears a strong resemblance, though on a smaller scale, to the tomb of Cecillia Metella, near Rome. Shaw, the traveller, speaks of three inscriptions, or votive tablets, to be seen on the face-work; but these have entirely disappeared, as well as nearly every block of facing-stone that the Arabs could remove with the aid of their miserable implements.

From the numerous Roman remains in the vicinity of this monument, it would appear that the whole district was once thickly populated. Here we observed several bushes covered with shreds of rag, which we had not before noticed in Tunisia, although the custom is common in Algeria.\* At a quarter-past 8 o'clock we crossed the Oued-el-Kenatir, over a modern bridge of two arches, by the side of which are the ruins of one of Roman construction of twelve arches, showing how much more important the river must have been formerly, and how

---

\* Consult *Mœurs, Coutumes et Institutions des Indigènes de l'Algérie*, par le Capitaine Villot. Constantine, 1871.

entirely the face of the country has changed since the time of the Roman occupation. Indeed, not only here, but along the whole coast of Tunisia, alterations of surface during many centuries, changes in the shore-line and the formation of marshlands, owing to long neglect of the courses of rivers and of mountain streams, have altered the aspect of the country, and rendered the identification of ancient towns a matter of considerable difficulty. Another modern bridge of three arches spanning the Oued Crosha was crossed at 9 a.m. At this point the road branches off; that to the right in the direction of Sidi-Khalifa, the ancient Aphrodisium, the Arab town of Dar-el-Bey; that to the left, over a flat marsh lying between the sea and the shallow lagoon, in that of Sebkha-Djiriba; both uniting again at Herglah. We had instructed our driver to take the former track, because it followed the old Roman road, and, although a longer route, was preferable to a journey over the marsh. In this country one cannot travel without reliable maps. What is more important still, you must rely upon yourself and not trust to the natives, even for ordinary information; if you do, you will probably discover the error when it is too late to rectify it. For more than five hours did we plod wearily over this terrible marsh; our courageous little horses moving at a walking pace, and frequently coming to a standstill through sheer inability, without the aid of the driver and his companion; to extricate the wheels, half-spoke deep, from the tenacious mud. As for ourselves, we preferred to lighten the vehicle, and, for nearly two-thirds of the distance, proceeded on foot, dragging one leg after the other wearily enough, and then resting for a few seconds to brush off the clinging mud against the rough scrub that dotted the marsh at short intervals. Along this portion of the route,

frequently below the sea level, there is nothing whatever of interest. About midway there is a French military post (a rest-house, we suppose, for benighted travellers), and further on we passed a cheering object to break the monotony of the journey—a dead donkey, while troops of flamingos were disporting themselves on the banks of the lake. At 3 p.m. we halted before a fountain at the foot of the rising ground on which the small Arab town of Herglah stands. For eight long hours had our poor horses been plodding along without a moment's rest, a drop of water, or a mouthful of food. The indomitable courage and endurance of these wiry little animals are marvellous. Here, at the well, women were drawing water, while others were going to and fro with large amphoras gracefully poised on their heads or shoulders.

A miserable village is Herglah, altogether unattractive; and yet to one emerging from the desolation of the marsh over which we had just passed it presented itself almost as an oasis. Although the soil consists of nothing but sand, the village is surrounded by olive-gardens, groups of cactus remarkable for their venerable appearance, and numerous low green bushes, bearing a small yellow fruit, in appearance not unlike diminutive lemons. This is the *Horrea Cœlia* of the Romans, and was once a busy sea-port. Here we remained an hour to rest our horses.

Leaving Herglah at 4 o'clock we soon reached, over a stony road, the banks of Sebkah-Halk-el-Menzel, another shallow lake; and at Oued-Kenatir, further on, we crossed a bridge approached on both sides by a long paved causeway. It was now 5 o'clock, and the sun was already sinking below the horizon; we were fortunately on firmer ground, but still at a considerable distance

from our destination. In these latitudes twilight is unknown, and darkness sets in almost immediately after sundown. Our driver seemed doubtful about the road, or was perhaps anxious as to our safety, for he caused his attendant to alight and go forward with a lantern. In this manner, and with horses thoroughly tired out, we moved at a walking pace, thankful to arrive at the gates of Soussa at 8 p.m.

We had accomplished a long day's journey (thirteen hours), as wearisome and tedious as it was long. After leaving the Kasr-el-Menara we had encountered absolutely nothing of interest, and had to bear the disappointment of seeing on the opposite side of the marshy lake the site and some of the ruins of the ancient town of Aphrodisium. The town, of which there are numerous remains, extended for nearly a mile. Beautifully situated on several low hills, and surrounded by olive-woods and gardens in high cultivation, it attracted the attention of the Vandal kings, and remained a royal residence till the armies of Belisarius cleared the land of this scourge of North Africa. Aphrodisium is now a confused mass of stone and rubble. The palace is marked by an enclosure constructed with huge blocks of stone; its triumphal arches, with the exception of one which has no special features, are overthrown; the temple, supposed to have been dedicated to Aphrodite, is scarcely traceable; weeds choke the stream that once ran pleasantly through the town; the surrounding woods and gardens have disappeared, and miles of swamp and reeds hide the line of the seashore.

Possibly in the summer, when the soil is dry, travelling over the Djiriba marsh may be attended with less difficulty and inconvenience; but as no water is procurable, and as it is without shade or any habitation except the

military station already noted, it must be an unpleasant track to traverse at all seasons\*—in winter, or after heavy rains, it is absolutely dangerous. The traveller by road should always take the other track before mentioned.

\* V. Guérin, who, following the same route as we had done, but early in the month of February, was inconvenienced by heat and gnats. Mme. de Voisins speaks of the wonderful mirages which are frequently to be observed on the marsh. She affirms that on one occasion, while passing over it, she, her servant, and her horse, were repeated *ad infinitum*, the three alone forming, as it were, an interminable caravan, while on the horizon there appeared a grove of palms and a city. We ourselves can bear testimony to this last illusion. A great white city, on the banks of a distant lake, was clearly outlined on the horizon.

## CHAPTER X.

### SOUSSA, THE ANCIENT HADRUMETUM.

*November 10th and 11th.*

A SORRY PLACE — AN AGREEABLE RECEPTION — ROMAN SHAFTS —  
KOUBBAS—DOORWAYS—ARAB JEALOUSY OF RELIGIOUS BUILDINGS—  
SOUKS — FLIES — DRESSES OF THE WOMEN — ARAB MUSIC — THE  
MARABOUT CAFÉ—THE 'MARSEILLAISE'—ARAB POLITENESS—STORY-  
TELLING—A BOUQUET.

**I**N spite of its commercial importance and proportionate wealth, Soussa, the second town in the Regency, is a disappointing place, offering neither resource nor attractions for the traveller. From the sea, as we had afterwards the opportunity of observing, its aspect is remarkable, rising like a whitened pyramid from above the water's edge, and culminating as usual in the walls of the Kasba and the elevated watch-tower of the citadel. Once within its gates all the charm is dispelled. It is enclosed with a crenelated wall common to all Tunisian cities, and entered through several gates, some of which, especially that giving access to the quays, are curious and characteristic. Its streets, narrow, tortuous, and ill kept, lead from an open space in close proximity to the harbour, where the European hotel is situated, past a mosque in no respect remarkable, up to the Kasba, the chief feature of which is a painted gateway more curious than beautiful. The view from the Kasba is very extensive, and embraces an illimitable sweep of land and water.

Our first visit was to Captain Hélouis of the staff,

for whom we had letters of introduction, and who received us with that urbanity which we experienced at the hands of every French officer with whom we came in contact throughout Tunisia, furnishing us with maps and much valuable information for our journey into the interior. The reception was the more agreeable as the captain is a perfect master of the English language. Having determined upon our future operations, as far as anything could be determined beforehand in a country in which travelling forms more or less a chapter of accidents, we found no difficulty in filling up the two spare days at our disposal.

Here, as in Tunis and other towns of the Regency, the angles of buildings are frequently formed with shafts from some Roman temple or other monumental work. We know that the Romans had an architecture of their own, and adopted a style by which their presence has been identified at some period or other in various parts of the then known world. It is equally certain that the Arabs, who have possessed this country for more than twelve centuries, have not only for a long period evinced little knowledge of building construction, but have shown an utter disregard for beauty of form, and even for fitness, in all their later edifices, whether public or private. Not unfrequently one meets with Roman shafts reversed, the richly carved capital, whether of stone or marble, forming a base for some other piece of purloined material, or for a superstructure of stone and earth, put together at random, the ill-constructed mass being coated over with the never-failing whitewash.

There is no single building in Soussa, public or private, of modern times, to arrest the traveller's attention. Even the Grand Mosque may be passed by without the stranger knowing that it is a mosque. One or two

koubbas are curious, and the doorways of the larger houses have frequently some merit of design. None of these can be classed as modern works. The doorways of Soussa are, as a rule, different in design from those either at Tunis or Sfax, leading one to suppose that during a certain period of Arab history, many centuries ago, a traditional treatment was observed. In the example we have given the quaint form of the upper lintel, with its rich carvings and the arched recesses over it, produces an effect that is far from disagreeable. The door of olive-wood is painted red and green, the colours of the Prophet. The other devices, including the crescent, the star, and the sword of Mahomet, being painted white, on either a red or green ground.

The jealousy with which the Arabs guard their sacred buildings from the profane touch, or even look, of the unbeliever, may be illustrated by what happened to us when making a drawing of this doorway. It is that of a mausoleum of some marabout, or holy man; and through the small grated windows on either side of the door can be seen the saint's sarcophagus surrounded by banners and other paraphernalia. While this sketch was in progress, the shutters with which the windows are provided were suddenly closed from within, so that our view of the interior was cut off.

The souks, with less display than those of Tunis, are equally busy and characteristic. The costumes and types which one meets with, however, are less diversified, and the shops seem to be chiefly in the hands of Arabs.

The great pest of Soussa is the flies; even at this cool season they were very troublesome; what they must be in summer it is painful to contemplate. They are only kept under by constant whitewashing, which

goes on here even more diligently than in the capital. This also has its drawback on account of the glare, undoubtedly the cause of much of the ophthalmia and blindness so prevalent here and in other seaport towns.

The Arab women of Soussa envelop themselves in a black *bernous* of thin woollen material, which entirely covers their heads as well as their bodies, and gives them the appearance of nuns; their faces are, of course, hidden, although they are able to see through the open texture of their head-gear. The Jewesses, on the other hand, indulge in gayer apparel here than elsewhere, and display the beauty of both face and form with great freedom. Their costume is, in fact, so remarkable, that it will not fail to strike with astonishment every traveller who sees it for the first time.\*

---

\* Rather than attempt a more minute description of the female costumes seen in Tunisia, we prefer to offer our readers the details furnished by a lady, whose knowledge of such matters must of necessity be superior to our own. Mme. de Voisins writes: 'The women have not, like those of Algeria, the wide Turkish trousers, reaching to the ankles, but tights (*un maillot*). They do not wear the white *kaik*, or *k'ssa*, under which the Moors in Algeria have something mysterious and attractive, but a frightful black veil, *adjar*, enveloping their head, the upper part of the body, and which they hold stretched out by extending their arms horizontally on a level with the waist, in order to enable them to see where they are walking, a fashion as ungraceful as it is inconvenient. Thus attired, in the streets they have the appearance of veritable bundles.

'The countrywomen (*femmes des tentes*) are clothed, like the Bedouins of the province of Constantine, in a wide gown (*sazou*) of wool or cotton, reaching down to the knees, attached at the waist by a girdle, a bit of cord, a leather strap, or, unheard-of luxury! by a silk handkerchief rolled up. This gown serves them, at one and the same time, as a shift, a petticoat, and a robe; they have neither stockings nor shoes. Their headdress consists of a rag of stuff, which they wear in the Creole fashion. One can see nothing more primitive than this costume, under which these women with a copper-coloured skin, black

JEWISH GIRLS, TUNIS

---

In Soussa we had the opportunity of hearing Arab music, an enjoyment we had not experienced since we left Algeria. The most important native café of the place is in the centre of the souks, and consists of a large circular chamber with a high vaulted roof. It must have been originally a koubba. It is entirely without decoration, and with no other furniture than a continuous low wooden platform around the walls, one or two benches in the middle of the room, a stand with a large amphora, and a small stove for preparing the coffee. The walls are blackened by smoke, and the whole place bears the appearance of never having been swept or cleaned since it was built, very many centuries

---

eyes, white teeth, find means, nearly all of them, to look pretty, and to display forms worthy of antique statuary.

‘The Israelitish women dress in a manner as little decent as it is uninviting. If I did not fear to seem puritanical, I might add that their way of dressing is emblematic of their morals, of which the laxity surpasses anything one sees in Europe ; but the men, not more austere themselves, profess on this score an indulgence and a *laisser-aller* more extensive than the courtiers of the *Œil-de-Bœuf* under Louis XV. The Jewesses wear, then, in the town of Soussa, a gauze shift, light and transparent, with wide sleeves, tight round the body, and of which the lower part, very short, is hidden under a pantaloon of rich silk, or of simple calico for the women of the lower classes, fitting as closely as tights, and very richly embroidered from the part which forms the garter above the knee to the ankle, where it terminates. Over this clothing is thrown a partially closed jacket, unlined, with braces instead of sleeves to hold it at the arms, very sloping on the breast, and sufficiently open so as not to debar an indiscreet observer from distinguishing under the gauze shift those charms which it in no way conceals. The lightest silks, the brightest colours—green, pink, yellow, sky blue, cherry red—are employed for this elegant tunic. The headdress consists of a silk handkerchief worked with gold, worn in the Egyptian manner, on the top of the head, above false hair, for the Mosaic law prohibits married women from making a display of their own hair. Whatever may be their shortcomings in the practice of other ordinances, the Israelite ladies respect this precept, and procure from Paris or Marseilles

ago. On our entrance some thirty men were reclining on the benches, and the establishment might be considered fairly full; but room was at once made for us with that politeness and almost stately decorum which one cannot fail to admire among the Arabs. Three musicians occupied one of the benches, sitting in a row, cross-legged, tailor-wise. Their instruments were a mandoline, a violin, and a tambourine. He of the tambourine commenced an old Arab ditty about love and sentiment, in which, as our interpreter explained, the moon and the stars were frequently invoked. His voice was a high tenor, and he frequently broke into a

---

chignons and frontlets, which enable them to elude the severity of this prohibition. For foot-gear they have elegant high-heeled slippers (*mules*) of morocco, or of velvet embroidered with gold, adorned sometimes with precious stones.

‘Such a costume surpasses all the extravagances and disguises of fairy art. At Soussa one is so accustomed to it that no one regards it with any attention. Whence does it originate? Who invented it? An Adamite without doubt, or some beautiful girl troubled by the heat of the climate, and so formed that she need not fear the most exacting scrutiny. Observers may find at Soussa ample matter to satisfy their eyes: one does not see a disproportioned body (*taille*), or a badly shaped limb. All is as it should be, according to the respective ages, and criticism is impossible. Stays, dresses fitting too tightly, and other exigencies of European fashion, have not deformed or distorted anything, the shapes are as Nature made them—admirable. The Venus of Milo is no myth at Soussa; and when I saw passing before my door women so simple, so ingenuously natural in their quasi-nudity, I asked myself which was the less indecent, their costume or that of our Parisian women, who exaggerate at one time certain parts of their body, and at another wear tightly-fitting garments, more unchaste than the nude itself.’—*Excursions dans la Régence de Tunis*, p. 146.

The above description, detailed as it is, is not altogether complete. The Jewish women frequently wear on their heads a pointed or conical-shaped silk cap, of some bright colour, embroidered with gold and stiffened with cardboard: this they keep in position by means of an embroidered silk handkerchief bound tightly round it.

falsetto. His prolongation of the notes was extraordinary, playing with them as it were, and sustaining them with a continuous *tremolo*. His own instrument was laid aside during the solo, but he was assisted by the mandoline. The accompaniment was of longer duration than the song; *i.e.*, after the voice had ceased at the end of each couplet, or verse, the instrument took up and continued the melody, playing with it as the voice had done, and varying it in a style to which we have no equivalent in Europe. The effect of a treatment so strange and novel was not in the beginning altogether pleasant; but the first shock of surprise over, and our ears somewhat accustomed to sounds so foreign to them, we listened with delight, unable to determine whether the voice or the instrument afforded the greater satisfaction. The song was classical, poetical, and thoroughly moral in sentiment. Scarcely had the solo ceased than the three musicians burst forth together in a modern, popular song, each one playing his own instrument at the same time. It differed entirely from what had just been sung, and was of a jovial, not to say boisterous, character. During the whole performance the audience displayed no emotion, no sign of approbation, or the reverse; they sat listening calmly, without moving a muscle, without a smile, without an attempt at applause. To convey to an European an exact idea of this music is most difficult, if not impossible, as it does not follow in any way the rules or methods recognised in our schools. It has, however, a rhythm and sequence which are soon understood and appreciated; the notes are slurred and blended together, and the motive appears to terminate abruptly on the leading note. The only kind of European music with which it might be compared is that of the gipsies of Hungary;

as with them no notes are used, no time is beaten, and the performance seems to be entirely by ear; it is not, however, martial, but plaintive and sentimental. With less reserve than the native portion of the audience we had more than once applauded the entertainment. This the performers seemed to appreciate, and in their turn wished to pay us a compliment. Evidently taking us for Frenchmen, they struck up the *Marseillaise*; but this we really could not suffer, and at once begged our interpreter to explain that we were English, and that the air which they were playing belonged in no way to us. They immediately changed their tune to something of a nondescript character. It could scarcely have been Arab, and it certainly was not British.

We now begged our entertainers to accept some refreshment at our expense; this they at first refused, but eventually each partook of a glass of lemonade, and, retiring with a deferential salute, departed to continue their performance at some neighbouring establishment.

There is a decorum, a self-restraint in the Arab very pleasing to contemplate. No pushing, no prying, no intrusion, no molestation of any kind. They did not seem to be disturbed by our presence, nor did any one disturb us. After a few minutes we felt as much at home as we should have done in any English place of entertainment. And yet we were probably as strange to them as a couple of Chinamen would be in a London music-hall; whether they would fare as well as we did is doubtful.

On our way home we paused for a short time before another café, where an entertainment of a different kind was being held. Through the open door we could see over the length and breadth of the room. It was quite full, or, as we should say, crammed, for squatting

Arabs, unencumbered by clothes, occupy but little space. One old Arab, with stick in hand and seated on a chair raised somewhat above the other guests, was telling a story. The same immovability of feature and apparent stoical indifference were observable on the countenances of his hearers, as we had already remarked in the café we had just quitted. As we stood before the door with that awkward stiffness which every Englishman must feel in the presence of Arabs, but of which he is unable to divest himself, the master of the establishment motioned to us to enter; this we declined, being loth to disturb the attentive listeners, and not understanding what the story-teller was narrating. Behind his right ear was a small bouquet. Offering each of us a similar posy, he saluted us with a polite bow. This custom of wearing flowers, prevalent throughout the whole of Tunisia, is as peculiar as it is charming. It is practised by the men, never by the women. The flowers used vary according to the season, rosebuds or small yellow flowers being preferred. The form of the bouquet itself never varies: it is in three stages—the top one consisting of a single flower or bud, the second of three or four, and the lower one of several. The flowers in the same bouquet are all alike. The bouquet is worn on the right side of the head, stuck under the turban, and above the ear.

## CHAPTER XI.

### MSAKEN.

DOUBTFUL INFORMATION—A GOOD COACHMAN—ANOTHER BOUQUET—  
KSIBA—A LOVELY VIEW—A CONSCIENTIOUS GUIDE—THE WALK  
ROUND MSAKEN—OUR DISAPPOINTMENT—THE MOSQUE—NOTHING  
TO SEE IN MSAKEN.

**T**HERE is not much in Soussa to detain the traveller. Our main occupation was to acquire information as to our future movements. This accomplished, as far as its accomplishment was possible in a land of uncertainties, we found ourselves (November 11th) with a spare afternoon and a blue sky overhead. Having read glowing descriptions of the town of Msaken,\* an hour and a quarter's drive from Soussa, we decided to pay it a visit. These eulogies not having been confirmed by the few people in Soussa whom we had questioned, we attributed their doubtful or even negative replies to want of knowledge; and our curiosity being aroused, we determined to see for ourselves what

---

\* Msaken is described by M. Reclus as a town (*bourg*), eleven kilomètres south-west of Soussa, surrounded by a thick forest of olives; it was formerly a holy place, of which the entrance was forbidden to Jews and Christians.—*Nouvelle Géographique Universelle*, xi. 228.

Madame de Voisins, who seems to pride herself more on the smartness of her style than upon the correctness of her general information, calls Msaken a '*centre de population*,' a '*lieu saint*,' and the Seville, the Padua, the Oxford, the Cologne of Tunisia. But then she had not visited the place, as she herself owns—a proof how imprudent and misleading it is to write about anything one has not seen.

Msaken was really like. We started immediately after lunch ; the four horses, which were harnessed abreast to the carriage we occupied, fairly squeezed themselves through the narrow gateway of the town, and dashed past the grain-market and Arab cemetery just without the walls. They were fresh, and our coachman was evidently bent on making a good impression, and showing how well they could do their work. The balmy air and the aromatic odour of the herbs on the plain, as we emerged from the olive-groves with which Soussa is surrounded, were most enjoyable after the stuffy and not very sweet-smelling streets of the town. Our Jehu was a first-rate whip, and the skill and dexterity with which he piloted us over the roadless plain, across grips, between trees, and along the edges of precipitous banks, without overturning the vehicle, were truly marvellous. His horses understood him better than we did, for the gift of tongues had not been vouchsafed him ; he was, however, possessed of the usual politeness, and as we stepped into his carriage at starting he presented us with a bouquet similar to those given us by the host of the café on the previous evening.

The first object which struck us on the road was a Roman cistern, of no great size but still in use. The French barracks at Soussa are outside the walls, adjoining the Kasbah, and consist of some twenty small brick-built houses. Passing these, after a slight ascent, we crossed an open space, from which the olives have been cleared. This is the spot where the French encamped when they took Soussa, and the marks of their tents are still traceable. One miserable village, Ksiba, is passed about half-way between Soussa and Msaken ; it has two koubbas and boundless filth ; one or two olive-mills attest its sole industry.

As one traverses the higher ground in this direction the view over the immense sweep of plains, partially cultivated, but for the most part covered with olive-plantations, is very striking, and eminently African.

We had not penetrated far into the town of Msaken before our driver halted in front of a small house open to the street, and not unlike a shop in the souks. Here some four or five well-dressed men were seated. Permission, it seemed, had to be obtained in order to visit the town. This was soon granted, and a one-eyed Arab of solemn demeanour was appointed to escort us. No word was spoken; like lambs we followed our stately guide through street after street under a broiling sun, or, better said, alley after alley, each one differing from the other solely in the greater or less quantity of mud and filth with which it was encumbered. Few people were astir at this hour, between 1 and 2 o'clock, when none but dogs and Christians are supposed to walk abroad. A few children, however, watched us with curiosity; and a woman or two, enveloped in coarse brown garments, passed us by on the opposite side of the street. The occasional creaking of a door drew our attention to the fact of its being ajar, and of our being gazed at by mysterious, inquisitive inmates, but of which sex it was impossible to determine. For a good half-hour had we silently, patiently, resignedly, followed our one-eyed guide, evidently a conscientious man, bent on thoroughly doing his duty—on taking us strictly and literally *round* the town. Nothing, absolutely nothing had we seen but blank walls—not a single building approaching even to mediocrity. The sun's rays were disagreeably powerful, and the mud did not always admit of our taking the shady side of the way, even when the walls were sufficiently high—not always the case—to afford any shade.

We began to make signs to our implacable conductor that we had had enough of bare walls and glare. He could not, or would not, understand our pantomime, and kept us steadily on the march, until, fortunately, as we turned a corner, we perceived our carriage at the other end of the street, and unhesitatingly made for it, leaving our *cicerone* to follow or not as he thought fit. By means of many words and more dumb show we made the solemn old gentleman, who had accorded us permission to visit the town, understand that we had in fact seen nothing—that it was the inside of the Mosque which we wished to visit, not the outside of the houses. A smile, a malicious one it appeared to us, passed over his countenance, as if he relished our discomfiture. Nevertheless, he waved his hand in the direction of the Mosque, and spoke words conveying doubtless an order that our request should be granted. In spite of this our guide seemed very loth to let us even approach the sacred edifice. Without more ado, however, we passed under the portal and across the outer court which led to the door of the prayer-chamber, whence we were able to obtain a good view of the interior. This mosque differs in no respect from others in Tunisia; the interior is supported by sixteen Roman shafts of different diameters, and of various descriptions of stone, surmounted by capitals of various designs and quality of carving; the mihrab is a simple recess; no traces of Arab work of any description are visible. A few devout men were worshipping; we thought it better not to disturb them, but preferred to remain at the doorway, especially as it commanded the whole interior of the mosque, covering a square of about fifty feet each way.

Instead of finding in Msaken, as we were led to expect, a university or a seat of learning, we found the place

scarcely a town at all, but rather an overgrown agricultural village, in which olive-pressing and corn-grinding alone occupy the inhabitants. Its extent is, however, great, for it covers perhaps as much ground as Soussa itself. The only noticeable peculiarity was the construction of the entrances to private houses; they consist of a large covered porch, forming an open outer gateway, and furnished with brick benches on either side. Apart from this, the houses externally have the same mean appearance common throughout Tunisia. Many of them seemed to be unoccupied and falling into ruin. Altogether there is a sadness and a forlorn aspect about Msaken which are quite depressing. Interest, if there can be any in such a place, is centered in the fact that it is still unsophisticated and quite untouched by European civilisation.

Our afternoon was by no means wasted; we had enjoyed a pleasant drive, had satisfied our curiosity, and had been able to note for ourselves (experience which the traveller has frequently to acquire) one place in Tunisia not worth a visit.

## CHAPTER XII.

### EL-DJEM, THE ANCIENT THYSDRUS.

*November 12th and 13th.*

DEPARTURE FROM SOUSSA—A LOVELY MORNING—ROUGH TRAVELLING—ROMAN RUINS—A BEAUTIFUL VIEW—MENZEL—LAKE SIDI-EL-HANI—ZRAMEDINE—OLIVE-CRUSHING—PLOUGHING—FIRST GLIMPSE OF THE AMPHITHEATRE—THE GREAT PLAIN—BIRDS—THE FONDOUK—THE CAFÉ—ARAB POLITENESS—RATS—THE VILLAGE OF EL-DJEM—DESCRIPTION OF THE AMPHITHEATRE—REFLECTIONS—ES SAHEL—MAHEDIA.

**W**E had decided to start for El-Djem at 6 a.m., and our carriage was before the door to the minute. It was not so easy, however, to get away from the Hôtel de Paris at so early an hour. No one was about on our emerging from our bedrooms; and it was not until we had lit the kitchen lamp, and made some commotion in the house, that the waiter came out of the hole in the wall which served as his sleeping apartment. By half-past six, however, we were on the road.

It was one of those lovely mornings common enough in this country, but not to be experienced in Europe, or, at any rate, in England. The sun had not yet risen, and the stars were still bright. The air, chilly at so early an hour in the month of November, was clear and lucid. The dew was thick on the ground, and there was every indication of the continuance of fine weather. As we skirted the Arab cemetery close to the city walls, we

observed a group of women clustered round a grave, where they had probably spent the night. The village of Zaouiet, through which we had driven the previous afternoon, was passed at 7 o'clock; and then turning to the left, we took the direct road to El-Djem. At half-past seven we passed, to the left, the extensive remains of a Byzantine fortress; but the dilapidated state of its rubble walls furnished no clue to its origin or extent. To the right vestiges of numerous houses were discernible.

For several miles we continued among the olives which surround Soussa on the land side—a fact of which we had unpleasant reminders in the constant jolting over the grips and ridges formed to retain every drop of rain-fall. A quarter of an hour more brought us to the remains of another fortress on the right, but of no importance. At 8 a.m. we alighted to examine, at a short distance to the left of the track, a Roman cistern, about forty paces long and in four compartments, no longer in use. It is on high ground, from which the olives have been cleared. Turning round at this point, and facing the direction whence we came, a view of unparalleled extent and magnificence unfolded itself. The sun had now risen in great splendour, and the whole landscape was lit up and tinged with gorgeous colouring. The Mediterranean, a sheet of azure, lay to our right; and although some eight or nine miles distant, yet the ships riding before Soussa were clearly defined. Soussa, with its snow-white walls, surmounted by the watch-tower of the Kasbah, appeared like a pyramid of marble; and on the plain, embowered in groves of olive and cactus, lay the white villages of Zaouiet and Ksiba—the whole picture framed by a long range of receding hills, centering in the noble peak of Djebel Zaghouan.

Having partaken of nothing but a cup of black coffee before starting, hunger began to remind us that ruins and fine scenery were far from being necessities of existence ; so we unpacked our provision-basket and ate our frugal lunch under the shade of a spreading olive-tree. In a quarter of an hour we were again on the move.

Menzel, a poor village, closely surrounded by hedges of cactus, was skirted to our right at 10.15. An Arab and two women, almost the only people we had met since we left Soussa, were carrying wood ; or, rather, in fact, the women were laden with the wood, while their lord and master walked empty-handed in front of them. This is invariably the case. By 10.30 we had quitted the olive-groves, and found ourselves on an almost uncultivated plain of vast extent. At 11.15 Sebkhah-Sidi-el-Hani, some four miles off the route, opened out to our right. The banks of this great lagoon are flat and unpicturesque ; herons were flying overhead, and the far-distant hills were clearly visible.

Another hour's jolting over the melancholy plain, devoid of any kind of shelter, brought us to Zramedine, a small oasis of olives, palms, and cactus. The latter, which usually serve merely as hedges or enclosures, here form large compact groves. The trees are very luxuriant and of great age. Women with long cleft sticks were busy gathering the fruit, and stole furtive glances at us as we passed. We halted for a few minutes to refresh our horses at the village-well, where women were as usual loitering, gossiping, and drawing water. Close by, two Bedouin girls, dark-skinned and bright-eyed, but lightly clad, were grinding at a mill, or, rather, crushing olives between two large stones. We approached to examine their movements, propitiating them

with a few sous, which they eagerly accepted. They were not at all shy, and did not run away or desist from their labour; on the contrary, they were pleased at being noticed, and proud of their primitive occupation. It should be observed that the Bedouin women do not cover their faces. The women of the better class are usually richly clad, and bedecked with a great variety of silver bracelets and other ornaments. Ploughing was being industriously pursued all round Zramedine; and all kinds of animals—asses, cows, camels, yoked together indiscriminately—were employed at the work. The Biblical injunction, 'not to muzzle the ox that treadeth out the corn,' is little heeded by the Arabs. Any four-legged beast is equal to the light labour of scratching the surface with the rude implement that does duty for a plough. It is not unusual to see a camel and a donkey yoked together; when seen *en silhouette* on the horizon the donkey appears to be walking under the camel.

We now began to strain our eyes in the direction of El-Djem, which, from the distance indicated on our maps, ought to have been visible; but it was not till after another hour's drive that the great Amphitheatre was observed standing up on the plain like an excrescence on the horizon. Distances are so illusive in this wondrously clear atmosphere, that it is better, as experience taught us on many occasions, to trust to a map rather than to the eye in calculating the lengths of any section of a journey. Although this monument was clearly outlined, yet it took us fully two hours to arrive at the village which has sprung up at the foot of the great ruin.

The plain we had passed to reach El Djem is in many ways remarkable, and offers an interesting study to the geographer. At this season it is without water,

and clothed only with sparse and stunted scrub ; no vegetation, no trees, no habitations—nothing, in fact, to relieve the sad monotony of the landscape. The friable soil is rent in all directions by enormous fissures, now quite dry, but probably full of water after heavy rains. In width and extent these fissures vary considerably, but the average depth is about 10 or 12 feet, having almost vertical sides like a railway cutting. Around these yawning gaps, spread serpent-like over the plain, locomotion is somewhat difficult, impossible by night, and after heavy rains attended with considerable risk. In addition to the crested larks, which are so numerous in these parts, we had noticed during our day's journey herons, eagles, hawks, owls, linnets, and coveys of partridges.

In comparison with the fondouk which we were now to occupy, that at Bir-el-Bouïta was a palace. This wretched place consists of a series of chambers or stables around a court-yard on a level with the ground, and are used for man or beast indiscriminately. The one we occupied was nothing more than a long vaulted room, the unpaved and unboarded floor covered with the dung of animals and the refuse of former travellers ; there were no windows, and the rickety double door, which was full of holes, could not be shut. There was no furniture whatever, but, when we were known to be English, an unsteady table, covered with dirt and tallow, and a wooden settle, such as the Arabs use in front of their houses, converted the vault into an *appartement meublé*. A couple of lengths of old matting were spread on the earthen floor, a solitary candle was stuck in an empty wine-bottle, a brown jar filled with water was put in a corner, and the resources of the establishment were exhausted. The jar, or

amphora, he it remarked, had a rounded bottom like a soda-water bottle, and could not possibly be made to stand without support. The water which it contained was so brown and thick that we thought a mistake had been made, and, emptying it out in the open court-yard, desired that the jar might be refilled. This was done, but with no better result: the water was really not fit for washing purposes. The modest cold collation which we extracted from our provision-basket was soon despatched, and we sallied forth in quest of coffee. The meanest village in Tunisia boasts its café, nor is that institution, so dear to the Arab, wanting in El-Djem. It is, in fact, a very noteworthy and even picturesque little nook, occupying one of the lower arcades of the Amphitheatre, and forming part of this stupendous ruin. Some ten or twelve Arabs immediately made room for us as we entered. One young man, quite a scholar, for he spoke a little broken French, addressed us. 'Were we French?' 'No, Englishmen; friends of all Mohammedans.' A gleam of satisfaction was visible on the countenances of the company, one of whom was a green-turbaned Hadji, as our interlocutor communicated to them our reply. Coffee was brought us by a dark-skinned man in a coarse brown gaberdeen, handing the cups with a grace and dignity peculiar to his race. He, nevertheless, pocketed with equal graciousness and no less dignity the silver piece which we proffered without offering any change, thus allowing us to pay five times as much as the coffee was worth. At the further end of the café, exactly under the vaulted arch of the Amphitheatre, sat an old man sifting coffee. He was clothed in a few rags only, and appeared to be the butt of the village, for jokes were passing evidently at his expense. Undisturbed either by the raillery or by our presence,

the veteran continued his occupation until, the portion duly sifted, he handed it solemnly to the proprietor. We pitied the old man, and offered him a cup of coffee. Without a word of thanks or the least expression of surprise he accepted, and, cup in hand, sat down, gazing at us silently and attentively. Soon after we took our departure.

We had loitered among the ruins until it was quite dark, and had to pass through the village in order to regain the fondouk. In the first narrow street we entered, a dog, one of the nuisances of the country, came out of a doorway, snarling and barking at us. We insensibly grasped our sticks and prepared for defence. To our surprise, our old friend of the café, who had been waiting for us, stood at our side. He walked before us, quieted the dog, and accompanied us to our lodging, at the door of which he saluted us, and, placing his right hand on his breast, departed with a grandeur of deportment worthy of a prince.

We had been warned against fleas in the caravansera of El-Djem, but were fortunate enough not to be thus molested; possibly the time of year not being propitious to these little tormentors. Vermin, however, of an equally pertinacious and more obtrusive kind, did not fail to worry us—rats. Should any of our readers have the misfortune to pass a night where we did, we would advise them, before retiring to rest, to leave out, at some spot as remote as possible from where they are lying, provisions sufficient to occupy these rapacious animals until the morning. Nor must they stint the measure, for their number is legion. They emerge from holes in the wall high up out of reach, and the agility with which they clamber up the rough stones is marvellous. Nor are they at all shy, but, confident of their ability to

elude pursuit, they do not hesitate to pay their visits in broad daylight. Several times did we shoot at them with our revolvers, but without picking any of them off. The braying of asses, the barking of dogs, the scrambling of rats, were the sounds which enlivened our night's rest, and made slumber cheerful, to say the least of it.

Our inspection of the Amphitheatre during the previous afternoon had been incomplete, and we were among the ruins at sunrise. At every step we had to pick our way, for the edifice is now converted into the stable and *cloaca* of the village—a fact which does not prevent the streets, almost the doorsteps of the houses, from being similarly befouled. In the middle of the village is a well, only a few feet deep, from which the inhabitants draw their water; its brink is slightly below the level of the streets and unprotected, so that with every rain-fall all the filth of the place must flow into it.

But enough, more than enough, about the village and fondouk of El-Djem. Let us now return to the Amphitheatre of ancient Thysdrus, upon which the miserable modern dwellings are literally grafted, the lower arcades on one side, which is in a fairly perfect condition, being used by the Arabs as shops and stables.

Few remains of ancient civilisation are more calculated to rouse the imagination and awaken in the beholder's mind serious meditation than this stupendous Amphitheatre of Thysdrus—not even the Coliseum at Rome, with which it has the most affinity, and to which it stands second in size, in grandeur, and in architectural pretensions. If the associations of the latter are more numerous and of greater historical importance, the monument of Thysdrus is enshrouded with mystery infinitely more calculated to call forth suggestive reflections.

When, and by whom was it built? Was it ever finished? Did the combats for which it was destined ever take place within its walls? Has its partial destruction been wholly effected by the hand of man or by natural causes? What was the extent of the city of Thysdrus, and of what materials were its houses constructed? How was it supplied with water? These considerations suggested themselves as we wandered among the arcades; and when, having succeeded in reaching the upper storey (climbing on hands and knees over the dilapidated vaulting which once supported the steps), the immensity of the structure, rearing its colossal form on the edge of a treeless, waterless, inhospitable plain, became apparent.

Like other great amphitheatres of the Roman Empire, the divisions and arrangements of the one at Thysdrus possess no distinctive features. Externally there are three tiers of open arcades, of varying dimensions, surmounted by an attic, similar to the better known example in Rome. There were two principal entrances, one of which is entirely destroyed. The ranges of seats in the interior have long since disappeared, and the arena is choked with earth and a confused mass of stone and rubble. The extreme major axis may be estimated at 489 feet, and the minor axis at 403 feet. Assuming that the attic was intended to be of the same proportionate height as its prototype in Rome, the total height of the external wall, measured from the ground, would have been 124 feet 6 inches.

Guérin shares the opinion of Shaw, who remarks:—

‘It seems to have been built about the time of the Antonines, agreeing exactly in proportion and workmanship with the buildings of that age. And as the elder Gordian was proclaimed Emperor at this city, it is not improbable that, in gratitude to the place where he received the purple, he might have been the

founder of it.\* Upon one of the medals of the younger Gordian we have an amphitheatre, not hitherto accounted for by the medalists; but it may be too peremptory perhaps to fix it here at Tisdra.†

There are many indications in the structure itself that it was never finished; and it may be stated, without controversy, that the attic or top storey was only begun. The amphitheatre may have been sufficiently advanced to admit of performances being held, and wooden benches may have been temporarily provided for the spectators. The key-stones of the lower tier of arches, which were intended to carry carvings in relief, are left in a rough, unornamented state, with the exception of two on the north side, upon which are represented the bust of a female and the head of a lion. Its present ruinous condition appears to be rather the work of man than the result of natural causes, each successive generation having pillaged the edifice for the sake of building materials.

On more than one occasion it has served as a place of defence, and nearly two centuries ago the tribes of the

---

\* The supposition seems to rest on very slender evidence. The well-known love of the elder Gordian for gladiatorial displays, and his munificence in this matter at Rome (Gibbon's *Decline and Fall*, vol. i. chap. vii.) may have originated the idea of attributing the Amphitheatre of Thysdrus to him. That he projected the work in order to show his gratitude to the city where he had been raised to the purple is within the range of probability. He was proclaimed emperor against his will at the advanced age of eighty, a time of life when honours fraught with danger are not usually sought. The dignity was accepted because his refusal would probably have cost him his life. As it was, he enjoyed the distinction for the short period of six weeks. We may assume, then, that the archæologists who have fathered the Thysdrus amphitheatre on the elder Gordian have done so without close investigation. Till further evidence be forthcoming, we must be content to leave the whole question unsolved.

† *Travels or Observations relating to Barbary*, chap. v.

district having taken refuge here after refusing payment of the annual tribute to the Bey, artillery was brought to bear against its massive walls, and a breach equal to one fourth of the perimeter prevented its ever being used again for a similar purpose. The town of Thysdrus was neither extensive nor opulent; and although history is almost silent on the subject of its rise and progress, yet we learn from the writings of Hirtius, a contemporary of Julius Cæsar, that, after the battle of Thapsus, the Emperor mitigated the fine imposed upon Thysdrus on account of the wretched condition of its inhabitants. There can be little doubt that the whole plain encircling the town was highly cultivated and covered with thriving farms during the Roman occupation.\* That the houses of Thysdrus have disappeared may be accounted for by their having been built of rammed earth and not of stone. There are no quarries in the immediate vicinity, the stone used in the construction of the amphitheatre having been transported from Salleta, the ancient Syllectum, about twenty miles distant. Nevertheless, from the fragments of marble and carved stone still to be met with, and from the treasures which have from time to time been discovered, we may assume that Thysdrus was once embellished with public buildings of a monumental character.† A thorough and system-

---

\* 'The Coliseum of Thysdrus calls to mind that of Vespasian, and equals in grandeur, with more elegance perhaps, the amphitheatre of Verona. Formerly a numerous and wealthy people filled it. What must have been the power of a municipality that could raise such colossal edifices on the borders of the Desert!'—V. DURUY, *Histoire des Romains*, v. 466, where will be found, as well as at vi. 319, views of the amphitheatre.

† Guérin mentions the finding of a statue, '*d'un goût très-pur*,' about the year 1847. At nearly the same time a box of gold coins was discovered, of which we were able to secure forty-one during our stay in Tunis.

atic exploration of the site would not fail to be attended with fair success. That Thysdrus was plentifully supplied with water is beyond doubt. Guérin discovered an inscription proving the fact. Further, the network of fissures, already mentioned, which cut up the surrounding plain, indicate the former existence of water-courses for the supply of the town and for irrigating the adjacent country. One word more: a word of admiration for a people who could, in a simple colonial town, at a vast distance from their own metropolis, conceive and execute so stupendous a monument! Lamentable, indeed, is the decline since their day — desolation, ruin, drought, sterility, where once reigned industry and abundance. It could hardly be expected that the Beys of Tunis or their immediate predecessors would respect the monuments of this once great colony of the Roman Empire. Their rule is now, happily, over. Let us hope that the French, whose *Société des Monuments Historiques* have done such good service in their own country, will extend a protecting hand to the monuments of North Africa, and prevent further spoliation of such noble remains as the Amphitheatre at El-Djem.

Instead of returning to Soussa, we had arranged to proceed to Mahedia and there join the steamer, which would touch at that port the same evening on its way south. Thus we should avoid passing the same route twice, save several miles, and gain time. We directed our coachman to take the road *viâ* Ksour-es-Sef, which would have enabled us to visit the ruins of Syllectum, and some Phœnician tombs to the south of Mahedia. But as we passed Aphrodisium on a former occasion without being able to reach it, so were we here doomed to miss Sallecta. Our driver was the dullest and most

stubborn of louts; and in spite of reiterated explanations impressed upon him by an Italian gentleman who happened to be at the caravansera, and who was good enough to serve as interpreter, he persisted in taking a somewhat shorter road straight across the plain. One of the horses, as we perceived after starting, had fallen lame, which was another inducement for him to shorten the distance as much as possible. This accident also diminished the speed, and consequently we took five hours to perform a journey which, with good horses, might easily have been done in half that time. The district through which we were about to pass—the southern extremity of Es-Sahel—is, if possible, even more monotonous and depressing than that which we had traversed on our way to El-Djem.

In a quarter of an hour we had left behind us the olive-groves on the east of El-Djem, and found ourselves once more upon an extensive plain covered with scrub, where there was some attempt at cultivation. Here and there an Arab, alone or aided by his wives and children, might be seen ploughing or sowing. With a donkey, or camel, or a cow, harnessed with cords to an implement resembling a crooked stick rather than a plough, he scratches up the soil between the scrub and tufts of weeds, and then scatters over it a few handfuls of seed. Any attempt to clear the ground or to uproot the tufts of rough herbage does not occur to him, and would possibly be regarded as unnecessary labour. Allah will provide! A profound sentiment, but at the same time the curse of the country.

By 2 o'clock we had quitted the plain, and rejoiced to find ourselves once more among the olive-groves. In this district the olives may be seen in great perfection; young trees had been planted to replace the unfruitful

ones, and evidence of capital and industry is abundant. The white buildings of Ksour-el-Sef, that we should have passed but for the stupidity of our driver, were gleaming in the sunshine some four miles distant; but access was impossible, as there is no cross-track. Passing some strips of barren sand that separate the coast towns here from the interior, we drove through the village and past the pleasant gardens of Zouida, laden with golden fruit. After watering the horses at a well sunk in the sand we entered the town of Mahedia at 3 p.m.

## CHAPTER XIII.

### MAHEDIA.

*November 13th.*

A HUNT FOR DINNER—'KUSS KUSSU'—DISPOSITION OF MAHEDIA—  
ORIGIN OF THE NAME—HOSPITALITY—TAKING SOUNDINGS—ON  
BOARD AGAIN.

HERE is no hotel at Mahedia, and no restaurant or other establishment where food can be procured. Our scanty supply of provisions having been consumed, the first thought after depositing our luggage at the office of the *Compagnie Transatlantique*, and settling with our coachman, was to obtain what the Americans would call a good square meal—some dinner. We hastened to pay our respects to the British Consular Agent, cherishing the hope of an invitation. The inhabitants of Mahedia dine at mid-day and sup in the evening. The steamer was due at 8 p.m., an hour when food on board would be difficult to obtain; besides, we were really too hungry to wait five hours. The Agent received us with great politeness, offering every assistance, but when we broached the subject of food, evidently a most unusual request, he seemed quite at a loss. After a little pressing he called one of his servants and gave him some instructions. What they were our ignorance of the language prevented us from comprehending, but we hoped that our friend was sending a message to his own cook. The emissary departed, and in about a

quarter of an hour returned with a Maltese, who, after some further conversation, thought he might be able to get us something cooked. He was, however, so dirty, and his aspect so forbidding, that, famished as we were, we had serious misgivings whether it would be possible to relish anything that his kitchen might produce. We thanked the kind Consular Agent and his Maltese acquaintance, and returned to the steamboat office. While our tickets were being prepared we again hinted, in as delicate a manner as possible, at our present needs. One of the Company's staff, M. Adolfo Lumbroso, was good enough to take compassion on us, and, conducting us to his home, appeased our hunger with an excellent *kuss kussu* (a national dish of which we shall have occasion again to speak later on), and extended his hospitality by an introduction to his family, in whose company we spent a pleasant hour.

The position and arrangement of Mahedia are peculiar. It occupies a small narrow peninsula jutting out directly into the sea, and consists of a single street, at one end of which, that adjoining the main land, stands the Kasba, while the other is terminated by a fortress overlooking the sea, formerly of importance but now dismantled. In spite of the twelve pages devoted to it by Guérin,\* Mahedia offers no resource and little attraction to the traveller. Of Arab origin, having been founded A.D. 912, or 300 of the Hégira, by Obeid-Allah, otherwise El-Mahdi, whence its name, it possesses no antiquities owing to its bombardment by order of the Emperor Charles V. Consequently almost all traces of its former strength have disappeared. If we except a fine mosque, a restoration evidently of the original

---

\* *Voyage*, i. 100.

edifice, the interior of which is supported by shafts and capitals from some Roman edifice, there is no building worthy of special notice. Mahedia, we were told, is exceedingly healthy; a fact easily accounted for by its exceptional position. We inspected in the house of M. N. Novak, the Austrian Consular Agent and manager here of the *Compagnie Transatlantique*, an interesting Roman inscription brought from El-Djem, which has been reproduced by V. Guérin.

We would here express our gratitude to M. N. Novak for much kindness and attention during our two short visits to Mahedia. With some regret we bid adieu to the pleasant family of M. Lumbroso and, gladly accepting seats in the Company's boat in correspondence with the steamers, were soon skimming the waters with our good friend M. Novak. The roadstead of Mahedia is so shallow and uncertain that steamers arriving in the night are not able to approach the land within a couple of miles, even in fine weather, until soundings are taken. This is done by a rowing-boat, which puts off some time before the steamer is due. A safe anchorage found and the vessel sighted, Roman candles are ignited in the boat in order to indicate her whereabouts. For more than an hour we were tossing about on the water before the *Ville de Bône* was declared to be in sight. The night was dark but tranquil, and the sea being fairly calm, the time passed quickly away in pleasant company. At length we perceived a huge black mass in the offing, which gradually approached us, and in ten minutes we were on the deck of the *Ville de Bône*.

## CHAPTER XIV.

SFAX.

*November 14th.*

A TOWN BUILT ON THE SAND—THE SPONGE MARKET—COMMERCIAL  
ACTIVITY—AN ARAB HOUSE—HADCHIS—JEWISH WOMEN.

**A**T midnight the *Ville de Bône* got under way, and at 11 o'clock on the following morning, November 14th, anchored off Sfax, within sight of the low shores of the Kerkenah Islands, where refractory prostitutes and women guilty of adultery are banished. The roadstead before Sfax is so shallow that the steamer could not anchor within at least two miles of the shore; but a pleasant breeze enabled us to reach the land in about twenty minutes in one of the little boats lying in waiting. To rejoin the steamer at sundown when the wind had fallen took considerably more than an hour.

It has been suggested that Sfax occupies the site of ancient Taphrura, but this seems doubtful. The modern town is literally built upon the sand, a wide belt of sand separating it from luxuriant gardens on the land side. The Romans were not likely to have chosen such a site for a town of any importance, although vestiges of Roman constructions may be traced without the present walls. Only recently some excavations near the shore, in connexion with an extension of the quay, brought to light a circular niche lined and paved with mosaic,

---

forming part of a large edifice, most probably a bathing establishment. The character of the work indicates a late period of the Empire. Situated as it is, Sfax has but a poor appearance from the sea, in spite of its Kasba and white crenelated walls flanked with bastions. In commercial activity it scarcely yields to Soussa. Esparto grass\* (better known by its Arab name of Halfa), dates and grain, are exported largely. The land in the vicinity of Sfax is very productive, yielding two crops yearly. The olive is exceedingly fruitful, and trees of two years' growth bear fruit. The date-palm flourishes, although the fruit is not of the best. The chief source of wealth, however, is the sponge fishery; the shallow bay of Sfax, as well as the coasts of the Kerkenah Islands, yielding this zoophyte in large quantities, although not perhaps of the finest quality. In the office of Mr. Galea, our Consular Agent, whose acquaintance we had the good fortune to make here, we saw a sponge well shaped and of the following dimensions: 1 foot 10 inches by 1 foot 8 inches by 1 foot 6 inches—possibly the largest sponge known. The sponge market is on the quay, or rather on the shore, for a quay can scarcely be said to exist in close proximity to the landing-place. It is a scene of great activity. The sponges are exposed for sale in circular groups on the open ground.

Sfax is entered by two gates only. Before reaching

---

\* 'The trade in esparto grass ought to be the most important on the coast, but it is being rapidly annihilated; owing to the unwise restrictions placed upon it by the Tunisian Government. This valuable fibre is found in Algeria, Tunis, and Tripoli. It was first brought into use by Mr. Lloyd, owner of the *Daily Chronicle*, who had an establishment at Oran, and up to the present time the trade has remained almost entirely in the hands of the English.'—PLAYFAIR'S *Consular Report on Tunis*, Commercial. No. 3 (1886), Part I., p. 33.

that facing the sea one has to traverse the European quarter, peopled chiefly by Maltese and Jews. It is as busy as it is dirty. Hundreds of camels and asses may be seen grouped without the walls, and merchandise of all kinds, as well as bales of esparto grass, encumber the open spaces. Within the gate one finds oneself involved in the usual narrow, tortuous, ill-kept streets, with a mosque enriched with Roman shafts. The souks are well furnished, and quite as characteristic as those of Soussa. Were a proof needed of the prosperity of Sfax, we might point to the handsome private houses, the stone doorways of which are frequently embellished with intricate and varied designs, delicately carved. While admiring one of the doorways belonging to a house in the Rue de la Poste, now occupied by the French as their *Trésor*, an officer politely invited us to inspect the arrangements of the interior. It is a fairly representative Arab house. From the street one enters through a vestibule into a patio, or open courtyard, furnished with a well. Several apartments open into the patio, in each of which is fitted a richly painted wooden screen, with a Moorish arched opening in the centre. Behind this screen the bed, or sleeping couch, was placed. The ceilings are of wood painted like the screens. A steep and very narrow stone staircase leads to the first floor, consisting of several small rooms destined for the occupation of the women. The windows are small and grated, and an open balcony, overlooking the patio, on to which the upper chambers open, is furnished with a kind of wide projecting ledge, effectually preventing those in the courtyard from seeing any one passing along the balcony. Immediately above the well there is an opening, through which the women were able to draw water without going down to the lower floor.

A DOORWAY IN SFAX.

The men of Sfax appeared more active and busy than in other towns of the Regency, and the life of the people seemed more energetic.\* One meets the usual number of blind and one-eyed; but that which will not fail to strike the traveller is the unusual number of green turbans met with at every turn. Nor are these descendants of the Prophet confined to the wealthy class; the humblest servant, if he can prove his lineage, has an equal right with a Cadi to encircle his brows with Mohammed's favourite colour, and to call himself Hadchi.

As we turned the corner of one of the narrow streets on our way to the shore to regain the steamer, we found ourselves suddenly among a bevy of young Jewish women, of whom two were of superlative beauty. They were twelve or fourteen in all, and were returning from the bath, where they had accompanied the maiden who walked at their head, and who was to be married on the morrow. The bride was more richly attired than her companions, and wore gaiters embroidered with gold, and a profusion of jewelry. She was stout, under twenty years of age, and very comely.

---

\* 'The people of Sfakès, or Sfâksika, are distinguishable from their co-religionists of Tunisia. One recognises them by a certain difference of costume, for they do not like to be mistaken for other Tunisians. It is in their force of character, above all, that they differ from other citizens: they have more initiative, more industry, more ingenuity; in everything they are more active and more earnest than their neighbours. They are said to be zealous Mussulmans: the children even frequent the mosques, and the women do not neglect their prayers.'—*Nouvelle Géographie Universelle*, Reclus, xi. 216.

## CHAPTER XV.

### GABÈS.

*November 15th and 16th.*

A TOWN OF SHANTIES—NATIVE VILLAGES—RAS-EL-WAD—THE OASIS—  
DATE GATHERING—DÓGS—TENT DWELLERS—OUED GABÈS—DRESS  
OF THE JEWESSES—CHARACTERISTIC SCENERY—A DIP IN THE SEA.

**W**E dropped anchor off Gabès at 5 o'clock in the morning of November 15th, and were on shore by half-past seven.

We had intended to continue our voyage as far as Djerba, a distance of 60 kilos; but on learning that the *Ville de Bône* would reach that island in the evening and leave early next morning, that it took two hours to land and at least an hour to embark, we resolved to remain at Gabès until the steamer should return and carry us north again.

In the numerous shanties which compose the port of Gabès—one of them designated as Grand Hôtel!!—there is no sleeping accommodation for European travellers, so we gladly accepted the hospitality of our Vice-Consul, Mr. Galea.

A very few words will suffice for Gabès, which is not a city, nor even a town, but one of those heterogeneous places where civilisation is in its infancy, or rather where a new civilisation is being engrafted upon an old one. Whether Gabès occupies the actual site of the Roman Tacape is a matter of doubt. The stretch of

OUTSIDE THE WALLS OF GABÈS

sand on which the modern port is built did not probably exist at that period, having been formed by the action of the tide during many centuries. Gabès is called after a river of that name, which here flows into the sea ; and the port consists of the Club-house of the French officers, a respectable stone building, and some hundred wooden huts, such as one sees in the far west of the United States. They are used as go-downs, general stores, cafés, barbers' shops, and other similar establishments of a most primitive description, and are kept by French and Maltese. Here, too, are the compounds and factories where the esparto grass, the chief product of the district, is received, packed, and shipped ; and strings of camels and asses, laden with this valuable commodity, may be seen at early morning slowly wending their way towards the merchants' quarter.

The town of Gabès has been made familiar to us of late years by a daring proposal of the late Commandant Roudaire to create an inland sea by the submersion of a large tract of the Sahara, some hundreds of miles in length, taking advantage of an immense natural depression which stretches from near Gabès westward. A glance at any map of North Africa, in which the great Chotts in this district are clearly defined, will enable any one to form a fair idea of the proposed scheme. The whole subject, however, from a geographer's point of view, has been so exhaustively treated by the late M. Charles Tissot in his *Géographie comparée de la Province Romaine d'Afrique*, that we must refer the reader to this work for much valuable information on the subject. As a matter of public interest, an experimental Artesian well has been recently sunk at a point on the coast, 18 kilomètres north of Gabès, with very satisfactory results. A column of water is thrown up sufficient to

irrigate 60,000 palm-trees ; and there is reason to believe that, by the sinking of further Artesian wells, the supply will be so abundant that an enormous tract of country, now dried up and desolate, will be converted into a garden of plenty. To use the words of Consul-General Sir R. L. Playfair, 'This seems to me the true solution of the problem of an inland sea.'

About a mile and a half inland, and separated from the port by a sandy waste, are the native villages of Menzel, Djard, and Chenneni. Their interest for the traveller consists in their truly Arab character, unaffected as yet by European civilisation, rather than in the remains of any monuments of antiquity. Both streets and houses are very curious—the former narrow, tortuous, and often covered entirely over with beams of palm, rendering them almost obscure ; the latter very low, never rising above one story, and with doors and rafters of roughly-hewn palm wood. Numerous koubbas are seen in all directions. The most important of this group of villages is Menzel, which boasts of the residence of the Kaid, as well as a large open market-place surrounded by shops, where extensive business is transacted in European manufactures as well as in native produce. Around these villages, and particularly between them and Gabès, the plain is dotted by numerous gorbies, or Arab encampments.

It seems probable that the ground upon which the modern port now stands was formerly covered by the sea, and that it has in course of time been raised by the soil brought down by the river, and partly, as before observed, by the constant action of the tide, which at this part of the Mediterranean rises to the height of about seven feet.

When the French first occupied the district, General

Logerot fixed his camp at Ras-el-Wad, meaning 'Head of the River,' some six miles inland, where it still remains. This inhospitable spot, a veritable desert, without any kind of shelter, is accessible by a road formed with much difficulty and expense across a sandy plain, broken up in all directions by hillocks and deep ravines. Even at this cool season of the year we were almost stifled by the heat and blinded with dust, which rose in such clouds that the view was at times entirely obscured. A more ill-chosen station it is difficult to conceive.

The real charm of Gabès, however, is in its gardens, covering an area of some forty-eight square kilomètres, and extending along the winding banks of the river, whose waters irrigate and fertilize in a marvellous degree this strikingly beautiful oasis. Under the shade of lofty and graceful date-palms entwined by clinging vines, one wanders among orange, citron, almond, fig, and pomegranate trees, or madder and hennah bushes, springing out of a soil producing cereals and vegetables of every kind, and in boundless profusion. The whole oasis is divided into gardens by hedges of impenetrable cactus, or by small artificial water-ways, over which one has frequently to leap in order to pass from one garden to another. The date season being now at its height, we watched with interest the men climbing the palms and cutting down the golden clusters, while women and children below gathered the fruit as it fell, and spread it on mats to dry in the sun. Others filled the panniers of the attendant camels, who were allowed to enjoy a share of the abundant crop. The dexterity with which the Arabs ascend the spiral, branchless trees is marvellous. This feat they perform by means of a rope encircling the trunk and their own body. The rope is of sufficient length to enable them to plant their feet on the rough

bark, and by shifting the rope with their hands, while their feet firmly grasp the tree, they literally walk up the perpendicular stem with astonishing ease and certainty. As we were watching their proceedings, they bade us partake of the dates at our pleasure—an offer of which we gladly availed ourselves.

One great inconvenience of moving among the villagers or tent-occupiers throughout Tunisia is the constant attacks of the dogs, which rush out in numbers from every hovel or gourbi, barking and snarling in the most savage manner. Whether the bark is ever followed by the bite we had happily no occasion of judging; but our good friend Mr. Galea prudently sent with us on this occasion an Arab boy armed with a stout stick in order to protect us from too formidable attacks.

The tent-dwelling Arabs, numerous around Gabès, lead poor lives. The men labour in the fields or in their own gardens, when they are prosperous enough to possess or rent one; the women cook, spin wool and camels' hair, and weave the cloth of which their tents are made; the children tend the animals and poultry, sweep out the tent, and assist in cooking. We saw two little girls skinning a sheep's head and feet and roasting them on wood embers ignited in the open field, while other children were cutting up the intestines of the animal and hanging them on lines to dry in the sun, preparatory to future degustation. These nomads have dark skins, and are not unfrequently quite black; the children are dirty in the extreme, and their entire clothing consists of a piece of cotton, generally in rags, but thrown round them with a grace to which an European child is an entire stranger; the women, scarcely less dirty than their offspring, wear their hair in matted locks, like the curls on an ill-kept poodle dog, do not cover their faces, and are

not shy, but, on the contrary, seem pleased at being noticed.

One of the most pleasing sights here is to watch the Jewish women and girls fetching water in the early morning, or at sunset, from the Oued Gabès, or washing themselves or their garments in the running stream. They dress quite differently from Jewesses in other parts of Tunisia, and do not wear, or at any rate do not display, the tightly-fitting trousers, but envelop themselves in loosely-flowing robes, or more generally in a simple length of cotton stuff, which they fold gracefully around them. They delight in gay colours, chiefly orange and red, which harmonise agreeably with their slightly bronzed complexions. They wear a profusion of silver trinkets—chains, bracelets, anklets, &c., which they do not put off even while washing. The attire of the Arab women is more sober in colour, being almost invariably dark blue. The men dress generally in white.

The scenery of Gabès is purely African—the sandy desert, surrounding an oasis out of which sylph-like palms rear their lofty crests, the numerous koubbas which here serve as landmarks, the countless goubies dotting the arid plain in all directions, the strings of camels in constant motion, laden with the produce of the interior—all combine to form a picture unmistakably Oriental.

The weather was so beautiful during our sojourn at Gabès that we were tempted, in spite of the sharks and dog-fish which occasionally approach the coast, to take a plunge in the sea. The Arab lad who accompanied us shuddered as he saw us leap into the water from the end of the wooden jetty. At first we thought his concern for our safety was the cause of his sudden change of countenance, but it was in reality nothing more than the

shock occasioned to his feelings by our immersing ourselves in cold water at this time of the year.

'That boy,' we said afterwards to Mr. Galea, 'no doubt thinks us mad for bathing in the sea in the month of November.'

'Of course he does,' was our friend's laconic reply.

## CHAPTER XVI.

### GABÈS TO SOUSSA BY SEA.

*November 17th and 18th.*

DEPARTURE FROM GABÈS—DECLINE OF BRITISH INFLUENCE—STREET NAMING — RETURN TO SFAX — SERVANT ENGAGED — MAHEDIA — PHŒNICIAN TOMBS—MONASTIR—SOUSSA.

**T**HANKS to the kindness of Mr. Galea, we had spent two most agreeable days in this beautiful oasis of Gabès, and had obtained much interesting information on many subjects connected with the commerce of the country and the prospects of an extension of trade under the present occupiers of the Regency.

Every Englishman must be struck with dismay at the decline of British influence in a country where, not many years ago, we were respected and our counsels were followed. In spite of what may be said to the contrary by those who may be prompted possibly by jealousy, it cannot be denied that British influence is salutary. The most superficial observation of those parts of the world where the English dominate will suffice to demonstrate this. Although the natives of North Africa are pleased when they learn that the traveller is an Englishman, they have little or no faith in our ability to serve them, or of our weight in the councils of nations. Englishmen are

nowhere to be met with ; very few English commercial houses have factories or branches in the country ; there is no market for British manufactures ; and even the esparto grass, which is shipped almost exclusively to Great Britain, is hampered with a vexatious export duty. Consular reports give ample evidence on this subject.

As in France, so in Tunisia, the French continue their mania for rechristening streets. Here they change the Arab names for those of the officers who may have been engaged in capturing the towns in question, so that the native may be reminded at every turn in his path of the nation he loves the least. Here we see Boulevard Boulanger, there Rue Général this or Colonel that.

At one o'clock in the morning the steamer left for Sfax, reaching that port in five hours. Hitherto we had managed fairly well without an interpreter ; but as we now contemplated a journey right across Tunisia, we were prudently advised to take one. Such an individual we obtained at Sfax, through the kind assistance of Mr. Gatte. François, so he called himself, our future interpreter, cook, and servant-of-all-work, was a Maltese, who spoke no English, and only a very little bad French. He might have been taken for a bandit, a sea-captain, a horse-keeper ; for anything, in fact, but what he really was—a cook. He wore a small felt hat, a loosely-fitting coloured shirt without any necktie, a looser jacket, no vest, and trousers, over which he drew a pair of high jack-boots. His appearance was altogether free and easy, and he looked as if he could turn his hand to anything. His capabilities were, however, as experience subsequently proved, very limited.

The arrangements necessary for the engagement of François, and another ramble through the streets of Sfax, occupied our time until 6 p.m., when we steamed off

again, anchoring the following morning before Mahedia. The sea had been perfectly calm during the night, and the loveliness of the weather remained unchanged.

Before taking leave of M. Novak on the previous occasion, he requested us, should we desire to make an excursion to some Phœnician tombs recently discovered in the vicinity of Mahedia, and the weather permit our landing, to telegraph to him before leaving Sfax. Of this we gratefully availed ourselves, and on landing found at our disposal a private carriage, well equipped with three stout mules. Nor was this all, for a friend of M. Novak was good enough to accompany us, in order to insure our seeing all that could be seen during the short time the steamer lay at anchor. Not an instant was lost; the coachman gave the word of departure to his sturdy animals, who started off at a good round pace and, following closely the sea-shore, we found ourselves in less than an hour at our destination.

The tombs lie within half a mile of the sea, about four miles south of Mahedia, and as nearly as possible equidistant between that town and Salletta. They are cut in a spur of the rock, from which was quarried the stone of which the Thysdrus amphitheatre was built, and which here rises about twelve or fourteen feet above the general level of the shore. About a dozen tombs, out of many hundreds which no doubt may be found here, were explored a few years ago by M. Melon, and have been fully described in a paper entitled *La Nécropole Phénicienne*, and published in the *Revue Archéologique*, 1884. This necropolis, which extends along the shore for about three or four miles, has been ransacked by Arabs at different periods, and consequently few objects of interest or of value were met with during the recent exploration. The tombs are very similar in

plan and arrangement, but with varying dimensions, and the entrances are all on the east side. A sharp descent by a flight of steps cut on the left or south side of a square trench conducts to a stone door, averaging three feet square, forming the entrance to the sepulchral chamber, the floor of which is some two or three steps lower down. On either side is a bed of stone, on which the bodies were placed, and at the end is a small niche for a funereal lamp. The walls of these chambers are not quite vertical, but incline inwards towards the top. The late M. Renan, to whom M. Melon's drawings of these tombs were submitted, was of opinion that they belonged to a class of sepulchres rarely met with, the formation being different from those discovered at Tyre, as well as other Phœnician settlements on the coast of Africa.

After an examination of as many tombs as our limited time would permit, we hastened back to the steamer, and at a quarter-past one p.m. were off Monastir. Some fifty casks of oil were here waiting for shipment, so that we had ample leisure to enjoy the lovely panorama along this part of the coast. Little of the town of Monastir is visible from the sea; but the coast, clothed with olives apparently down to the water's edge, presents a striking appearance. On rounding the cape, with its islands and forts, Monastir becomes more prominent, and presents an enchanting picture with its white crenelated walls, its towering Kasba, and its numerous white koubbas, encircled by olives and palms, the peak of Zaghouan rising boldly in the distance. Crossing the bay, we anchored off Soussa at 8 p.m.

## CHAPTER XVII.

### SOUSSA TO KAIROUAN.

*November 19th.*

AN UNINTERESTING ROAD — MOUREDDINE — MEN WASHING — ROMAN CISTERNS—A FRENCH TRAMWAY—FIELD FIRES—LAKES KELBIA AND SIDI-EL-HANI—WELLS—HILLOCKS—AIN-KAZEZIN—FIRST SIGHT OF KAIROUAN BY MOONLIGHT —FONDOUKS—OUR INN—JEWISH MUSIC AND DANCING—FANATICISM CHECKED.

**T**HERE was no inducement to remain in Soussa longer than the time needed to complete our arrangements, and to procure provisions for our journey into the interior. These matters of detail were concluded on the morning of November 19th, and at midday we took our departure.

Although Captain H elouis had kindly offered to convey us to Kairouan by the tramway which has been just laid by the French between the two towns for military purposes, we preferred to hire at Soussa a carriage in which we could continue our journey beyond Kairouan, and that might be available as a sleeping-place in case of emergency. It was the usual rough kind of landau, drawn by four small horses and driven by a man of colour, exceptionally energetic and obliging.

If one sets aside the absolutely African aspect of the scenery, a few ruined Roman reservoirs, and such glimpses of Arab life as can be caught by the way, the

route from Soussa to Kairouan is devoid of either interest or beauty. The entire distance is 52 kilomètres. After passing the olive-groves which surround Soussa, and the villages of Messaadine and Moureddine, the road traverses vast plains, flat or slightly undulating, waterless, treeless, and almost devoid of cultivation.

Immediately after quitting Soussa by the Bab-el-Gharbi we passed between the Arab and European cemeteries, and for three hours jolted over a track, winding among the olive plantations, and broken up by the ridges and grips cut across it to secure the rainfall.

At two o'clock we passed through Moureddine, already mentioned, where olive-pressing is an important and successful industry, scarcely to be credited to so filthy and, as far as appearances go, so miserable a place. Here we observed men at a tank washing—an operation which they performed by stamping on the garments and pressing out the impurities with their feet. Shortly after leaving Moureddine the olives cease altogether, and the plains become entirely desolate and shelterless.

At three o'clock we alighted to examine a disused and partially ruined Roman cistern, of no great importance, which we perceived immediately to the left of the road.

The Decauville road, as the military tramway is called, and the carriage track do not follow parallel lines, but intersect each other at an acute angle about half way; the former we struck at a quarter to four o'clock, when we crossed and recrossed it several times. At this spot numerous fires, kindled by the labourers who were clearing away the weeds and scrub previous to ploughing, lit up the plain for a great distance all around, and imparted a weird aspect to the desolate and melancholy scene.

The two lakes of Kelbia and Sidi-el-Hani, which we

had skirted on our way to El-Djem, were visible on either hand at four o'clock, although at some distance from the route.

Another Roman cistern to the left of the road attracted our attention at a quarter-past four o'clock, and in another quarter of an hour we observed several koubbas in the same direction.

At a quarter to five o'clock we entered a flat grassy tract of land, forming a slight depression in the plain and pierced by numerous wells. Here groups of Arabs were drawing water in rude pitchers, and camels and asses, cows and horses in great numbers, were eagerly slaking their thirst. The scene was gay and animated, recalling some one or other of those old-world narratives familiar to us in chapters of Bible history. The Oued Zeroud, which rises in the Djebel Touila and loses itself in the marshy tract to the south of Kairouan, is probably the source of supply to these wells. The plain is here dotted for several miles around by small hillocks, thorns and stunted shrubs springing out of them. These are the sites of former encampments, each little mound marking the spot covered by a tent or gourbi, the refuse and ordure left by the occupiers having imparted fertility to the spots. Such a district, where water is abundant, would naturally be a favourite halting-place for caravans and pilgrims passing to and from the holy city.

Another hour brought us to a small lake hemmed in by very marshy ground, where the road was so bad that we had to leave the carriage and proceed some distance on foot. We had intended to enter Kairouan by daylight, but the sun was sinking below the horizon and the city walls were not yet in sight. Our coachman, who had declined to stop at the wells already noticed, where the Arabs were watering their cattle, now pulled

up at Ain-Kazezin, and while resting and refreshing his horses we again walked on.

It was now seven o'clock. The city was in view some four miles distant, and the moon so bright that the minarets and whitened walls stood out as sharp and clear as in broad daylight, while the shadows were distinctly marked in soft outlines. We had some little difficulty in crossing the Oued Bagla, where a bridge was in course of construction, and at half-past seven o'clock we halted before the door of the inn, immediately without the walls of Kairouan.

The native fondouks are of necessity important establishments in a town where not a day passes without the arrival or departure of a caravan, either religious or commercial; but since the French occupation they are not frequented by Europeans, although all restrictions concerning unbelievers have been abolished. The miserable barrack where we were to be lodged, kept by an Italian, and notable for its uncleanness, detestable cooking, and lack of decent furniture, is at present the only inn for Europeans.

After hastily despatching a meal, the remnants of the dinner prepared for some French sub-officers whom we found at table when we entered, we sallied forth into the city, and sauntering through some of the principal streets, now almost deserted, entered an establishment to which we were attracted by a lamp over the door, and by strains of music from within. It was a low-pitched, white-washed room, without any attempt at decoration, and furnished with a few rough tables and benches, at which some twenty Arabs were sitting. The performers consisted of three men and two women, Algerian Jews, seated cross-legged on a low platform at one end of the apartment. Before them were placed several candles,

stuck into empty bottles, by way of foot-lights. Their music was, as usual, of a plaintive character. Then one of the women—robust, middle-aged, and uncomely—slipped down from the platform and began to dance among the audience. Her movements were simple and unvaried, even to monotony; not altogether devoid of grace, they were marked with that tincture of sensuality peculiar to all Oriental dancing, or rather posturing. Putting the corners of two handkerchiefs in her mouth, so that the ends hung down behind the shoulders, and extending her arms, she jumped up and down, or moved backwards or forwards, and then, suddenly advancing towards one of the audience whom she had singled out as the probable possessor of a few pieces of money, she took up her position close to him, gazed at him steadily and amorously, and wriggled her body in a lascivious manner. Nor did she desist until the object of her attack had rewarded her pertinacity with a coin, however small. The transfer was effected by the donor wetting the piece with his spittle and sticking it on her forehead.

We had, of course, not escaped the stout Jewess's importunities, and our contribution had evidently given satisfaction, for the musicians, taking us, as usual, for Frenchmen, now struck up in our honour the Marseillaise, which we stopped at once, as on a previous occasion.

Having already witnessed this kind of performance in Algeria, we were not a little surprised at finding the inhabitants of Kairouan, hitherto held to be such uncompromising and exclusive fanatics, tolerating and even finding pleasure in the performances of the universally detested Jews. It is a proof, were one needed, how thoroughly the French have shattered the prejudices of the natives; or rather, how completely they have stifled them, at any rate for a time.

## CHAPTER XVIII.

### KAIROUAN.

*November 19th, 20th, and 21st.*

BAD WEATHER—DECLINE OF RELIGIOUS ENTHUSIASM—THE KASBA—  
THE GREAT CISTERNS—THE CITY WALLS—ITS ORIGIN—THE SOUKS  
—DJAMĀA-EL-KEBIR—THE SACRED WELL—MOSQUE OF THE THREE  
GATES—MOSQUE-TOMBS—THE SUBURBS—TOMB OF THE COMPANION—  
EDUCATION—ASPECT OF THE COUNTRY—POPULATION DEGENERATING  
—COURTESY OF THE INHABITANTS—A THUNDER-STORM.

**B**AIR weather is of paramount importance to the traveller in Tunisia. An African town loses all its charms under a leaden sky and a downpour of rain. The spell is broken. The glistening walls and wondrous effects of light and shade are exchanged for one dreary monotony of whitewash; and streets and alleys, innocent of paving, become one long series of muddy pools. Such was the aspect of Kairouan\* on the evening of the first day after our arrival, dulling the long-awakened curiosity to tread the ground of a once forbidden city, and to penetrate every nook and corner of its holy places.†

Our first care was to deliver a letter of introduction

---

\* The name is variously written by different European authors, as Cairwan, Kairwân, Kerouan, Kerwan, Qairouân, Qirwan, &c. We have followed the spelling adopted by the French in their most recent official publications.

† An Arab proverb says that seven journeys to Kairouan are equivalent to one pilgrimage to Mecca.

---

to Captain Cret, the French commandant, and to procure an official order to enter the various mosques of the city. Without this permit they would have been closed to us,\* like those of all other towns in Tunisia. It certainly seems anomalous that Kairouan, the hot-bed of Arab fanaticism, should be the one place in the Regency where the mosques are not forbidden to unbelievers. But this may be easily accounted for. Kairouan the holy has long ceased to exercise paramount influence over devout followers of the Prophet; and the spirit that once animated the enthusiastic disciples of the new creed, and led them on from victory to victory, till they were stopped at last at the walls of Tours, has little in common with the sentimental fanaticism and hopeless degeneracy of an effete race. So that when the first French soldiers arrived the other day under the walls of the city, the gates were thrown open without a murmur or a struggle; and the sanctity of the city, and of all that had been closed against the infidel, whether Christian or Jew, for twelve hundred years, with its precious mementoes of hundreds of saintly men, vanished, never to be revived.

While the document was being prepared by the interpreter of the regiment (it was written in Arabic), the captain was good enough to conduct us to the Kasba, placing an orderly at our disposal during our stay in the city. As Kairouan is built on level ground, the Kasba does not dominate the city, as elsewhere, but consists merely

---

\* Freiherr von Maltzan, who visited Kairouan in 1869, was not permitted, any more than other infidels at that period, to enter the mosques. He recounts with some humour how the Arab official, arriving early in the morning to conduct him through the city, surprised him in his dressing-gown, and persisted in his retaining throughout the day that garment, as being, in his opinion, more dignified and less offensive to the inhabitants.

of a vast courtyard with a range of reservoirs underneath, and is surrounded by one-storied buildings now tenanted by French soldiery. It occupies an angle in the crenelated wall that encloses the city, and has an external gate communicating with the open country, without any bastions or outworks. Passing through the gateway we arrived, after five minutes' walk, at the remarkable double reservoir, said to have been constructed by a prince of the Aghlabite dynasty about the end of the eighth century. It has been restored at different periods, and although disused, is in sufficiently good preservation for the storage of fifteen million gallons of water. The reservoir consists of two large polygonal basins, 20 feet deep, the smaller one being 112 feet in diameter, and the larger one 414 feet. In addition there are two vaulted filters communicating with the large cistern, and the remains of covered galleries over them, for the purpose of keeping the water cool, as well as of sheltering from the sun the inhabitants and pilgrims who came here to draw it. The arrangement of these cisterns, as well as their construction, differs so much from those generally assigned to the period of the Arab occupation of North Africa, commonly called *feskias*, which are invariably of a square form and of rude construction, that one is tempted to discredit the statement of El-Bekri, an Arab writer of the eleventh century, attributing them to the Aghlabites. There is no other authority for the statement which has been handed down, uncontradicted and unverified, through eight centuries. There are many features in these cisterns in their present condition that point to an early period of the Roman occupation, probably the second or third century; and as they are of the same form as many others in the country that are undoubtedly Punic, it is reasonable to suppose they owe

their origin to some Carthaginian settlement prior to the commencement of the Christian era. The remains of an octagonal tower in the centre of the larger basin, that in El-Bekri's time was crowned by a pavilion with four doors, leads one to conjecture that it was surmounted by the statue of a Roman Emperor, who had rebuilt or restored this public work. Again, the inside of the smaller basin is embellished with a series of eighteen circular-headed niches, evidently intended for statues of nymphs or water-gods; but of these it must be admitted there are no indications. The buttresses also of the walls of both basins are of a form peculiar to Punic times, and were adopted by the Romans in numerous reservoirs, of which there are many remains in other parts of the Regency.

Without entering further into the question, one may assume that some Aghlabite princes, desirous of promoting the welfare of the inhabitants of Kairouan, restored these cisterns, and probably built several of the other reservoirs outside the walls, mentioned by El-Bekri, of which there are the remains of four, long since neglected and disused. Any one, travelling over the great plain that isolates Kairouan from any other settlements, will see at a glance that the storage of water in a country where there is frequently no rainfall for more than twelve months was not neglected by its earlier rulers, and that the extraordinary fertility of the soil, recognised by most writers, was due in a large measure to the construction of reservoirs and a proper system of irrigation. Perhaps the existence of this abundant water storage may have influenced Okbah in his selection of this site for his capital, and that the town may have been, so to say, built up to the reservoir. There are no springs in the neighbourhood, and there

is only one well outside the walls ; every mosque, every house, has its tank in which to store the rainfall, so that a work of this kind and magnitude was of the greatest importance, not to say necessity.

The general aspect of Kairouan is that of a military rather than of a sacred city, bearing some resemblance to Peking, though on a much smaller scale. It is enclosed by a crenelated wall, having seven irregular sides, about 30 feet high, and varying from 6 to 8 feet in thickness, built entirely with small, well-burnt bricks, 2 inches thick, made from earth in the immediate suburbs. It is strengthened by square and round towers at intervals, of the same height as the wall, and although formidable enough in appearance, would be entirely useless at the present day as a place of defence. Inside the wall is a terraced walk all round, from 4 to 5 feet wide, just below the crenelations, and the foot of the wall is kept clear of buildings, so that there is free circulation all round on both sides. There are five principal gates of a somewhat similar form, and three posterns called *khaukhat*, which are nothing more than low winding passages, 5 feet high, and not wide enough to admit any but the thinnest of mortals. These are not closed either by day or night, and there are no indications of either doors or shutters ever having been attached. The Bab-el-Tunis, or Tunis gate, like the others, has an arch within an arch, the outer one resting on marble shafts, and the inner one having voussoirs of black and white marble. The spandrils are framed in marble, and two framed marble slabs covered with inscriptions adorn the filling-in between the two arches. These have the appearance of being modern, replacing others similarly inscribed. The writing on these gateways is in praise of the structure. 'Hasten to behold

BAB EL-TUNIS. KAIROUAN

it,' says the inscription on the Tanners' Gate ; ' Beauty has placed its mark on the Gate of the Tanners.'

The history of Kairouan, from its foundation by Okbah in the year 667 through its four centuries of wondrous prosperity, followed by a long period of corruption, and finally by inevitable decay, has been so well traced by Mr. Broadley in his *Tunis Past and Present*, that it would be superfluous to enlarge on the subject here. It is sufficient to state that the Arab historian Novairi, from whom later authors have mostly derived their information, tells us that in 55 A.H., or 675 of our era, Okbah selected the site for his city, the whole country being at that time an impenetrable forest, so infested with venomous serpents and wild beasts that his followers murmured at his choice. Upon which the religious commander, after addressing himself to Allah, ordered these enemies of the human race to retire. When he had ceased speaking, continues Novairi, the Mussulmans saw with astonishment during the whole of the day the venomous beasts and wild animals retire in the distance, taking their young with them—a miracle which converted a great number of Berbers to Islamism. Then Okbah, planting his lance in the ground, exclaimed, ' Here is your Kairouan '—caravan or resting-place.

As no stone for building purposes is to be obtained within a reasonable distance, brick is the material most frequently used : a manufacture still carried on in the immediate outskirts of the city. The dwelling-houses are low, generally of one-storey, mean, and unimposing, each being provided with an underground water-tank. It need scarcely be said that these are mostly choked with dirt and the impurities of many centuries. Even the sacred edifices, the glory of Kairouan, are not attractive when seen from the streets, although the cupolas are more

ornamental than those generally found in Tunisian towns. They are invariably fluted, or ribbed like a melon, and have been described as consisting of a series of 'vertical ribs converging towards the top, so that they are not unlike the knob of a keyless watch.' In common with other towns in North Africa, Roman shafts and fragments of Roman ornamentation are to be seen at the corners of streets, forming the quoin or prop of some ill-constructed Arab wall. The four principal streets are wide and fairly-well paved, but the by-streets and alleys are filthy and tortuous, and as ill-kept as in other Arab towns. The bazaars are similar to those of Tunis, and scarcely less animated, but the wares exposed for sale are neither so rich nor so varied, and the costumes of the inhabitants, almost entirely Arab, are less pleasing to the eye than the more ornate garments of the Moor or Jew. The industries are confined principally to the working of leather, the trade in horse-trappings being considerable. Slippers made at Kairouan are also much esteemed, their bright canary-coloured dye being as celebrated here as it was at Cordova in the days of its prosperity. Carpets also are made here, but the trade is not very considerable. The interest in Kairouan may be said to be centred in its mosques and *zaouias*. You may count fifty of the latter, and at least twenty mosques, but there are only six deserving special notice.

The great mosque, known as Djamäa-el-Kebir, occupying the north-east angle of the city, close to the ramparts, was built, as tradition informs us, by Sidi-Okbah, the companion of Mahomet and the founder of Arab rule in North Africa.\* This was the man who, at

---

\* In *La Civilisation des Arabes*, by Dr. Gustave Le Bon, will be found views of the mosques of Sidi-Okbah and of Sidi-Amar-Abada, as well as of the mihrab of the mosque of Sidi-el-Habib.

A STREET IN KAIROUAN

the head of a band of warriors, as fierce and daring as himself, passed like a whirlwind over the land, and when he arrived at the borders of the Atlantic upbraided his Creator for having stopped any further conquests. Of the original mosque little remains. Indeed, there are very few parts that do not indicate reconstruction or enlargement. El-Bekri tells us the mosque was entirely rebuilt by Hassan, A.H. 84, with the exception of the mihrab, and seventy years later it was again taken down and rebuilt. Many alterations have been made since that date, even to a very recent period. The arrangement of this mosque differs but little from that of Damascus, or the greater work at Cordova, of which it was the undoubted prototype. In each case there are the prayer-chamber, consisting of a series of aisles separated by marble columns, the mihrab surmounted by a dome, and the *kibleh*, or shrine. Without is a large quadrangle surrounded by a colonnade, the back-wall forming the enclosure of the mosque, and in the centre of one end of the quadrangle, facing the central aisle of the prayer-chamber, is the *minar*, or minaret. The entire mosque is in the form of an irregular oblong, the longest side measuring about 425 feet and the shortest about 250 feet. The prayer-chamber, 250 feet long, and 120 feet wide, has a central aisle 20 feet wide, and a series of eight aisles, each of eight bays, on either side. These are separated by marble shafts of great beauty and varied colouring, with capitals and bases mostly of white marble, the spoil of the chief buildings of Roman Carthage and other towns in North Africa. The columns of the central aisle, as well as of the bays nearest the back or eastern wall of the mosque, are grouped together in pairs, and in some cases in threes. Their height is a little over 22 feet, those in the aisles varying from 15 to

16 feet. Above the shafts rise horse-shoe arches, and these carry a flat trabeated ceiling, enriched with gold and colour. The mihrab is crowned by a cupola vaulted in stone, richly glazed, and supported on the north side by two groups of three shafts each, and on the south side by engaged shafts. In each of these groups is one of the two columns of red porphyry, mentioned by El-Bekri as having been brought from Cæsarea (the modern town of Cherchel, in Algeria), and reputed to have been worth their weight in gold. The mihrab niche, flanked by columns of porphyry, with capitals of white marble removed from some Christian basilica, is of semicircular form, gorgeously decorated with lapis lazuli and inlays of mosaic and white marble. About midway up the recess runs an inscription: 'God is the Lord, God is from the beginning and has not been begotten. There is none equal to Him. Mahomet is His prophet. May God bless him and grant him eternal salvation!' On the left of the niche is a slab of white marble framed in a broad band of green marble, forming a memorial of the founder. On it are written the words, 'The Creator—The Praised—the Glorious—The Giver of Life.' On the right is the *mimbar*, or pulpit, made of some dark wood, almost black with age, and elaborately carved after the manner of Cairene work, the panels being all different. Close to it is the *maksourah*, a kind of resting or retiring-place for the *Imaums*, but formerly used, as El-Bekri informs us, as a tribune or gallery for women. It is screened off from the prayer-chamber by a framing of Cairene work of great excellence. The floor of the mosque is paved with irregular slabs of white and other marbles, and fitted together very roughly. The side of the prayer-chamber facing the court is enclosed by a series of great doors, corresponding with the aisles, the central door,

opening direct into the nave, being of larger dimensions and more richly carved. The colonnade surrounding the court or patio is formed by a double arcade, 20 feet wide, the front arches being of horse-shoe form and resting on coupled shafts of greyish marble, with white marble capitals of various designs, but mostly from some destroyed Roman edifices. The central archway of the southern façade, forming the main entrance to the prayer-chamber, is called 'The Beautiful Gate,' and has an archway of larger proportions, flanked by two smaller ones and surmounted by a cupola. The shafts supporting these arches are grouped in pairs, all monoliths of rare marbles, with richly carved composite capitals of white marble. Nearly in the centre of the northern side of the court rises the minar, which replaced the one attributed to Hassan, and of which there are vestiges at the south-west angle. It is a massive tower, clumsy in form, slightly tapering, and about 60 feet high. Above the parapet is a lantern of stone, crowned with a cupola on a vaulted arcade of good design, but so coated with white-wash that the lines of the architecture are almost effaced. Access is obtained by a flight of 125 steps within the tower, all made with slabs of marble of various colours, ill-fitted, as usual with the Arabs in adapting the materials of more ancient buildings. The view of the city from the top of the minar, and the aspect of the great plain bounded by an horizon of mountain and hill, is better seen than described. The panoramic view is marvellous. In El-Bekri's time there were ten gates or entrances to the mosque; at present there are five entrances to the great court, but one only is used. There is also an entrance direct into the prayer-chamber from the east side, which is still used by the Grand Mufti, the Archbishop, as it were, of Kairouan. Under the open

court, which is mostly paved with large squares of white and grey marble, now in a dilapidated condition and overgrown with weeds, are immense cisterns. Marble bases of Roman shafts cover the approaches. There are also two sun-dials, one horizontal and one vertical, serving to fix the exact hour of prayer. On the north-east side of the mosque, between the entrance and the ramparts, is a large area of open ground; intended, no doubt, by the original founder, as a resting-place for pilgrims within the walls. Here is the sacred well of Kafayat, or 'It is enough.' It appears to have existed before the foundation of Kairouan, and has never been known to fail. It is enclosed by a rough wall faced with slabs of marble, stained and yellowed by age and neglect, and worn into furrows through long usage.

The Mosque of the 'Three Gates,' situated nearly in the centre of the town, is venerated by the Arabs on account of its antiquity. It consists of only one small chamber, the roof being supported, as usual, by Roman shafts with capitals of various designs and of beautiful workmanship. The minar is a poor edifice, but, as usual with the mosques of Kairouan, there is an inscription in raised bricks on the surface of the wall. The stone carving on the façade, in bands of foliage and Arab characters, is beautifully chiselled, showing that this branch of art was encouraged in Kairouan during its period of prosperity. Among the numerous zaouias or mosque-tombs within the walls, the burying-place of the Mourabet family, one of the oldest in Kairouan, built in the fifteenth century, is the most noticeable. A great arch nearly 40 feet high, flanked by marble shafts, and filled in with a doorway of white marble and a window covered with a bronze grille, forms the entrance to the vestibule. The court within has two storeys of arcades,

MIMBAR IN DJAMAA EI-KEBIR

a marble basin in the centre, and is paved with slabs of black and white marble in geometric patterns. The shafts of the colonnade, which are of Moorish design, are of marble, but the arches are of stone. There are chambers at the angles, three of which contain tombs. Facing the entrance in the far side of the court is a small mosque, or family chapel as we should call it, where there is some excellent carving in marble in Kufic characters. The roof of the mosque is flat and trabeated, supported by sixteen Roman columns and arcaded over. South of the city, close to the ramparts, is the mosque-tomb of Sidi-Amar-Abada, the most conspicuous, as well as the most picturesque, of all the buildings in Kairouan, and, strange to relate, of very recent construction. It is crowned with six fluted domes, and was to have had seven. Internally it is very plain. In the vestibules are several wooden tables carved with inscriptions, and around most of the domes are broad bands of inscriptions in raised brickwork. This personage must have been a bit of a wag. His tomb has three cannon balls at his head and three at his feet. Huge swords covered with inscriptions adorn the walls, and a large pipe and tobacco-bowl are suspended over his remains. He died in Tunis about thirty-five years ago.

The Mosque of the 'Olive Tree,' a favourite designation in Tunisia, owing to the custom of planting a tree in the centre of the court, is outside the walls. This we did not visit, owing to the continuance of bad weather and the deplorable condition of the roads in the immediate vicinity of the city.

Outside the city walls are two large suburbs—mean, dirty, and devoid of interest, and here and there great mounds of *débris* and rubbish, heaped up higher than the ramparts, an accumulation of broken pottery, bones, and

vegetable matter cast out of the city for many centuries past. Nothing in all Tunisia bears stronger testimony to the neglect and inherent stupidity of the Arab than these enormous piles of decayed rubbish exposed to the rays of a tropical sun. Even the very cemeteries, where one might have expected a show of veneration for the remains of thousands of poor pilgrims, who have sought at Kairouan a last resting-place, are nothing but huge excrescences on the flat plain, the heaped-up bodies of twelve centuries.

To describe the numerous places of sepulture of the learned and pious men who have been attracted to Kairouan as one of the great cities of Mohammedanism, would involve constant repetition. Their tombs, many of them still highly venerated, are to be seen everywhere, both within and without the walls, dotting the landscape with their whitened koubbas, invariably of the same pattern, and, with few exceptions, devoid of interest to the observer. But any description of the monumental works of Kairouan would be incomplete without something more than passing reference to the tomb of Sidi-Sahab, 'the holy companion and friend of the Prophet,' more generally, though incorrectly, styled 'The Mosque of the Barber.' The remarkable series of buildings that have clustered round this sepulchre, embracing the tomb itself, a mosque, and a college for instruction in the Koran (a *medressen*), were formerly within the walls; the city, according to all accounts, being so extensive in the days of its prosperity that children had little placards suspended from their necks, indicating the quarter where their parents resided. At the present day this mosque is more than a quarter of a mile from the ramparts. The entrance is through a courtyard and under a Moorish archway forming the bottom storey of a minaret, the upper stages of which are faced

with tiles of enamelled earthenware of great beauty of colouring and of varied design. The vestibule within, of square shape, is crowned by a dome, its surface covered with elaborate stucco-work, and the walls have a dado of old Persian faience, surmounted by plaster fretwork in the form of panels. Seats are ranged round the chamber. A short flight of stairs leads to an arcaded cloister of seven bays, ranged around a narrow open court. The shafts here are of white marble of Arab design, with the exception of two which have been taken from some Roman edifice, and the voussoirs of the arches are painted black and white alternately. The floor is paved with highly glazed black and white tiles, some octagonal, and some zigzag pattern, and the walls are finished like those in the vestibule. But here, as throughout this series of buildings, which have been added to, altered and patched at various times to a very recent period, the tile-work is a strange mixture of good and bad. Broken pieces have been replaced by bits of Italian manufacture of gaudy colouring, or by native faience so badly fabricated that the glaze drops off the body of the tile. The ceilings of the cloister are flat and trabeated, painted in sombre colours, and quite in harmony with the older parts of the work. From the cloister you pass through a vestibule into a large open court, with a colonnade all round, the centre of one side being the entrance into a chamber about 20 feet square. This is the tomb of 'The Companion.' A subdued light through a series of thick stained-glass windows in the domed roof reveals the wooden sarcophagus in the centre, covered with palls, the upper one being of green velvet, embroidered with silver thread. Around it is a high bronze lattice, to which stones, gilt balls of earth from Mecca, and native ostrich

eggs, are attached. Banners and standards of rich fabrics are spread aloft, Eastern carpets, new and old, grace the floor, and from the centre of the richly decorated cupola is suspended a great chandelier of Venetian glass, with iron lances grouped round it. Persian faiences cover parts of the walls, the rest being in plaster arabesques, painted black and white. The door of the chamber, with its two little grilled windows on either side, is of Italian design and of recent date. The casings are of white marble, inlaid with panels of griotte, the symbols of the Prophet being carved over the openings. The material of these casings is rich, and the work is good, but it does not harmonise with the more sober colouring of the parts that are purely Arab.

From this large upper court, which is of the same character as the cloister already referred to, but much larger, you pass by a flight of steps to a lower court similarly planned. Here the shafts of white marble are of a more decorative character, but the rest of the work is simpler in design. This is the court of the College, consisting of a few offices, offensive to the eye as well as to the nose, and a series of small chambers or cells where the students reside. The instruction given here is confined to the study of the Koran and the Arabic language. Education, as understood amongst European nations, is unknown to these unprogressive people, and consequently ignorance and fanaticism, bred in such establishments as these, go hand in hand in upholding the tenets and superstitions of an unprogressive creed. The mosque attached to these buildings is small, and has no features of interest. It is of basilica form, with nave and aisles, columns of stone with plain capitals separating them, and with the mihrab at the end, the niche being flanked by two marble shafts.

If this tomb of 'The Companion' is the most venerated of all the holy places of Kairouan, it is also the most interesting from its associations, as well as from the pure style of its architecture, and its characteristic adornments. 'Sidi-Sahab,' says the legend, 'attended the Prophet in all his expeditions, and lived in his tent. One day, while being shaved, Mahomed gave him three hairs from his beard, which the faithful Companion religiously preserved all his life. Proceeding to Cairo at the death of the Prophet, he accompanied the warrior Okbah to Kairouan, where he died. Then, following his instructions, one of these hairs was placed on his tongue, the other two on his eyes.'

The interest attached to Kairouan, second only to Mecca as a seat of Mohammedan fanaticism, and the mystery overshadowing its isolation of twelve centuries, is centred in the great mosque of Okbah, its founder, rather than in the group of buildings consecrated to Sidi-Sahab, the companion of the Prophet. Any one intimate with the Mosque of Cordova, occupying nearly five times the area of its prototype at Kairouan, its forest of marble shafts, the wondrous intricacies of perspective, the lace-like walls, the gorgeous mihrab, and the beauty of its mosaic ornamentation, will experience a feeling of disappointment on entering the prayer-chamber of the African mosque. The beautiful shafts of marble and porphyry, with their varied capitals of white marble, are not wanting; but of the delicate stucco ornamentation, the *nuksh hadida* of the Arabs, so beautiful at Cordova, there are no traces here. The mihrab niche is on a small scale, and the tile-work, of which there are a few exquisite specimens, have been so injured and pierced through frequent reconstructions that the beauty of the whole suffers accordingly. The

builders' art must have been at a low ebb when the latest rebuilding of the mosque took place: columns and capitals ill-fitting are wedged up on a poor foundation with bits of olive-wood; arches are tied together with beams of wood, innocent of either plane or chisel; and the floor is paved with broken slabs of marble and stone, shape or pattern being wholly disregarded. Neglect has much to answer for, and waning enthusiasm, so noticeable in all the religious edifices of Tunisia, will not suffice to maintain these holy places or save them from inevitable ruin. It is to be hoped that the mosque of 'The Companion,' so complete in itself as a specimen of native workmanship, and so thoroughly in harmony with Arab ways, will at least be spared, and a fund for its maintenance be some day forthcoming.

How entirely changed is the aspect of the surrounding country! The forest of which the historian speaks has totally disappeared, and the entire plain is treeless and without shelter. Kairouan has neither wells nor fountains, and the absence of running water, so refreshing to the senses in any Eastern town, produces a depressing effect that cannot fail to influence the character as well as the health of the inhabitants.

The population of Kairouan, which may amount to some 10,000 souls,\* was entirely Arab till the city came under the French protectorate. Jew traders, as well

---

\* In a country where no census exists, estimates of population must be conjectural. The number of the inhabitants of Kairouan has been very differently given by various writers. The Chevalier de Hesse-Wartegg, writing in 1882, fixes the population at 30,000; M. Victor Cambon, 1885, at 25,000; M. V. Guérin, 1862, at 12,000; Lieut.-Col. Sir R. L. Playfair, 1877, after considering the reports of Mr. Wood, Consul-General at Tunis at that date, at 15,000; M. Pellissier at 12,000, adding, 'I should be inclined to put it down at considerably less than 10,000.'

as a few Maltese, were not long in following the footsteps of the French soldiers, and before long will establish themselves here as permanently as in other towns in the Regency.

From their custom of intermarriage, the sedentary nature of their occupations, and their general want of activity, from their alleged immorality, if not from other causes, they are neither a handsome nor a hardy people. In spite of their fanaticism and exclusiveness, they offered no resistance whatever when the French took their city ; and they now suffer the yoke of the infidel with a meekness and resignation scarcely to be expected from a people at one time so arrogant and uncompromising.\* Nearly every traveller to Kairouan has spoken of the averted looks, the imprecations, the insults, even the stone-throwing, to which he was subject at the hands of the people, both children and adults. We experienced no annoyance of any kind, although generally alone, unaccompanied even by our servants, penetrating without hesitation into some of the narrowest and least-frequented alleys. Far from this being the case, we were favoured on many occasions by much attention and courtesy. While sketching under a doorway, where we had taken refuge out of the rain, the proprietor of the house brought us a seat and a cup of coffee, presenting them with a graceful salute. Again, while inspecting the

---

\* 'Like so many other cities, Kairouan is also one of the most corrupt ; and the class of Tunisian dancing-girls is recruited in a great measure in that town of mosques and religious fraternities. The inhabitants of the city of Okbah pride themselves on living as parasites, at the expense of the faithful ; consequently they are very degenerate, and have generally impure blood. Cancers, scrofula, all kinds of infirmities, give the inhabitants a repulsive appearance ; they are wanting in strength for work, as they were in energy for resistance on the occasion of the French occupation.'—*Nouvelle Géographie Universelle*, xi. 232.

interior of the Grand Mosque, notwithstanding it was on a Friday, the numerous worshippers paused in their devotions, and without a murmur or an angry look suffered us to pass between them and the kibla. The native attendant, a servant of the mosque, who acted as our guide, merely turned up a corner of the rich carpet with which the floor of the kibla was covered, as a hint that it was not to be defiled by the tread of the infidel.

Rain had not ceased falling during the whole of our last day at Kairouan; but towards sundown a thunder-storm burst over the city, accompanied by such a down-pour that we were fain to content ourselves with the four bare walls of our miserable lodging, and went to sleep with grave apprehensions for the morrow.

## CHAPTER XIX.

### KAIROUAN TO SBEITLA.

*November 22nd and 23rd. Distance, 111 kilomètres.*

TEDIOUS TRAVELLING—MORE RAIN—A DREARY PLAIN—DJEBEL TROZZA  
—WANT OF POPULATION—THE CAMP AT HADJEB-EL-AÏOUN—KIND  
RECEPTION—FIRST NIGHT IN A TENT—A RUINED CHRISTIAN TOWN—  
OUED GILMA—NUMEROUS NEGLECTED WATERCOURSES—INNUMER-  
ABLE RUINS—BIRDS—FIRST VIEW OF SBEITLA—WE STICK IN THE  
OUED—A SEARCH FOR A RESTING-PLACE IN THE DARK—A WALK  
AMONG THE RUINS BY MOONLIGHT.

**T**HE distance from Kairouan to Hadjeb-el-Aïoun, where the French are establishing a strong camp, and where we had arranged to seek shelter for the night, is 66 kilomètres. We left Kairouan at 8.30 a.m., and did not reach our destination until 7.30 p.m.—eleven hours constant travelling, our four little horses trudging on bravely, without food, and with only one drink of water. The endurance of these miserable-looking, galled beasts, one with swollen fetlocks, seemed marvellous. Their only reward was the whip, both butt and lash, and their stall for the night was the open sky. Of Mohammed's instructions concerning kindness to animals the modern Arab takes no notice.

The morning of November 22nd was dull and cloudy. Scarcely had we passed the city gate when the rain began again, and continued to fall steadily until mid-day. We consulted our coachman, an intelligent dark-skinned Arab from the desert, whether we should return to the

city, but as he was of decided opinion that the weather would clear we pressed steadily forward through the mud and slush.

If the route from Soussa to Kairouan was dull, that further west\* was still more depressing—an absolute flat, devoid of cultivation, traversed by occasional marshes, and dotted with low bushes and scrub, covered by millions of small white snails, which at the distance looked like blossoms. The bushes frequently grow on small mounds, similar to those we had noticed a few days before. For four hours we journeyed slowly on over this melancholy plain, with nothing more diverting than the occasional crossing of an oued, until about mid-day, when, lurching in our carriage *en route*, we were delighted to find ourselves once more in the vicinity of hills. The roads were deep in mire; the rain, which had so far continued to fall steadily, now ceased, the clouds broke, and the prospect of reaching Hadjeb-el-Aïoun that evening looked encouraging. Djebel Trozza now towered up to our right, and the scenery on either side the track was inviting. At two o'clock we pulled through a small stream issuing from the Ain-el-Kraib, once spanned by a bridge, the remains of which still exist, and close to the spot where stands a square stone-built fondouk. This is the western boundary of the plain, at least sixty miles across, with Kairouan as its centre. Here the scenery is very weird, huge masses of rock peeping above the rough verdure, indicating by their stratification some

---

\* In April, 1876, Lieut.-Col. Sir R. L. Playfair performed the journey from Kairouan to Sbeitla, passing over almost the same ground. He has given an interesting account in Chapter XX. of his *Travels in the Footsteps of Bruce*. The volume contains two views of Sbeitla from drawings by Bruce, viz. the Entrance to the Hieron, and the back wall of the Three Temples.

violent disturbance at the surface at no remote period. A few miles further we entered another plain, varied by occasional undulations, and gay with arbutus, bushes of juniper and different sorts of dwarf pine, with here and there a solitary olive-tree. The sun now set with a wild splendour, and the whole sky was lit up with gorgeous colouring. Fortunately a rising wind helped to dry the muddy track, and a welcome moon, shining forth with unwonted clearness, befriended us in the hour of need. In spite of the rain which had fallen during the morning and previous day, we had not been inconvenienced by the swelling of the oueds; indeed, many of them were comparatively dry, although we experienced considerable difficulty in crossing a marsh nearly a mile wide before reaching the rising ground, on the summit of which the French camp was temporarily pitched.

We had accomplished the entire distance from Kairouan to Hadjeb-el-Aïoun without passing either town or village; indeed, with the exception of the solitary fondouk already mentioned, there were no signs of any settled population. A few goubies here and there, and flocks of sheep and goats visible on the rising ground, indicated the presence of Bedouin tribes, moving from place to place.

Captain Perronell, the chief officer of the camp, to whom we were furnished with an introduction, received us most cordially, placing a tent (a very dilapidated one, it must be owned) at our disposal. A frugal supper, composed of the provisions we had brought from Soussa, supplemented by a regulation loaf from the canteen, was quickly prepared and more rapidly dispatched, and wearied out with our day's journey we soon fell asleep. The wind had fortunately subsided; otherwise the rents in the canvas would have admitted more air than would

have been agreeable. As it was, the temperature in this exposed and elevated position became very chilly as the night advanced, and both overcoats and wrappers were welcome coverings.

At the time of our visit the camp of Hadjeb-el-Aïoun was in process of construction, and the necessary installations were not yet completed. Hitherto the French head-quarters of the district had been on the banks of the Oued Gilma, or Djilma, a spot selected on account of the abundance of the water in that part of the stream. The position being low and unhealthy, and the water found to be injurious to health, the troops were removed to the site of the present camp, occupying the plateau of a small hill, at the foot of which is a copious spring of the purest water. The position is altogether admirable, and the panoramic view most extensive.

The state of our tent, with its tattered canvas, was so little conducive to protracted slumber, that we were up before sunrise and about the camp, watching the soldiers under the light of the waning moon perform their early duties, and giving instructions for our start.

By eight o'clock we were on the track again, passing over a pleasant stretch of green sward, where large flocks of sheep and goats were finding abundant pasture, and five miles further on we noted to our right some Roman ruins on rising ground. Blocks of hewn stone were still standing, but no buildings were traceable. We then traversed a wild, uncultivated plain, covered with scrub, the mountains rising majestically right and left. At about a hundred yards from the road we reached, at ten o'clock, the ruins of a town of great extent. On examining the remains we observed (1) a rectangular enclosure of Christian origin, twenty-five paces long by fifteen paces broad, built of horizontal and vertical stones

alternately, the interspaces being filled in with rubble. This system of constructing walls, frequently employed by the Romans in the later days of the Empire, was introduced by them into Britain, and afterwards adopted by the Saxons, of which we have several examples existing at the present day. The wall of this structure was strengthened by square buttresses two feet wide on three sides. There were small windows between the buttresses, an apsidal end, and the substructure of an arcade dividing the nave and aisles. There were two doorways, one to each aisle. The plan of this early Christian basilica, of which there are numerous examples in North Africa, is familiar to us in the plan and arrangement of churches in our own country. (2) A vaulted construction, probably the remains of the baths, but too ruined to judge of the extent and outline of the building. All the buildings showed indications of having been reconstructed with the materials of former edifices. There are numerous foundations of other buildings which have now disappeared, but no inscribed stones were discernible.

For a full hour we journeyed over a vast plain, literally strewn with stones, the remains of former habitations, but where at present there are neither houses nor tents, nor any attempt at cultivation. At mid-day we reached the abandoned French camp on the Oued Gilma, and lunched in one of the few huts yet standing. As wood is so scarce in these parts the buildings were being gutted, and the materials, such as roofs, windows, doors, &c., were being transported to the new establishment at Hadjeb-el-Aïoun. The distance from Hadjeb-el-Aïoun to Oued Gilma is computed at 21 kilomètres.

At a quarter-past one o'clock we left our halting-place, crossing the oued exactly at the point where a

Roman aqueduct, level with the ground, but now in ruins, spanned the stream, bringing the water to a cistern of some magnitude a mile or so distant. This indicated a former settlement, of which, as far as we could judge, no other vestiges remain.

From Oued Gilma to Sbeitla, a distance of about twenty-five kilomètres, we crossed the beds of water-courses no less than seven times. They were fortunately dry, or nearly so, but as they fill very quickly after rain, and as there is not a single bridge, the traveller will do well not to attempt a visit to Sbeitla except during the dry season. He may reach his destination, but it is doubtful whether he would be able to return.

The whole district is literally strewn with Roman remains, giving the country the appearance of a vast cemetery. Scarcely a mile is passed without the presence of some ruined structure or groups of chiselled stones, requiring time and careful study to form conclusions as to their value. Here huge blocks of hewn stone half buried in the ground stand upright in pairs, surmounted by a lintel; there a cistern, of which the vaulting has fallen in, filling the space with a mass of *débris*. At other places the foundations of a fortress, or a basilica adapted to the performance of Christian rites, or the solid substructure of a Roman bath. What a field of study for the archæologist! what a melancholy page for the historian! Here must have dwelt formerly a numerous and active population. These innumerable and apparently unconnected oueds, at one time of the year beds of stones without a trace of water, at another rushing torrents swollen and impassable, were once running streams, embanked and spanned by bridges, filling the cisterns, and fertilising the soil. This barren, trackless plain, was formerly cultivated and intersected

by good roads. A few shepherds, mostly Bedouins, were the only human beings we had met during the whole day ; not a single habitation as far as the eye could compass. On the other hand we observed a great number of birds —magpies, partridges in great quantities, innumerable crested larks and other small birds, besides bustards, hawks, and birds of prey of larger kinds.

The sun was sinking behind the hills as we caught the first glimpse of the ruins of Sbeitla. The fatigue of a long day's journey was forgotten, and pressing on as quickly as our tired animals would permit, we arrived on the sandy margins of the river to which Sbeitla owes its name. Animated by the voice of their driver the horses dashed into the stream, struggled, and then stuck fast in the sandy bed. To add to the dilemma, one of the horses, by the violence of his efforts, had snapped the traces, and quietly walked away from the carriage, slaking his thirst as he went. The position was not pleasant, darkness was coming on, and Sbeitla was still at some distance. In an instant boots were off, trousers tucked up, and we were above our knees in the water. We were four, including our coachman and the servant. With a good will we went to work, and after half-an-hour's exertion were fortunate in reaching the other side of the stream.

There is no accommodation of any kind at Sbeitla. This we knew, the difficulty being to find in the dark (for the moon had not yet risen, and twilight is unknown in these latitudes) a resting-place for the night. Each of us started in a different direction to explore the dilapidated edifices of which the dim outlines loomed forth in the obscurity, stumbling as we went over the countless stones with which the surface is everywhere encumbered. A modern vaulted structure was at last discovered with-

out door or windows, and here we determined to take up our quarters. Dinner over, and the arrangements for the night completed, we sauntered among the weird ruins that rose ghostlike over the far-stretching plain. The moon was up in all its splendour, and the stillness of the air was broken only by the bubbling waters of the river we had just crossed, and the occasional screech of an owl, whose 'ancient solitary reign' we were disturbing.

## CHAPTER XX.

### SBEITLA, THE ANCIENT SUFETULA.

*November 23rd to 26th.*

SUFETULA PAST AND PRESENT—ITS REMAINS—THE THREE TEMPLES—  
THE MONUMENTAL ENTRANCE TO THE HIERON—THE TRIUMPHAL  
ARCH—THE AQUEDUCT—EXPLORATION NECESSARY.

**B**EAUTIFUL indeed must have been the Roman city of Sufetula in the fifth century. Situated on rising ground, at a point where the great highway from Carthage to the interior intersected the main road from Theveste seawards, its position was a commanding one, and for a long period it became a centre of considerable commercial activity.\* An unusually fertile soil, forests of pine-trees, and a river clear as crystal that ran merrily by the city walls in a never-failing stream, contributed to make Sufetula a

---

\* 'In the neighbourhood of Sbeitla the bed of the river is of compact limestone; on either side of it numerous tepid springs are seen bubbling up from the earth, accompanied by free carbonic acid gas. These unite into one stream, of volume sufficient to supply an immense city, quite as large as the fountain of Zaghouan, and for more than a mile it thus flows in a clear and beautiful stream, never dry even in the hottest part of summer. The temperature is just high enough to make it slightly warm in winter, but quite sufficiently cool in summer.'—Lieut.-Col. Sir R. L. Playfair, *Travels in the Footsteps of Bruce*, p. 180.

place of delight for the wealthy colonists of North Africa.\*

To-day all is changed—a solitary shepherd tending his flock is the only human being one is likely to meet where ‘merchants once did congregate;’ the trees are gone, the plains are arid or clothed with rough herbage, and all signs of habitation have been swept away. The river alone continues to flow as of old, lost some few miles lower down in the arid sand, and coming to the surface again at some lower level, like most of the neglected streams of this country.† Yet, in spite of prevailing desolation, this spot, so far removed from human dwellings—its ruined fanes outlined sharp and

\* The spot reminds one of the so-called ‘marble rocks’ of Jubbe-poor, though on a much smaller scale.

† ‘My brethren have dealt deceitfully as a brook, and as the stream of brooks they pass away.’—*Job*, vi. 15.

Edrisi, the Arab geographer of the twelfth century, writes:—‘Sobeitala was, before the Arab invasion, the town of Gerges (Gregory), king (prefect) of the Romans of Africa; it was remarkable for its extent as well as for the beauty of its situation, for its abundant water, for the mildness of its climate, and for its wealth; it was surrounded by orchards and gardens. The Musulmans conquered it during the first year of the Hegira, and put the great king Gerges to death.’

Other writers inform us that Gerges, sometimes written Gregorius, had revolted from the Byzantine Empire, and, with the assistance of native tribes, had made himself ruler over a large territory, of which Sufetula was about the centre. With the appearance of the Arabs in this remote corner of North Africa commenced the struggle for supremacy between the representatives of Christianity and the followers of Mahomet. The city, having no walls of defence, soon succumbed to a horde of invaders. Gregorius was slain, and the treasures of a wealthy population were seized by the victorious army. So great was the plunder, we are told, that every foot-soldier received 1000 dinars, and every horseman 3000 dinars, equal to more than 80% of our money. The records of Sufetula cease with this calamity, by which one of the chief strongholds of the Christian creed was destroyed, and Christianity in Africa may be said to have received its final blow.

clear against the sky, its weird stones standing ghost-like on the outstretched plain, the stillness of the air broken only by the babbling of the waters—has much to charm the eye and quicken the imagination.

The exact boundaries of Sufetula would be difficult to determine, as there are no remains of any outer walls. The lines of streets and foundations of numerous buildings, public and private, are still traceable for nearly a mile in one direction, and somewhat less than half a mile in another; and several noble edifices of a monumental character, partly ruined, bear testimony to the extent and ancient prosperity of this remote town. Indeed, its very remoteness has been the best protector of its monuments, for there is little doubt that if any settled population had existed within a radius of twenty miles, and any means of transport over a country now difficult of access at most seasons, the few buildings still remaining would long since have been overthrown. It is worthy of note that some twenty years ago the late Sidi-Mustafa-ben-Azooz, of Nefta (an oasis south of Sbeitla), selected this spot as a site for a town, and actually commenced building operations here, using the materials of the ancient city. Fortune did not favour his enterprise; work soon ceased, and the place was once more abandoned. Had the scheme succeeded, scarcely a monument would now be standing to mark the site of old Sufetula.

It is not our intention to enter into elaborate details of the monumental remains. We limit ourselves to a general description of the few structures illustrated on these pages, sufficient to show what Sufetula must have been in the days of its prosperity. The buildings, with few exceptions, were constructed with a very hard, compact limestone, quite white when quarried, but acquiring

a rich golden hue after long exposure to the sun. The other facing materials were limestone also, but of different shades of colour, from pale rose to deep red, from light grey to dark slate.

The principal monument that has withstood the ravages of time and the neglect of more than twelve centuries consists of a range of three temples, placed side by side and partly attached. This may be assigned to the reign of Antoninus Pius, A.D. 138-161. The porticoes, forming the fronts, were within a large walled enclosure measuring about 240 feet by 200 feet, to which access was obtained through a monumental gateway facing the temples. The back wall of these edifices, still in fair preservation, was the back of the enclosure, and behind this ran one of the streets of the city. It will be sufficient to state that the central temple was of larger proportions than the two that flanked it, that it was of the Composite order (a mixture of the Ionic and the Corinthian, invented by the Romans and very largely used in the embellishment of buildings during the Empire), and that the side-temples were of the Corinthian order. The porticoes are entirely overthrown; the broken shafts, which were all monoliths more than thirty feet long, the enriched capitals, and huge fragments of sculptured ornamentation, lie piled up one on the other in a majestic and imposing mass. The whole enclosure was paved with immense slabs of stone, and from the general appearance of the remains it is reasonable to suppose that there were other temples or monumental edifices within the enclosure. The gateway above mentioned, dedicated, as the inscription states, to Antoninus Pius, consisted of a large central arch and two lateral ones; within the gateway was a portico communicating with a colonnade, which appears to have been

THE THREE TEMPLES AT SBEITLA

carried round three sides of the enclosure, abutting against the side-walls of the temples. The gateway was evidently intended to face the central temple, but, for some reason difficult to account for, it is fully twenty feet to the west of the central line or axis of the enclosure.

The custom of enclosing sacred edifices with walls of defence originated at some remote period, when temples were used as depositories for the treasure of the city, as well as affording shelter to women and children in times of invasion. There was an instance of this at Carthage, where the Temple of Æsculapius, the largest in the city, stood within the citadel. The Parthenon at Athens was within the walls of the Acropolis, and the Temple of Jupiter in Rome was in the Capitol. At Balbec also there is an enclosure commonly called the Hieron, bearing some resemblance, though on a larger scale, to this one at Sufetula.

The next monument in importance is a triumphal arch on the south-east side, forming the principal entrance to the city from the great highway that communicated with the coast. It appears to have been built at the close of the reign of Maximianus and the first of the reign of his successor, Constantine the Great. An inscription over the arch records the dedication of the monument to both these Emperors, A.D. 305-306.

Sufetula is bounded on the north-east side by the precipitous banks of a ravine, through which flows the river now known as the Oued Sbeitla. The retaining walls on this side of the city have entirely disappeared, and the bridge which appears, from the mass of *débris* below, to have spanned the river at this point and formed a communication with a suburb on the opposite bank, has been washed away. Some hundred yards higher up the stream a partially ruined construction, serving the double

purpose of an aqueduct and a foot-bridge, but now dis-used, crosses the river. It is of comparatively modern construction, and, though it possesses no merit of design, forms a pleasing and picturesque feature in the landscape.

The explorations at Sbeitla (for in the main Sbeitla is Sufetula in ruins, and nothing more) have not hitherto been conducted in a systematic way. The French authorities, however, taking note of the remains, which are very numerous, have set up a series of stones to mark the lines of the principal streets, and made a few excavations, with a view to discovering the levels of the old city. Anyhow it is satisfactory to note that the *Société des Monuments Historiques* is keeping a watchful eye over these remarkable ruins, and that several inscribed stones, throwing much light on the history of Sufetula, have been recently unearthed.

## CHAPTER XXI.

### KASSERINE, THE ANCIENT COLONIA SCILLITANA, OR SCILLIUM.

JOURNEY MODIFIED—START FOR KASSERINE—ROMAN RUINS—ESPARTO  
GRASS—THE SITE OF SCILLIUM—ITS IMPORTANCE—MODERN KAS-  
SERINE—THE TRIUMPHAL ARCH—THE MAUSOLEUM.

**O**UR intention was to journey southward to Feriana and Gafsa, where we had letters of introduction; but the objects of interest in these remote parts of North Africa are too few and insignificant to compensate the traveller for successive days of fatigue and inconvenience. We resolved, therefore, to proceed to Kasserine, a distance of nearly thirty-five kilomètres, and return to Sbeitla the same day. A plunge into the tepid waters of the river while the moon was still up, and before the sun had risen, was a good preparation for ten hours' dusty journey. At daybreak we were off, entering a tract of country traversed by numerous oueds and entirely devoid of cultivation. Remains of Roman towns, villages, and farm-houses innumerable, were visible on either side the tract, and tufts of esparto grass, abundant over a portion of the plain, broke the wearying monotony of miles of scrub and stunted bushes.

Without halting (for we had lunched in the carriage),

we arrived soon after 11 a.m. on the banks of the Oued El-Darb, which was crossed without difficulty, and in a few minutes we reached the foot of the hill on the top of which stood the city of Scillium, or Scillitana Colonia of the Romans, but now better known as Kasserine.

The site of Scillium was well chosen. Placed on the verge of a rocky plateau and commanding a grand sweep of fruitful country, the situation was as strong for the purposes of defence as it was pleasant in its aspect. The mountains of Nouba and Selloum on one side, and the Chambi range on the other, contributed by picturesqueness of outline to the beauty of the landscape, and a river of water, clear as crystal, skirted the city wall and irrigated the great plain. To judge from the long lines of streets, still easily traceable, from the solid and extensive foundations of buildings now entirely demolished, and from the enormous blocks of white stone scattered over a vast extent of ground, the city must have been one of wealth and importance.

To-day the once beautiful river is neglected, and its never-failing stream, which forces itself with difficulty through the narrowed channel amid luxuriant oleanders, is soon lost in the region of sand. The site of the once flourishing Colonia Scillitana is perfect desolation. Two whitened koubbas, which have been stuck up among the ruined monuments, stamp the nationality of the present desecrators, and a hut or two, surrounded by a few miserable goubies, are all that answer for the town of Kasserine, as marked on modern maps.

Of the monuments of Scillium, two only of importance have escaped the ravages of time: (1) A Triumphal Arch forming the entrance to the city on the south-east side; in connection with the highway to Sufetula and Carthage. This is an imposing monument, more remarkable for its

REMAINS OF A MAUSOLEUM AT KASRIN.

---

solidity of construction than for any grace of outline. (2) Below the city, and near the river bank, a mausoleum, still in fair preservation, forms a conspicuous feature in the landscape. In spite of the numerous descriptions of this monument, often, as Guérin (I. 319) justly remarks, in terms so hyperbolic as to touch the ridiculous, we cannot pass it by without notice.

This mausoleum, three stages in height, and standing on a pyramid of steps now mostly covered by the ground, was erected by M. Flavius Secundus in honour of his parents and other members of his family, who are fully described in one of the lengthy inscriptions that nearly covers one entire face. In addition, there are no less than ninety hexameters and twenty elegiacs, in which the charms of the city and the neighbouring country are the subject of verse. The height of the monument was about fifty feet. At the summit was fixed a bronze cock, placed, as the quaint inscription below further informs us, 'above the clouds, and so near to heaven, that if nature had given it a voice it would have compelled all the gods by its morning song to get up early.'\*

At two o'clock we took our departure from Kasserine, and regained Sbeitla at 7 p.m.

---

\* M. Pellissier, an intelligent traveller in this country, has remarked, with reference to the monuments of Kasserine, that if those 'still standing in a country now desolate attest a former prosperity which confounds our imagination, these verses, composed in a remote town scarcely known to history, prove how the civilising influence of Rome had awakened the intelligence and rural nature of a people once numerous and wealthy, but to-day without either art or literature or even settled inhabitants. It may fairly be assumed, that at the time of the Antonines the flourishing cities of Byzacene, of which Scillium was a remote town, were peopled with Romanised Africans and supplied with schools capable of rivalling those of Italy.'

## CHAPTER XXII.

### SBEITLA TO SBIBA.

*November 27th to 29th.*

OUR HABITATION AT SBEITLA—WE LEAVE WITH REGRET—NUMEROUS BIRDS—DELICIOUS SOLITUDE—OUED-GILMA—HADJEB-EL-AÏOUN—A DAY IN CAMP—THE DOCTOR AND HIS PATIENTS—OUR EQUIPAGE—WE START—DJEBEL MERILAH—CARAVANS—HOW FAR TO SBIBA?—WE SLEEP IN A GOURBI—A BAD NIGHT'S REST.

**T**HE rough vault that sheltered us during our sojourn at Sbeitla was a portion of an Arab dwelling commenced about twenty years ago, and to which reference has already been made. All else was in ruins. Rough masonry blackened by smoke, an earthen floor, dirty and uneven, a chamber with one opening but without either door or window, is not an exaggerated description of what we jokingly called our 'Grand Hôtel.' The soft air of this favoured region and the extreme beauty of the weather on the occasion of our visit did more than compensate for the discomfiture of such rough quarters.

Before the first morning broke, the Arabs in the neighbourhood had heard of our presence, and a couple of fowls and a score of eggs were tendered and paid for without much unnecessary bargaining. This addition to our modest larder afforded our servant-interpreter an opportunity of displaying his powers of cookery, at which,

to our agreeable surprise, he was no novice; and with the help of a tin of Swiss milk and another of vegetables, a potfull of *poulet à la chasseur* formed an excellent stock-dish at the evening meal. It was with very great regret—indeed, with reluctance—we bade farewell to pleasant Sbeitla on the afternoon of November 27th. The three days spent there had been days of real enjoyment. Undisturbed by Arabs, we were at full liberty to explore the site of the ancient city, to make sketches of the principal monuments, and with tape and rule to measure the stones one by one, with a view to making such restorations as are annexed to these pages. Day and night succeeded each other in the same calm beauty. The moon was up, and but for the fluttering of bats and owls among the ruined temples, the stealthy movement of an occasional jackal, or the hoarse bark of an Arab watch-dog, silence reigned supreme.\*

Soon after 1 in the afternoon we left Sbeitla, recrossing the river without difficulty, and reaching the deserted camp at Oued-Gilma in four hours, where we found accommodation.

At 7.30 the following morning we started for Hadjebel-Aïoun, where we arrived at 10.15. About half way we had the pleasure of greeting Captain Perronell on his way to the abandoned camp, who had courteously left instructions with M. Lapeine of the 'Bureau de Renseignements' to render us every assistance. With-

---

\* No one fond of sport should venture into the interior of this country without a gun. Tunisia abounds in game. Coveys of partridges, tame as domestic poultry, eagles and hawks, the lesser bustard, commonly known as the *poule de Carthage*, crested larks, thrushes, and other small birds, are innumerable. The gazelle as well as the wild boar haunts the plains; the panther and the hyena are as yet far from exterminated.

out this friendly aid further movements would have been almost impossible. M. Lapeine's perfect knowledge of the country made it clear that we could not advance northward in a carriage, but that the journey must be accomplished in the saddle. In spite of every endeavour on the part of our kind friend to procure at once the necessary guides and cattle, we could not start before the following morning.

The day in camp, thanks to his hospitality and the good fellowship of the doctor of the regiment, was spent most agreeably. It happened to be a reception-day for the sick of the neighbourhood, and about a dozen or more natives of both sexes soon arrived. The jovial doctor, cigar in mouth, examined them in the hospital enclosure; and if his remedies were not of the greatest efficacy, he had a word of kindness and encouragement for each sufferer, as male or female passed from his hands. The scene was more curious than pleasant. The first patient was a little girl of ten or twelve years, whose emaciated and ulcerated body clearly indicated that she was suffering from the misdeeds of her parents. Then came two women, the one troubled by the common malady, ophthalmia, the other rheumatism. The doctor gave them something to rub themselves with; probably a bath would have been more efficacious. As they were leaving, one of the women, about forty years of age, and red haired, returned abruptly, and begged the doctor to give her something that would enable her to bear children. The native attendants hurried her away. It was altogether a melancholy sight. Cleanliness and good water were what these poor people most needed.

At 7 a.m. on the following morning the beasts and attendants, a motley collection, were before our tent.

The guide selected for us (son of the owner of most of the animals, and quite a dandy in his way) was mounted in true Arab fashion on a good-looking native nag, equipped with high-backed saddle, stirrup-irons resembling small square tea-trays, a bridle of embossed leather, and an enormous and uselessly cruel bit. Our domestic was provided with a rather broken-down old pony similarly equipped. For ourselves there was a small mule with a pad, and a very disreputable pony, that might have been taken from the plough, with an old military saddle much the worse for wear. A large white donkey, by far the most capable and energetic beast of the collection, carried our provisions and scanty baggage, with a pack on his back and his head free of bit or bridle. It followed the guide's horse with exemplary steadiness and exactitude—a model donkey. Our cavalcade was completed by a nondescript man with little clothing, and that little exceedingly dirty; he rode a grey mare, whose only trappings were a halter and a sack; who he was or why he had joined our party we could not make out; it could scarcely have been for the sake of the scenery, and it is certain that he took no interest in ruins. We hazarded many rough guesses as to the object this gentleman had in view in travelling so far from home, and at last came to the conclusion that he wanted to sell the grey mare.

Half an hour sufficed for the labour of loading the donkey and other arrangements, and at 7.30 a.m., bidding adieu to the officers who had done us such good service, we started northward under a cloudless sky and in the best of spirits. Had we abandoned our carriage on our previous arrival at Hadjeb-el-Aïoun, and proceeded to Sbeitla on horseback, we should have been able to ride thence direct to Sbiba without having

to retrace our steps, and thus avoiding the ascent of Djebel Merilah.

The distance from Hadjeb-el-Aïoun to Sbiba is about 50 kilomètres. The road we were told was easy, and, furnished as we were with a letter to the Caïd, we felt no misgivings as to reaching the place before sundown, and finding some accommodation on our arrival.

After nearly four hours steady travelling over a dreary scrub-covered plain, intersected by two or three dry oueds, we reached the hills. Viewed from afar, the Tunisian hills in the interior are not inviting, and do not improve on closer proximity.

In another half hour we entered the wild and rugged pass through Djebel Merilah, and after a short descent on the northern slopes approached the banks of the river Hatob, a stream of some importance. A large caravan was in the act of crossing; the women and children were bathing and washing their clothes, while the men were urging the camels and donkeys with shouts and threats as they lingered to enjoy the refreshing stream. Curiosity and the sight of a few sous soon brought the children around us. Among them was a girl of about twelve years with a bundle on her back, which on examination proved, to our surprise, to be her own baby. Crossing the river, we dismounted for lunch, and enjoyed an hour's repose and shelter from the sun under the welcome shade of a bank luxuriant with oleanders.

Our guide, whose intellect was of limited capacity, made up for his stupidity by extra devotions, and our repose was enlivened by watching his fervent prayers and energetic prostrations, his forehead touching the ground at frequent intervals.

Before 2 p.m. we were once more in the saddle,

and in a quarter of an hour crossed the same river again. A still more numerous convoy, composed entirely of camels, was revelling in the stream or stealthily endeavouring to roll in the cool waters, to the detriment of the merchandise on their backs. Some of the women and children were mounted, the latter bare-headed, without any protection from the glaring sun, and firmly tied on the animals' backs.

The Hatob again crossed, we found ourselves on a plain clothed with arbutus, and in an hour and a half entered another plain, of greater extent and redolent with wild thyme.

'Is Sbiba yet far distant?' we inquired of our guide, whose ignorance of the country we had suspected for some time.

He made no reply, but leaving us, galloped to some rising ground, whence he could better survey the surrounding country. On his return he led us to a cluster of gourbies in the valley.

'Here we have to sleep,' he said.

'How far are we from Sbiba?' we repeated.

'Too far off to reach it to-night.'

This indefinite reply was very unsatisfactory; and putting the same question to an Arab who, preceded by the usual pack of yelping curs, came from one of the gourbies to ascertain what we wanted, the answer was, 'Two kilomètres.'

'Then we will go on!' and, in spite of our guide's protestations and reluctance, on we went accordingly. It was now getting dark. Another lot of gourbies was struck, out of which came the customary welcome of growling and barking dogs.

'Is this Sbiba?'

'Yes; the whole district is Sbiba.'

‘Where does the Caïd reside?’

‘Over yonder hill, a long distance off.’

‘We have a letter which we wish delivered to him at once.’

No one volunteered as messenger. Threats were useless; but the promise of a coin at last induced one of the Arabs to undertake the errand. That he would do so forthwith was by no means certain. The darkness of the night and the exhausted condition of our animals prevented further progress. Our vexation was augmented by knowing that under the Caïd’s protection our quarters would have been secure, if not comfortable, whereas at this spot there was no accommodation whatever.

Resigning ourselves to our fate, there was no alternative but to accept the shelter of a gourbi, or, rather, part of one, which a member of the tribe placed at our disposal. The gourbi, or Arab tent, is about as uncomfortable inside as it is ugly from without. The covering, or cloth of camel’s hair, dark grey in colour, is pitched so low that it is impossible to stand upright under any part of it. In the hope that our letter to the Caïd might yet procure more comfortable quarters we waited in patience.

No messenger arrived, and supper being announced, we crawled under the covering and made such arrangements for the night as the limited floor-space would admit. The part of the tent allotted to us was that in which the proprietor kept his harness, agricultural implements, sacks, &c., and in which his dog and poultry were accustomed to pass the night. The former had been put as closely as possible together in a heap; the latter turned out, and a piece of coarse sackcloth had been suspended across the tent so as to form a partition between us and the Arab and his wife and child in the

other half. The floor of the tent was, of course, the bare earth. A large fire was lit outside, around which sat our servants and some Arabs; our horses were picketed in a row, with their forefeet all tied to a rope, the ends of which were staked to the ground.

Just as we were lying down to rest a dog, probably the one whose resting-place we had usurped, forced his way through the brushwood occupying the foot or so of space between the tent-cloth and the ground, and regarded us for a few moments with anything but a pleasant eye. Sticks being fortunately ready at hand, he did not wait to try their effect. Amid the squalling of the baby on the other side of the partition, who seemed to be aware that something unusual was taking place, the barking of the dogs without, and the talking of the Arabs we at last, from sheer lassitude, fell asleep. Slumber was of short duration, for long before daylight two cocks (one immediately over our heads, the other in a neighbouring gourbi) commenced a duo, which they continued with such energy and regularity as to put an end to further repose.

## CHAPTER XXIII.

### SBIBA TO ZANFOUR.

*About 80 kilomètres. November 30th to December 1st.*

THE CAÏD OF SBIBA—AN EARLY MORNING WALK—SUFES AND ITS GARDENS  
—THE RUINS—A HOSPITABLE SHEIK—COUSCOUSOU—A NIGHT IN A  
COWHOUSE—WANT OF POPULATION—FILTHY KSOUR—FIRST SIGHT OF  
ZANFOUR.

**W**HEN, at 5 a.m., in the waning moonlight, we crawled out of the gourbi, unrefreshed and benumbed by the cold air which had been blowing in upon us all night from under the tent cloth, we were informed that the Caïd had already arrived, and was awaiting our pleasure. On being conducted to his presence, we found him seated upon a mat on the slope of the mountain before a blazing fire, which two of his attendants were feeding with brushwood. The scene was very impressive. He was a portly man of handsome features and commanding aspect, and his greeting was stately yet graceful. The usual salutation was gone through—we shook hands, and then each carried to his lips the hand which the friend had just pressed. ‘Would the Caïd honour us by drinking a cup of tea in our tent?’ The invitation was accepted, and while the Caïd sipped the beverage and crunched some English biscuits, which he seemed greatly to relish, we

endeavoured to get from him some information concerning the ruins of Sufes, to which he kindly offered to accompany us. Our beasts had yet to be saddled and burdened, and as the air was very chilly we begged to be allowed to proceed on foot—a request which appeared to astonish our conductor, who mounted his mule, and, accompanied by his two attendants, led the way. The ruins were yet a good two miles distant, and we reached them just as the sun appeared above the horizon.

Sufes, or Colonia Sufetanæ, but now known as Sbiba, must have been a place of considerable importance. Guérin estimates the outer wall at six kilomètres in extent. Like most Roman towns in North Africa, it occupied the foot of a hill, or rather the spurs of several hills, and extended some distance on to the plain. An abundant stream, which we crossed more than once as we approached the spot, ran through the town and irrigated the surrounding country. The whole district, even when El-Bekri visited it in the eleventh century, was covered with gardens, and produced saffron of the finest quality. The town itself contained a college and several baths. The Oued Sbiba is now lost in the arid soil at a short distance from its source; cultivation is entirely neglected, the site is absolutely deserted, and the buildings are so completely ruined that careful study and excavation would be needed for their identification. One huge mass of rubble walling, the remains of the ancient Thermæ, still stands up boldly from among the countless stones which encumber the soil.

The Caïd pressed us to spend the day at Sbiba, and begged to be allowed to prepare a good dinner. We declined with thanks his proffered hospitality, but gratefully accepted the services of one of his attendants, whom he placed at our disposal to guide us on our way. At

8 a.m. we took our leave of the kind Caïd and continued our route. Among the ruins we observed a great number of pigeons and some large crows. The distance from Sbiba to Ksour is about fifty-six kilomètres. Our road lay at first over a vast uncultivated plain, Djebel Reukaha being on our left, and Djebel Djiljie on our right. At 10.15 we passed a handsome koubba, called Sidi-Mehrani, with a fluted dome, and shortly afterwards Roman ruins on both sides of the track. There was more cultivation than usual in this district, and gourbies were numerous. Threshing was being done, as in the days of the Israelites, by horses trampling out the corn.

At midday we struck the Oued Sgiff, which flowed on the right of our path. We did not cross the river, but passed between it and a koubba, Sidi-Ahmed-Zei, on our left. On the other side of the stream we observed another koubba, called Sidi-Monella. Here we lunched.

At one o'clock we were again in the saddle, and for an hour saw no landmark other than a small koubba to our left, and a few Roman remains utterly ruined amid a desolate country.

At 2.30 we crossed a dry oued, and noticed Roman remains to our left. We now traversed a wild and romantic country, among barren rocky hills covered with stones, passing at 3.30 an extensive ruined Roman post on elevated ground, while a few gourbies were observable in the valley.

It was now past four o'clock, and it was evident we could not reach Ksour that evening. Some stone buildings surrounded by gourbies, occupying what seemed to be the site of a Roman settlement, appeared to our left. It was the habitation of a sheik, and we resolved to beg his hospitality for the night. The sheik, a fair-haired man of prepossessing appearance, was seated cross-

legged on the ground in front of his gourbi, watching the ploughing and other agricultural pursuits in the valley below. He rose at our approach, and received us with great politeness. When our interpreter communicated to him our request, he placed his hand on his breast, and with a graceful bow intimated that his dwelling was at our disposal. 'Would we prefer to sleep in a gourbi or in a stone building?' We chose the latter, which, upon inspection, proved to be a small cow-house. Some calves, awaiting the return of their mothers, were removed to make room for us, the sheik's best carpet was spread on the ground, and we were soon comfortably installed. Our host, whose energy was on a par with his urbanity, now begged permission to provide our evening meal,—an offer which we thankfully accepted. 'Should the couscous be of chicken or of mutton?' As we had for the last few days been living chiefly on poultry and eggs, and as the Arabs who surrounded their chief seemed to desire mutton, we pronounced for the latter. The reason why the sheik's retainers desired mutton may be explained in a word. An animal had to be killed for the dish, of which what we left became their perquisite. The couple of fowls, which would have sufficed had we chosen poultry, we should pretty well have consumed, and little would have remained for them; but, hungry as we were, we could scarcely have been able to clear off a whole sheep, or even a lamb or kid. We had to wait some time for our repast, which had to be prepared from the very beginning, but it came at last. On a huge, shallow wooden bowl, filled with couscous, a meal prepared in a manner peculiar to the Arabs, lay an entire lamb or kid; a small one it must be owned, yet the whole animal, less the head, was there. A smaller bowl contained gravy. No utensils of any kind accompanied the dish. Fortu-

nately we had our own plates, knives, and forks, otherwise we should have been embarrassed. We cut off the parts which appeared to us the most delicate, or the easiest to get at, and made an excellent repast, for the food was really, in its way, well cooked. Our servant then removed the dishes, which were speedily cleared off by the Arabs, who were eagerly awaiting the moment when our hunger should be appeased and the remains fall to their share. No wine was, of course, offered, nor even a cup or glass of any sort to drink water.\*

On the following morning our host was already at the opening of our habitation (opening is used advisedly, as there was no door) when we arose. He willingly joined us in a cup of tea, and, as his men were all busy, mounted his mule and escorted us himself to Ksour. We started at 7.30 a.m. Our way lay over undulating ground,

---

\* 'The roasted sheep is a dish worthy of introduction into the most civilised society. The animal is skinned and cleaned within a few moments of his death; a stake six feet long is passed through his body, entering at the mouth, and a large fire having been prepared beforehand and allowed to subside into a state of hot embers without flame, the animal is laid across it, supported on two posts, constantly turned round, and basted with butter till sufficiently cooked; it is then served up by the stake being stuck upright in the earth, or supported transversely on big stones; and then it is consumed with the aid only of Nature's knives and forks. It requires some little education to know exactly where to search for the best morsels; but our hosts were always courteous enough to tear these off and present them to us.

'Couscousou well prepared is by no means a dish to be despised. The raw material is simply semolina of hard wheat, the grains of which are large, carefully sifted from the flour, and prepared in a peculiar manner by the ladies of the household, who roll it about and turn it over with their hands in large wooden dishes. When this has to be cooked it is placed in a small earthen dish pierced with holes, on the top of another, in which a soup of meat and vegetables is prepared. The steam causes the grain to swell and soften without rendering it sodden. When the couscousou is sufficiently cooked it is placed in a

across well-cultivated fields,\* and in an hour and a half we reached Ksour.

Since we left Kairouan we had seen neither town nor village, and excepting the French hut encampment, no permanent human habitation. Ksour, which possesses a mosque and two or three koubbas, may contain 400 or 500 inhabitants. Although a mountain stream passes through it, the town is, as usual, filthy in the extreme; and the stream, the banks of which are encumbered with dung and refuse of every kind, is befouled before it reaches the dwelling-houses. In spite of every exertion, we were not able to procure a piece of bread anywhere in the town.

We tarried no longer than the time needed for the sheik of the district to be apprised of our presence. On his arrival our kind conductor bid us adieu and returned home.

In a journey through the interior, where hospitality and other services cannot be repaid with coin, the traveller will do well to provide himself with articles for

---

large flat dish; the soup, highly seasoned with red pepper, and thus called *mergäa*, is poured over it; the meat or fowls and vegetables, if any are procurable, are placed on the top, perhaps with a morsel of butter; and thus prepared, in the tent of an Arab of rank and means, it is as palatable a dish as a hungry traveller need ever desire to have set before him. Sometimes, instead of the meat and soup, sugar or honey, raisins and milk are substituted. The only thing I can suggest as better than either of them is both in succession.

‘When the guests have finished their repast the dishes are passed on to the higher retainers, and so on to the various ranks and classes, till nothing remains.’

\* ‘The wheat of this country, little different from ours, does not, however, produce a pure and nutritive flour. The meal, obtained by grinding between two portable millstones, is coarse.’—ABBÉ POIRET, *Travels through Barbary*, 1785-86.

presents. Cutlery or bright-printed handkerchiefs are always acceptable.

Soon after leaving Ksour, the distance from which place to Zanfour is about 24 kilomètres, we observed some Roman remains, but of no great importance, on a hill to our left.

At 11 a.m. we passed through a wild and romantic gorge, where women were washing in the stream, although we perceived no habitations in the vicinity.

Two more hours of steady travelling were needed before we caught sight of the ruins of Zanfour. The view from the hill at the foot of which Zanfour is situated is very fine and of great extent. We made straight for the shady banks of the river, where we lunched and rested our beasts, whose impatience to roll in the stream threatened to deprive us of our provisions and ruin the harness.

## CHAPTER XXIV.

### ZANFOUR TO AIN-HEDJAH.

*December 2nd. Distance about 85 kilomètres.*

FINE SITUATION OF ZANFOUR — BLED-ES-SERS — GLORIOUS SUNSET —  
SOUK-EL-TLETA—WE STICK IN THE MUD OF OUED SIDI-HAMI—SIDI-  
BOU-ROUIS — DEFILE OF DJEBEL DOU-KOHIL — DIFFICULT TRACKS —

DARKNESS—SHOULD WE SLEEP IN A KOUBBA?—WE PUSH FORWARD  
—THE FONDOUK AT AIN-HEDJAH—FELINE VISITORS DISTURB REPOSE.

**M**ENCHIR ZANFOUR covers the site of the Roman city of Assuras. Built on a plateau raised above the level of the plain, and watered by a river which rises among the surrounding hills, Assuras boasted a situation equal to its importance. A terrible convulsion of nature must have been the chief cause of its destruction. Huge stones, split and broken by superhuman agency, lie scattered over the site. Among the ruins of many stately monuments, the remains of three triumphal arches are still conspicuous, one only retaining traces of architectural detail. There are also three walls of the cella of a temple, the columns of its portico, no doubt, still lying far below the present surface.

Patient and systematic exploration of the site would probably bring to light many objects of historical value. No time, however, should be lost, for at the moment of our visit some Arabs with asses, and provided with

hatchets and shovels, were actively filling their panniers with broken stones. They even offered to break off any piece of carving or other ornamental work we might covet, and to transport it at our pleasure. It appeared that these stones were being removed to an adjacent plain for constructing a French military post

The fondouk of Souk-el-Tleta, our destination for the night, being plainly visible from Henchir Zanfour and within a short hour's ride, we had ample time for a careful inspection of these wide-spread ruins. Just before sunset we started, crossing the river, where are the remains of a Roman bridge, and entering the Bled-es-Sers, a low-lying plain of great fertility, but rendered swampy in many places by the uncontrolled waters of the Oued Zanfour, which are lost below the surface a little further down. An unusual quantity of cattle were grazing in the rich pasture, and numerous goubies dotted on the plain indicated the presence of a considerable population.

As we neared Souk-el-Tleta a sunset of unusual magnificence, even in these regions, where sunset effects are marvellously beautiful, illumined the whole sky with most gorgeous hues. Every point of the compass seemed ablaze, and hill and mountain caught up the reflected light. But the peculiarity of this glorious phenomenon was that in the west the colours were the least intense. Short was its duration. The fairy-like tints faded away before one had time to realise them, and the whole landscape was, as it were in a moment, enveloped in obscurity.

The fondouk of Souk-el-Tleta was in process of reconstruction, or, rather, the dens which had hitherto been allotted to human beings had been given up to quadrupeds, and a kind of café, which was in future to serve that purpose, was not yet completed. We had to

make the best of it, surrounded by half-mixed mortar and heaps of building materials. The dogs from the neighbouring goubies, the great nuisances of this country, surrounded us, barking and snarling while the keeper of the establishment went for his key to unlock the door. Nor did they discontinue their howlings the whole night long.

Dawn was a welcome termination of an unpleasant night. We were in the saddle as the sun was rising, but unable to start, owing to the non-arrival of the guide, whom we had demanded over-night from the sheik of this district. At last he appeared, mounted on a mare with a foal by her side. A long morning's work could not be done in this fashion, and we had not proceeded far before he galloped off in order to change his mount. A slight mishap occurred, which still further delayed our progress. The track crossed the Oued Sidi-Hami, a winding stream which ran between banks of slippery mud. Our guide, who was some distance ahead, had already crossed, but at what exact point we had failed to note. The steed of one of our party feeling himself sinking in the mud, made a desperate plunge, and in so doing gained the opposite bank, but threw his rider. The sumpter donkey, a brave beast who was always well to the front, now attempted to cross, but, being heavily burdened, stuck fast in the mud up to his girth. Our guides and servant dismounted, and their united efforts were required to extricate the poor ass from this 'slough of despond.'

Owing to these little accidents, we were not clear of the marshes of Bled-es-Sers until 8.25 a.m., although we had started before 7. The track now took a north-easterly direction over the slopes of Djebel Trisha, commanding some fine stretches of scenery. In two

hours our guide had reached the confines of his district, and at Sidi-bou-Rouis, where there is a koubba and a small Arab cemetery, departed, leaving us in charge of the sheik of that place.

Crossing the Tessa, a charming stream, where we watered the horses and filled our bottles, we reached at 11 a.m. some unimportant Roman remains on our left hand. For half an hour the route lay over a well-cultivated plain, and then ascended Djebel Bou-Kohil. Here commenced a wild defile, formerly spanned by a Roman bridge, the masonry of the abutments being still undisturbed. Along the whole of this route as far as Bordj-Messaoudi, which we sighted at midday, the scenery is very grand. The mountains, although treeless, are well covered with green shrubs, and the passes are abrupt, startling, and most picturesque. There is no attempt at road-making in this region, and our sure-footed little animals had frequently to pick their way round the precipitous mountain-sides, among rolling stones, and along paths a couple of feet wide, formed of mud, now, fortunately, dry and hard. Locomotion after rain must be dangerous, if not impossible.

Bordj-Messaoudi, 3 kilomètres distant in the valley below, and built on the site of the Roman town of Thacia, consists at the present day of a single house and a fondouk, of which the white walls shone forth like jewels in the bright sunlight as we descended the northern side of the mountain. Here we lunched and rested our cattle. There are many remains scattered about in the vicinity of Bordj-Messaoudi, but nothing of any special interest. The house above mentioned is supported by Roman shafts, while carved stones and other relics decorate the garden.

At 1.45 p.m. we left Bordj-Messaoudi in the direction

of TebourSouk. The sheik who had accompanied us thus far bid us adieu, directing us to follow the telegraph wires which communicated with that town.

For several miles the track passed over a grassy plain called Gorat-el-Kerib, lying between the hills of Jouaouda and Sidi Abdallah-ech-Cheid. Roman remains, either of villages or farm-houses, are visible at frequent intervals.

At 3.30 p.m. we traversed Sidi-Abd-er-Reubbou, the site of the Roman town of Musti. Here a koubba and several Arab hovels disfigure the monumental remains. Among these a gateway of some importance stands conspicuous, but devoid of any special architectural merit.\*

The town stands on high ground, a pretty stream in which we watered our horses flowing through it. More Roman remains were visible on the plain at some distance, and shafts and carved stones thrown down and half-buried in the soil arrested our attention all along the road.

It was now 5 p.m., and the sun was nearing the horizon. We had no local guide with us, and the young Arab who had accompanied us from Hadjeb-el-Aïoun, and who was quite ignorant of the country, began to express a doubt whether we should reach our destination at Ain-Hedjah that night. He reined up his horse and proceeded to shout at the top of his voice, in order to attract the attention of an Arab settlement at a little

---

\* An inscribed stone lying close by appears to have escaped the observant eye of V. Guérin, but was noted by Berbrugger:—

VAEPROMISERIT  
 CTIONEMMVSTANIS  
 DEDICAVIT DATIS  
 SIS . PON . . . ARIBVS.

distance from the track. Several men soon arrived ; but not being able to get any definite information, we left them talking, and proceeded to explore a ruined koubba close to the roadside, with a view to ascertaining whether in case of need we might find a shelter there for the night. It appeared to be a mausoleum, approached through a courtyard planted with trees. There were two other chambers besides that in which reposed the relics of the marabout, or, rather, marabouts, for there were two tombstones.

We had already been quartered in such strange and uncomfortable places that it was a matter of indifference whether, for once in a way, we should sleep alongside the bones of saintly Mohammedans. Perhaps the Arabs, little as they regarded the sanctuary crumbling to decay, might have objected to its desecration by conversion into a lodging-house for infidels. Under stress of circumstances, and the prospect of sleeping *à la belle étoile*, we should probably have overstepped these objections, had not our interpreter at last informed us, as the result of much parleying with the Arabs, that the fondouk of Ain-Hedjah was only two kilomètres distant. It was well that we pressed forward as fast as the wearied condition of the horses would allow ; for the sun had set, darkness was closing around us, and some awkward ravines had still to be passed. Another cluster of goubies, visible at a distance by the fires ignited before them, was a welcome sight. Here we obtained a guide to the fondouk, which we reached at half-past six, thoroughly tired out.

The fondouk of Ain-Hedjah is a modern addition to one of the vast edifices still standing, but partially ruined, of the ancient city of Agbia. A more miserable place it is difficult to conceive. The chamber placed at our disposal was a dilapidated café, the walls of which were

blackened with smoke, and the earthen floor strewn with rubbish. Through two openings in the wall, intended, probably, for windows, but now partially blocked up by loose bricks, and through a door impossible to close, the dust of the surrounding country and the filth from the adjoining caravansera were blown in by every gust of wind. Rough stones encumbered the earthen bench on which we had to sleep, and broken Roman shafts, unchopped firewood, and other *débris*, constituted the furniture of this lordly establishment. On our arrival a couple of Arabs, dozing away in a corner, were turned out unceremoniously by the proprietor, who informed us that the entire apartment was now at our disposal. Some live embers in the fireplace accelerated the preparation of our evening meal, cheered by the presence of all the domestic animals belonging to the establishment. The most persistent of these visitors were two half-wild cats, who made free with the place during the whole night, frisking among the pots and kettles, upsetting everything, jumping over our bodies, and making continuous slumber impossible. A shot from a revolver only made them more lively.

The approximate distances accomplished to-day were: Zanfour to Souk-el-Tleta, 8 kilomètrès; Souk-el-Tleta to Bordj-Messaoudi, 56 kilomètrès; Bordj-Messaoudi to Ain-Hedjah, 21 kilomètrès.

## CHAPTER XXV.

### AIN-HEDJAH AND DOUGGA.

*December 3rd.*

THE CITADEL—DOUGGA—FINE SITUATION—THE TEMPLE IN THE DISTANCE—FILTHY CONDITION OF DOUGGA—THE CISTERNS AND OTHER REMAINS—THE TEMPLE—THE TRIUMPHAL ARCH—THE MAUSOLEUM—INSCRIPTION REMOVED TO THE BRITISH MUSEUM—THE SHEIK OF DOUGGA—DEPARTURE FOR TEBOURSOUK.

**T**HERE are few visible remains here of any special interest of the old Roman town of Agbia that covered the site of the modern Hedjah. An immense Byzantine fortress, with square towers at the angles, constructed entirely with the stones of older buildings, is the only edifice now standing, and from its large dimensions is a conspicuous object.\*

Leaving our men to saddle the animals and follow us at their leisure, we started early the following morning

---

\* These fortresses are a marked feature in North Africa, and have a peculiar interest to archæologists as the prototype of the mediæval castle. The strongholds erected by the Romans during their five centuries of occupation of the country were destroyed by the Vandals, with the exception of the citadel and walls of Carthage; so that, when the armies of Justinian landed on its shores, this imprudent race was left without defences. The Byzantine generals in their turn not only reinstated the defences, but constructed fortresses and strong enclosures in nearly every Roman town in the interior, destroying the principal public buildings that had survived the destructive sway of the Vandals, and using up stone and marble indiscriminately in their works of defence.

for Dougga, an uphill walk of about an hour, under the guidance of an old Arab.

Thugga, as it was called by the Romans, but now known as Dougga, occupies one of the finest sites in the interior of North Africa, and must have once covered an area of nearly three square miles. The hill on which it stands rises boldly from a plain of great fertility, over which Thugga looked in three directions. The ruined portico of a temple dedicated to Jupiter and Minerva, still erect when nearly everything else has disappeared, stands out on the crown of the hill, a structure of great beauty. A more lovely spot than Dougga, even in its present condition and when seen at a distance, it is not easy to picture. The temple forms the main feature of a cluster of buildings which spring, as if by magic, out of a luxuriant olive-grove. But 'distance lends enchantment to the view'; the enchantment is dispelled as soon as the first Arab habitation is reached, and modern Dougga in its degradation and dirt stands before one. We had become accustomed to the squalor and neglect of Arab towns, but the aspect of Dougga fairly startled us. Mud, over a foot deep in many places, rendered the narrow streets and lanes almost impassable even at this dry season, and heaps of dung and refuse, festering under the hot sun and emitting loathsome stenches, encumbered every corner. The temple, so beautiful at a distance, is befouled by ordure, and rude stone walls of miserable dwellings are clustered round its noble remains. The rivulet which we observed at the foot of the hill on our approach, appears to have been insufficient for the requirements of the inhabitants in the days of its prosperity, for Thugga was provided with a series of spacious cisterns, now almost entirely ruined. Carved and inscribed stones are built into the walls of Arab houses,

and the remains of three triumphal arches, a second ruined temple, a theatre, and two fountains, that were embellished with colonnades like those at Zaghouan bear some testimony to the magnificence of the ancient city. The ruined monuments which still command admiration, viz.—(1) the Temple of Jupiter and Minerva; (2) a Triumphal Arch; (3) a Mausoleum once bearing the famous bi-lingual\* (Libyo-Punico) inscription removed by the late Sir Thomas Reade, and now in the British Museum, are scattered over the hillside.

(1.) The temple appears to have been built during the reign of Marcus Aurelius and his colleague L. Aurelius Verus, between A.D. 161 and 169, at the expense of two brothers of the name of Marcius, whose names were inscribed on a pedestal raised in their honour. The columns of the portico, with one exception, are monoliths, and, including the capital and base, are 33 feet high. The doorway of the cella, which is still standing, is of immense proportions. The jambs are 27 feet long, each in one stone, and the lintel is 22 feet long. For elegance of design, this portico will compare favourably with any of the better-known examples in Rome or elsewhere.†

---

\* The Libyan tongue was spoken by the native tribes of North Africa, Punic being confined to the citizens of Carthage and of the coast towns. The language of diplomacy was Greek. Hannibal, we know, wrote in Greek.

† 'Bruce states that the material of which this temple is built is white marble. If this is not actually the case, it is a very compact and crystalline limestone, full of fossil-shells, and susceptible of receiving a high polish. When new, it must have been even more effective than the finest description of marble. I am inclined to believe it is none other than the *Lumachella antica*, one of the lost Numidian marbles, of which only two or three specimens are known to exist.'—Lieut.-Col. Sir R. L. Playfair, *Travels in the Footsteps of Bruce*, p. 220.

(2.) The remains of the one triumphal arch still standing do not demand any lengthened notice. The upper portion, long since overthrown, lies buried under the soil; its shafts, white like marble, have almost disappeared, and decorative fragments peep out above the grass or between the roots of an adjoining olive-grove.

(3.) The ruined mausoleum, commemorative of a distinguished Numidian who lived before the commencement of the Christian era, has attracted a larger share of attention than many of the more important monuments of North Africa, and not undeservedly. Apart from the beauty of its position on the hillside, and in the middle of an olive-garden, the structure itself, to judge by the remains, possessed considerable architectural merit. Fifty years ago it was in fair preservation, and was only deficient in the pyramid of graduated steps forming the crowning portion of the edifice. To-day the lower stage, forming a square of about twenty-two feet, and the steps forming the base, are all that remain. The story of its demolition some forty years ago is not pleasant to relate. It appears that Sir T. Reade, at that time British Consul-General at Tunis, obtained permission from the Bey to remove from the monument two stones, bearing the remarkable bi-lingual inscription above referred to, the only known example of a dedication in the Libyan and Punic tongues, and consequently esteemed of great value. Instead of personally superintending the operation, the Consul appears to have ordered the removal of these inscribed blocks, without instructing the workmen how it was to be done. The mausoleum is of solid construction, built with immense blocks of cut stone, and consequently the removal of any of the lower facing stones would require unusual care. The modern Arab

workman is neither renowned for skill nor ingenuity, and his clumsy tools and primitive appliances are ill-adapted for any delicate building operations. In this case he commenced at the summit, throwing down every stone till he arrived at the two bearing the inscription. These were purchased by our Government at the sale of Sir T. Reade's collection, and may be seen, in excellent preservation, in the British Museum.

In a small open space among the wretched hovels which compose the modern village of Dougga, we perceived some five or six Arabs squatting on a dungheap, and basking in the sun, in apparent silence and unconcerned indolence. These men, as we afterwards learned, were the sheik of the place and his friends or attendants. They observed our movements with apathy. On our addressing the sheik, however, through the interpreter, he responded courteously to our demands, sending a man to point out the ruins, and furnishing us with a guide to Teboursouk.

Teboursouk is but an hour's journey from Dougga, the road passing by the most part through olive-groves, among which numerous white koubbas are conspicuous.

## CHAPTER XXVI.

### TEBOURSOUK TO TUNIS.

*December 4th.*

TEBOURSOUK—CONTAINS LITTLE OF INTEREST—DEPARTURE—PICTURESQUE COUNTRY—AMONG THE MOUNTAINS—CROSSING THE MEDJERDAH—RETROSPECT—TUNIS AGAIN.

**A**FTER the dirty condition of Dougga and its utter lifelessness, Teboursouk appeared to us a tolerably clean and lively town. If the by-streets are dull and sparsely populated, the main street at any rate is animated, fairly-well paved, and, as Arab towns go, decently kept.\*

Teboursouk, the ancient Thibursicum, possesses

---

\* 'It did not present itself in the same light to M. Guérin, who thus describes it: 'The interior of the town bears the appearance of great misery and complete decay; at least half the houses are abandoned and in ruins. The streets are revoltingly filthy, and it is surprising that the plague does not yearly decimate the inhabitants. As it is, the population is reduced to 2500 souls. No public monument, externally at least, merits the traveller's attention. Only a few fine relics of antiquity are to be found here and there (generally mutilated and disfigured by layers of whitewash) in Arab buildings, which are themselves falling into ruins. The upper quarters of the town are nearly deserted, and the few inhabitants one meets seem to wander like phantoms in the solitary streets, obstructed at intervals by heaps of refuse. The lower quarters are more peopled; not even so thickly, however, as of old, for I was told—in 1862—that the depopulation had greatly increased during the last fifteen to twenty years.'—*Voyage, II.*, 114.

many of the requirements of a flourishing place. It is situated on high ground, in the midst of a fertile country, and has an abundant supply of water. It is enclosed by a wall of defence, with square towers at intervals, constructed by the Byzantines with the materials of the old Roman town. Apart from this indication of former strength and importance, Teboursouk has no vestiges of architectural monuments.

Not finding any objects of special interest to detain us, we took our departure at midday for Beja, or rather for the railway-station of that name, where we had arranged to take the train for Tunis, under the guidance of a mounted Arab, whom the sheik was good enough to place at our disposal.

For a considerable distance we rode under the pleasant shade of olive-trees, and then crossing the Oued Falhar or Khallad, entered a region of hill and dale, clothed with verdure and abounding in picturesque scenery. At 1.15 we traversed a valley, in which many Roman remains were discernible near the track, while others dotted the sides of adjacent hills. These ruins are called Henchir Ain-el-Caïd. By two o'clock we had entered the splendid defile between Djebel Mahia and Djebel Kabika, and while winding round the picturesque slopes of these mountains at a great altitude, caught occasional glimpses of the distant and fantastic peak of Zaghuan. Until 3.30 the track, quite imperceptible except to an experienced guide, steep and dangerous in some parts, and at others encumbered with huge lumps of rock, lay among the mountains. It was with a feeling of thankfulness that we at last attained the summit, and looking down the northern slopes saw the great plain of the Medjerdah, with the railway-station, indicated by a white spot in the far distance, lying at our feet.

After an hour or more of gradual descent, an unexpected difficulty presented itself. Between the foot of the mountain and the railway-station flows the serpentine Medjerdah, a bridgeless stream, capricious at all seasons, and after heavy rains impassable. At this point it is pretty wide. Weary of the saddle, we had dismounted and walked down the hill, leaving our horses to the care of the Arabs. Somehow or other the animals, following in single file, had got loose, and making straight for the water, were soon up to their girths in mid-stream. To increase the unpleasantness of the situation, the guide who had conducted us from Teboursouk had gone back, after having safely piloted us through the mountains, and our own men, one of whom called himself the guide, had no knowledge of the river, nor of any spot where it was fordable.

After the exercise of much patience and the use of a little violent language, of which, fortunately, our stupid Arabs did not understand a single word, the animals were at last brought safely to the bank ; and, as a piece of good luck in a part of the country where scarcely half-a-dozen people may be seen in the course of a whole day, an Arab happened to be passing on the opposite side. A fordable spot higher up the stream was indicated, and we got safely across.

Scarcely had we reached the station when the train, the last and only one, steamed in. We had barely time to settle for our horses and book our luggage. Looking out of the carriage-window as our train moved off, we observed, with considerable amusement, the commencement of a dispute amongst our Arabs about the division of the sum of money they had just received. A goodly pile of dollars had to be counted and divided proportionately between them, according to an arrangement best

known to themselves. A financial settlement such as this—a matter of easy adjustment among any civilised people—would be the subject of deep deliberation with such primitive folk: much counting and weighing the pieces of silver, and perhaps a final settlement after several sittings.

At 8.30 p.m. we were back again in Tunis. We had thus, in fourteen days from the date of leaving Soussa, accomplished a somewhat difficult journey without misadventure. Favoured by most beautiful weather, unvaried except by the one important downpour before leaving Kairouan, we had been enabled to traverse parts of the country that would be inaccessible after heavy or continuous rains. The innumerable oueds that intersect most parts of Tunisia, especially in the vicinity of Sbeitla and Kasserin, and the defiles between Ksour and the mountains bordering the plain of the Medjerdah, will always be a source of risk and inconvenience to travellers in the absence of fine weather. The time we had devoted to this journey, so full of interest, was, on retrospect, too short. It would have been pleasant to have loitered longer on the road, to have stepped a little further from the track to examine more distant monumental remains, to have lingered during the heat of midday by the banks of some of the pleasant streams, or stopped to note more fully the beauty of a mountain pass or a distant landscape. Impossible; our only resting-place for the night was often so many kilomètres distant, and it was imperative to reach it before sundown, at the risk of finding ourselves shelterless as night set in, and when darkness would render locomotion, especially among the mountains, absolutely impossible. Hot as was the mid-day sun, the nights were frequently chilly, and, in default of a well-closed

room, all our wrappers were needed to keep out the cold. It may be as well to mention that waterproof sheeting, air-pillows, and a couple of rugs each, constituted our bedding. We found these quite sufficient. They were very portable, and when rolled up inside the india-rubber covering occupied but little space. For any lengthened stay in the interior of this country a tent is indispensable. This necessitates an extra baggage animal.

## CHAPTER XXVII.

### LA CALLE TO EL-KEF AND CHEMTOU.

*March 7th to 16th.*

LA CALLE—BEAUTIFUL SCENERY—TABARCA—THE KHOMAIR COUNTRY—  
AIN-DRAHAM—FERNANA—BULLA REGIA—SOUK-EL-ARBĀĀ—HIGH  
LATITUDES—EL-KEF—A STORM—CHEMTOU AND ITS QUARRIES OF  
MARBLE—CROSS THE FRONTIER INTO ALGERIA.

**A** FEW years hence an excursion through the country of the Khomair\* may be of every-day occurrence. Less than ten years ago, no European would have ventured to ride through the heart of this wild mountainous region except with a powerful escort; and even the soldiers of the Bey regarded its inhabitants with so much dread that they hesitated to pass certain well-defined spots on the line of frontier. No region of North Africa was less known to the outside world. It was left as a blank space on most maps, and the fierceness and brutal habits of the untamed tribes that formed the Khomair population, though probably much exaggerated, contributed more than anything else to secure for them entire control over the territory they occupied. Guide-books up to this date say little about a comparatively unknown district; but since the French protectorate of Tunisia, and the consequent disarming of the population, there is no reason why Europeans should not visit every corner of

---

\* Generally written Kroumir. Sing. Khomiri : Plur. Khomair.

it without more risk than in other thinly inhabited parts of North Africa.

It was our good fortune to ride through the Khomair country in the month of March, 1885, when vegetation was bursting forth in all the luxuriance of early spring, and when the verdure of winter herbage had not yet been parched by the scorching rays of a tropical sun.

The best approach is by way of La Calle,\* a small coast town about three hours' journey by steamer from the port of Bône. There is no harbour nor safe anchorage, and as landing is impossible in bad weather, it is advisable to ascertain before leaving Bône whether the steamer will land passengers at La Calle.

The weather being favourable for landing, there was little difficulty in reaching the shore, clean lodging and good food being obtained at a modest little establishment styled Hôtel d'Orient. From the proprietor we obtained two horses and the services of an intelligent Arab, and on the following morning left by the new carriage road, then in formation, for Tabarca, the first town on the Tunisian frontier. Our baggage consisted of knapsacks, convenient for slipping over the back of an animal, rugs, umbrellas, and revolvers.

---

\* The French name of this town serves as a memorial of the settlement at Cape Negro, some miles eastward, of a few merchants from Havre, for the purpose of opening up a trade in coral, transferred 150 years later to La Calle. It is now a small town, chiefly inhabited by Italians who, till recently, carried on a considerable trade in sardine-salting as well as in coral fishery. But the coral banks have either shifted or, more probably, have been exhausted, and the sardines have found other quarters on the coast, where they are left undisturbed. The old method of fishing is still pursued. 'They fish,' says Edrisi, the geographer of the twelfth century, 'by means of implements to which a number of hempen bags are attached. These are put in motion, the threads become entangled in the coral, upon which the fishermen draw up the instruments and extract the coral in great abundance.'

After passing through a forest of magnificent cork trees and oaks the track skirted the Guerra el-Hout, or Lake of Fish, at that time of the year a sheet of water, but in the summer months converted into a marsh of a pestilential nature. Beyond are some valuable lead mines worked by an English company, and near here a lower road branches off to the right by way of the Col de Babouch to Ain-Draham ; an upper one that we followed proceeding in a north-easterly direction through a mountainous country, embracing some of the finest scenery in Tunisia. Hill and dale here succeed each other, clothed with wild luxuriance of vegetation ; a jungle of brushwood and myrtle, rose-laurels and heath, narcissus and daffodil, and wild herbs, sweet to the smell and agreeable to the eye. After passing the frontier some ten miles from La Calle the road turned northward and approached the coast line. A few miles further a white speck near the long stretch of indented shore marked the little island of Tabarca, rising some 400 feet above the sea-level and crowned by its weird castle, outlined sharply against the clear sky. After nearly eight hours in the saddle, the heat of midday preventing rapid locomotion, the small military station at Tabarca, on rising ground above the town, was reached by a zigzag path, and then, descending the hill on the other side, we drew up at an isolated cottage, dignified by the name of the Hôtel Tiret.

The aspect of Tabarca is not cheering. A few stone houses and a number of wooden shanties half finished, and many of them untenanted, do not give indications of progress or prosperity. But the inhabitants—a mixed assemblage of Europeans of many nationalities and a sprinkling of natives—are hopeful of the future. A concession by the Government of the Bey to an influential

company to work some extensive deposits of iron and copper ore at Ras-er-Rajel, eight miles eastward, will promote the employment of a large number of men. The construction of a harbour and a railway to the mines, now commenced, will open up an increased trade with the interior, and cannot fail to make Tabarca the commercial port for a considerable tract of country.

The remains of the Roman colony of Thabraca, as it was then written, are very insignificant, and consist of the ruined baths near the shore, and masses of walling that bear evidence of subsequent reconstruction. All interest is centred in the ruined castle or citadel, erected by Charles V. on the island after his memorable expedition against Tunis in 1535—a picturesque group of walls and towers, bleached by sun and wind, and perched on the very edge of a precipitous rock rising vertically out of the sea. Under the courteous guidance of the officer in command of the station we made a tour of inspection of this dilapidated citadel, with its great vaulted chambers, successively occupied by the Spaniards, the Genoese, and, till recently, by the soldiers of the Bey. By a concession to the mining company before mentioned, the stones on the island may be employed in the construction of the new harbour works. It is to be hoped that this old castle may still be preserved as the most picturesque object along the whole northern coast of Tunisia.\*

---

\* ‘Bruce visited the island after he had left Africa in 1765, and proposed to the ministry of the day to obtain possession of it as a station for the British trade in the Mediterranean. “The mountains opposite Tabarca,” he says, “are covered with oak-trees of immense size, where, I think, the Mediterranean ports might be easily supplied with timber for construction.”

‘M. Desfontaine, who travelled in Tunis from 1783 to 1786, was

On the morning of March 10th we left our comfortable quarters at Tabarca for Ain-Draham, thirty-one kilomètres direct south, and in the centre of the Khomair country. A road is in course of formation, but it will be some years before it is practicable for carriages. The track followed the banks of the Oued el-Kebir, or River of Oak-trees, the old Eastern boundary of Numidia, and lying in the centre of a broad and beautiful valley about eight miles long. Here the soil is remarkably fertile, and only requires a better system of drainage and improved methods of agriculture to render this locality a centre of great prosperity. At a distance of five kilomètres a ruined building of some pretensions attracted our attention. It appears to have been the dwelling of a rich Roman proprietor, but the absence of inscriptions forbade any clue to its ownership. At eighteen kilomètres we crossed the Oued Kerma, or River of the Fig-tree, a pleasant resting-place, its banks clothed with olive and oak—a spot to charm the eye of poet or painter. Here were several women engaged in washing. Either through fear or natural modesty they removed to a distance, watching our movements with much astonishment, and showing by their gestures that we were not to gratify curiosity by approaching them. The appearance of the inhabitants of this wild country may be expressed in one word—poverty-stricken. Centuries of dogged independence and severance from other tribes, and an occasional raid across the frontier levying black-mail whenever pressed by want,

---

equally desirous that this island should be taken possession of by the Government of France, and expressed his conviction that, were it occupied, France would be able to lay down the law throughout the Mediterranean, and that England would be excluded and lose the Levant trade.'—Lieut.-Col. Sir R. L. Playfair, *Travels in the Footsteps of Bruce*, p. 250.

have made these people as far removed from civilisation as the inhabitants of any country that we should designate as barbarous. The race is stalwart; the men are, as a rule, of tall stature, with features belonging rather to the Moor than to the Arab, the look of the warrior rather than of the agriculturist. Those we met on the track, whether mounted or not, returned our salutations with courtesy, and passed on without the slightest interest in our movements, or even stopping to parley with our guide. Once only in the course of that day we had the slightest cause for anxiety. In riding single file through a wood we suddenly met, at a sharp turn in the track, a mounted Kroumir, armed to the teeth. With wondrous dexterity he spurred his horse into the thick scrub, as though preparing for attack. But a glance at his saddle-bags explained everything. He was the military courier, and was conveying the mails to the camp at Tabarca.

The dwellings of these folk are as squalid as they are themselves, chiefly made of branches of trees, and layers of dried grass daubed over with a little mud. An inventory of the contents is soon taken: a flat bank of earth for a bed, covered by a mat or a few handfuls of straw, some rough earthenware vessels, a wooden bowl or two, a goatskin for churning butter, and a couple of portable millstones, these constitute the ordinary contents of a Khomiri dwelling.

The dress of the men consists of a long shirt reaching to the knees, and a bernous over it, either of dark camel's hair, or white, if they can afford it. A red fez cap with a white turban wound round it constitutes the head-gear. The women's garments are very similar to those of the Bedouin tribes. A large square piece of blue woollen material, neither shaped nor sewn, is wound about the body in a very ingenious way, and tied round

the waist with a cord. It cannot be said to cover the figure, for it is quite loose above the waist, forming a sort of large pocket, in which provisions and other articles are carried when they are on the move. Like the Bedouins also, they enjoy more privileges than their Arab sisters, for their faces are never veiled, and they may be seen talking to the men with European freedom.

At twenty-six kilomètres from Tabarca, still in the midst of beautiful scenery, we reached the Col de Babouch, the junction with the road mentioned before as forming the more direct route between La Calle and Ain-Draham, and where a frontier custom-house has been established. Here the carriage-road is completed, and for the next five kilomètres winds round the mountains to a higher level in the midst of a forest of corks. The magnificence of these trees, fully sixty feet high, with trunks varying from ten to fifteen feet in girth, and lateral branches clothed with moss and sprays of luxuriant ferns, is unsurpassed in North Africa. The trees are barked in the summer months, at intervals of about every ten years, and are a source of considerable revenue to the Government. Turning an angle of the wooded slope, the huts and rough tenements that constitute the newly-built village of Ain-Draham appeared on the hillside, perched high up and apparently inaccessible. The altitude is somewhere about 2600 feet above the sea-level. In a few minutes we dismounted in front of the Hôtel des Pacificateurs, as it is styled, where we found indifferent food and very rough lodging. Ain-Draham is nothing more than a military station established after the subjugation and disarming of the Khomair, and around it are clustered the rough dwellings of small traders, who have been attracted here in the hope of doing business with the officers and men of the French army of occupation.

Through a letter of introduction to the proprietor of the principal store we were able to obtain a carriage and a pair of good horses for continuing the journey. Sending our saddle-horses back to La Calle by the guide, we started early the following morning on an excellent road for Souk-el-Arbäa, in the Medjerdah valley. For many miles the road gradually descended through a forest of cork-trees, followed by an open undulating country, partly covered with heath, and partly under cultivation. A Roman military column, set up in a meadow on the left of the track, six kilomètres from Ain-Draham, marks the course of the old Roman road. An inscription on the shaft, which is about five feet high, fixes the date at about A.D. 320. At a distance of twenty-six kilomètres we drew rein at the rest-house of Fernana,\* where food can be had, but no lodging. This is a bleak spot, commanding an immense sweep of undulating plain, thinly cultivated. It derives its name from a cork oak close by, of gigantic size, the only tree visible for many miles. The girth of the trunk exceeds twenty feet, and the spread of the branches 120 feet. Fifteen kilomètres further on we quitted the main road and entered a track branching off to the left, for the purpose of visiting the ruins of Bulla Regia. In fine weather the track is practicable for carriages, but is not recommended after heavy rains. It is full of ruts, the surface is very uneven, and the coarse

---

\* 'Fernana is on the boundary of the Khomair country, and used to be the extreme limit to which the Bey's camp was permitted to come in its annual circuit for the collection of taxes. Here the chiefs used to meet it, and hand over such sums as they felt disposed to pay. If the Tunisian soldiery advanced a step further the taxes were paid with powder and lead, and these brave warriors never dared to follow their assailants within the limits of their mountains and forests.'—*Consular Report* by Lieut.-Col. Sir R. L. Playfair, July, 1884, p. 6.

herbage that almost conceals it in some places is very obstructive to wheels. It is better, under these circumstances, to go on direct to Souk-el-Arbâa, and to visit the ruins from that station, either on foot or on horseback.

The site of Bulla Regia, now called Beni-Mazeu, covering an area of about a mile in length, was unknown a few years ago. At the present day it is so choked with weeds and coarse grass, and its ruined monuments are so buried under the surface, that identification of the public buildings is no easy task. The walls of the great Thermæ are still partly standing, surrounded by huge masses of stone and rubble, piled up or thrown down in endless confusion. The theatre, built of great blocks of finely-cut limestone, is filled up with earth almost to the top of the auditorium, and the spring, which bears indications of having been embellished with arcades, after the manner of the springs at Zaghouan, is now half-concealed in the long grass. A triumphal arch and other monumental remains, which existed here a few years back, have been wantonly destroyed, and the materials used in the construction of the Tunisian railway, which crosses the plain some four kilomètres distant. What might have been the appearance of this royal city in the days of its prosperity is a matter of pleasant conjecture. Looking down from the higher ground on this assemblage of stones and half-buried remains, the eye can see at a glance that the site was well selected. A large extent of fertile country lay at its feet, and the supply of pure water from the mountains that screened it from the north was abundant and never-failing. It is to be hoped that the site of Bulla Regia may some day be explored.

Regaining the road we crossed the river Medjerdah over a modern bridge, and at 6 p.m., much fatigued by the heat and exertions of the day, reached the buffet

adjoining the railway station at Souk-el-Arbâa. Here we obtained comfortable lodging, and good food and attendance.

Our intention was to dismiss the carriage here and to proceed to El-Kef, forty-six kilomètres, on horseback; but our driver, an Italian, was so anxious to visit some friends there that we were persuaded to continue the journey with him. There is a small mail-cart running daily to El-Kef, but it is a rickety sort of vehicle and not well horsed, and, as the road is only completed for about two thirds the distance, this mode of conveyance is not recommended.

Leaving early the following morning direct south, a sharp trot of nine kilomètres brought us to the banks of the Oued Mellegue, where there is a ferry. The long drought, however, had made the stream quite fordable. Ascending the mountain range forming the southern boundary of the Medjerdah valley, and then traversing a large extent of heathland, partly cultivated and affording good pasturage for numerous flocks of sheep and goats, we drew up at the rest-house of Nebour, a distance of twenty-eight kilomètres. The panoramic view from this elevated region is most extensive, and the scenery picturesque. Below lies the pretty little village of that name, with its white-domed koubbas nestled in olive-groves, and framed by the long range of Numidian mountains. There are two roads from Nebour to El-Kef: the one by the plains, of easy ascent, thirty-eight kilomètres, the other over the mountains, very steep, eighteen kilomètres. Our driver, over-confident of the strength of his animals, chose the latter. With great difficulty they were urged up the sharp ascent, and only succeeded in reaching more level ground after a heavy pull of nearly two hours. Finding they were thoroughly ex-

hausted we alighted and walked on till the walls of El-Kef came in view. The wild grandeur of the scenery at this high altitude is very striking. In so clear an atmosphere the range of vision seems illimitable, and distant objects, that in other climates would not be perceptible, are here outlined with a sharpness that is quite remarkable. A long range of precipitous limestone cliffs, rising in some parts nearly 200 feet, skirts the road for a long distance. Here, at the most prominent angle, the French have established a signal-station for military purposes. After forty-six kilomètres, the road wound round to the right, and the walls of the town and its Kasba came into view. Getting into the carriage again for the sake of appearance, we drove through the upper gate, in a long line of crenelated wall that followed the slope of the mountain, and having satisfied the sentry, we dashed along the narrow tortuous streets to the delight and astonishment of the inhabitants. The less said about accommodation here for European travellers the better. It is sufficient to state that the two houses dignified by the name of Hôtel are both dirty, and their culinary powers of the most limited description.

The town or city of El-Kef,\* signifying the Rock, is of irregular shape, built on the side of a steep rock facing south-west, and enclosed by a loop-holed wall having six gates. It contains a population of about 4000 Arabs and Jews, and a few score of Europeans, mostly Maltese. Like all Arab towns, it is dirty and ill-paved, and except for its situation and some remains of the

---

\* 'It is probable that this town, known as Sicca Veneria, owed its foundation at a remote period to a colony of Phœnicians, who introduced the worship of the Asiatic Venus, worshipped in Assyria, and most probably also in Syria and Phœnicia, under the name of Succoth-Benoth.'—V. GUÉRIN, *Voyage*, II. 57.

older Roman town of Sicca Veneria, with the materials of which it has been built, it has no special interest. El-Kef has six mosques, of poor appearance externally, neither remarkable for grace of outline nor for any of that delicacy of ornamentation so frequently found in Arab work. Of the interiors it is impossible to speak, as entry is forbidden to the infidel. There is an absence of prosperity in the town; many of the houses are unoccupied, and some of them deserted and unroofed. The Kasba, occupying the most prominent position, is built, as in many other Arab towns, in an angle of the enclosing walls, but as it is commanded by a plateau of rock at a higher level it has little value as a citadel. The fragmentary remains of a great temple dedicated to Hercules are built into the walls of an European house, and portions of a basilica or palace in the centre of the town, constructed with huge blocks of masonry, stand out majestically amongst a mass of *débris*, the vaulted apse of one of the chambers, now blackened by smoke, forming the residence of an Arab. The principal advantage at El-Kef is an abundant and never-failing supply of pure water. It comes bubbling up from a spring in the rock that overhangs the town, and rushes into a conduit at the rate of many tons a minute. A monumental fountain erected by the Romans at the end of this conduit is still in fair preservation, and men, women, and children, camels and cattle, may be seen here at nearly all hours of the day, luxuriating in the beneficent flow of cool water, while the waste from the troughs passes down the slope to irrigate and fertilise the plains below. Thirteen great Roman cisterns, side by side, almost as perfect as on the day they were built, were used as storehouses for water in case of drought, but they have long since been disused. At the present

day the French soldiers, occupying some hut-barracks outside the town, use them for gymnastic purposes, and 'Salon de billard' and 'Salle d'escrime,' written on the wall in rough pigments, seem to indicate the purposes to which they are or may be applied.

To those who are interested in epitaphs or inscriptions, whether relating to the Romans, or to the early Christians who formed an important community here in the fourth or fifth centuries, El-Kef must be a treasure-house of instruction. There is scarcely a house which does not possess one or more of these inscribed stones built into the walls, and votive pedestals and tumulary pillars in stone or marble are more numerous here than in any other town of the Regency. In the little burial-ground outside the walls, appropriated to the Jews, the memorial stones consist mostly of Roman altar or votive pedestals laid flat over the graves, coated thickly with whitewash, and the lettering, commencing with the pagan 'D. M. S.', not even erased. Reverence for the dead does not appear to stand very high among these primitive people. The exploration of El-Kef has not yet been conducted in any systematic way, but there is little doubt that valuable remains of the older Roman town, and probably of its Punic predecessor, may some day be brought to light. Three statues of white marble were unearthed less than two years ago near the site of the Temple of Hercules, and many objects of interest to the antiquary are constantly found whenever the surface is disturbed a few feet in depth.

A pleasant breakfast in the patio of the house of M. le Maire, who received us with great courtesy, brought an agreeable visit to a close, and at 2 p.m. on the second day we started on the return journey to Souk-el-Arbäa. Our intention was to have dismissed

the carriage and to proceed in the saddle to Zanford, but the difficulty in obtaining horses for any cross routes, and the absence of reliable information as to distances, made it unadvisable to journey further south. It was as well we did not venture into a part of the country where accommodation was difficult to obtain, for while descending the mountain, the clouds gathered, and a pitiless downpour of rain soon drenched us to the skin. By sheer good luck we managed to cross the Oued Mellegue before the storm-waters had rendered it impassable, and at 8 p.m. we reached the Hôtel buffet at Souk-el-Arbäa.

At 11 a.m. the following morning we left by train for Oued-Meliz, a station twenty-three kilomètres further west, for the purpose of visiting the ancient marble quarries at Chemtou. Leaving our light baggage in charge of the station-master, we started across the heath for a walk of about five kilomètres, forgetful at the moment of the presence of the river Medjerdah, which lay between us and the quarries. This remarkable river, one day almost dry, at another a rushing torrent of water, yellowed by sandy mud, has been already referred to, and its dangers have not been exaggerated. 'Can the gentlemen swim?' said a female voice in Italian at a side-window of the whitened hut that served for a railway-station (evidently the wife of the station-master). 'Oh, yes!' we said. 'You'll get across,' added the husband; 'the waters are not up yet.' The contemplation of the landscape, the beauty of the heather, and the gorgeous colouring of the wild flowers that dotted the plain, drove away all thoughts of the river in front of us. In half an hour we suddenly came to the edge of a steep bank, with the troubled waters below. To strip and pile our clothes on the top of our heads was a matter of unpleasant necessity, but there was

no alternative, except to retrace our steps. By good fortune we reached the opposite bank without mishap, and in half an hour arrived at the cluster of cottages occupied by the workmen engaged in the quarries. Under the courteous guidance of the resident director we made the circuit of the old Roman city that stood here under the name of Simittu Colonia, on the highroad from Carthage to Hippo Regia (Bône). Its situation on the lower slopes of the Djebel Herrech, commanding a magnificent sweep of the fertile Medjerdah plain, was well chosen. A great bridge over the river gave direct communication southward with Sicca Veneria, and another northward through the Kroumir country conveyed to the port of Thabarca, for shipment to Rome, the rich products of its quarries. With the exception of a portion of an aqueduct built with waste marble, and bearing evidences of reconstruction, no single monument is now standing. Trajan's bridge across the Medjerdah, overthrown by an earthquake, is a confused mass of stone and marble, and Roman remains peep out in all directions above the rough scrub that covers the surface. The quarries are much in the condition in which the Romans left them on the irruption of the Vandals in the fifth century. There are great yawning chasms in the mountain side, half-quarried blocks of giallo-antico, and rose-coloured marble, and slabs of breccia, intended perhaps for the embellishment of some temple or palace in Imperial Rome. A concession of these quarries to a Belgian company is likely to be attended with success. There is branch communication by rail with the Tunisian line, and easy transport either to Bône or Tunis.

As there is no accommodation for travellers at Chemtou we were obliged to return to the railway station the same evening. 'How did you arrive here?' we were asked at

the quarries, and, on describing our river experiences, were told on all sides we might have been drowned. To return by the same route was impossible, as the waters, owing to the storm of the previous day, were rising rapidly. However, by following the branch tramway from the quarries to a point on the main line, some three kilomètres lower down the valley, indicated by a white cottage in the far distance, and crossing the river by a railway-bridge, we were enabled to reach Oued-Meliz in time for the evening train to Souk-Ahras on the Algerian side of the frontier.

## CHAPTER XXVIII.

### DOMESTIC LIFE.

DIFFICULTY OF OBTAINING INFORMATION CONCERNING DOMESTIC LIFE IN TUNISIA—WOMEN CLASSED UNDER THREE HEADS: MOORS, BEDOUINS, AND JEWESSES—MOORISH FEMALES SELDOM MET IN THE STREETS—THE YOUNGER ONES KEPT STRICTLY WITHIN DOORS—THEIR FACES ARE ALWAYS HIDDEN—HEAD-GEAR—POLYGAMY ON THE DECLINE—VISIT TO THE INTERIOR OF A HOUSE IN TUNIS—THE MYSTERIOUS SHEET—INMATES OF THE HAREM—PUNISHMENT OF THE CORSET—BEDOUINS DO NOT CONCEAL THEIR FACES—THEIR APPEARANCE, GARMENTS, AND JEWELRY—FALSE HAIR—JEWESSES SEEN ONLY IN TOWNS—THEIR CORPULENCE ARTIFICIALLY ENCOURAGED—THEIR BEAUTY—JEWISH HOSPITALITY—LAX MORALITY.

**T**HE pertinacity with which dwelling-houses are closed against Europeans, and the jealousy with which strangers are regarded, are a bar to any intimate acquaintance with the domestic life of the people. It is, therefore, a difficult task for those whose residence in the country has been of short duration to contribute anything of value on the subject of harem life. It would, however, be a grave omission in a work on Tunisia not to make any mention of the social life of the female population, which, especially in the towns, has been less affected by European influences than in any other Mohammedan centre.

It is not within the scope of these notes to discuss the vexed question of polygamy, or to inquire whether the condition of the inmates of a harem is preferable or

not to the lot of women of more civilised countries—the former relieved of all care and responsibility so long as they obey one master ; the latter burdened with the vagaries of fashion, the cares and exactions of the household, the consequences of excessive education, or, in the case of the less fortunate, subject to the thralldom of domestic service with the risk of capricious dismissal, to be followed by the almshouse or union when they can work no longer.

The women of Tunisia may be roughly classed under three heads : the townswoman, generally of Moorish extraction ; the Bedouin nomad ; and the Jewess. Moorish women, especially of the higher class, are rarely seen in the streets, although a few may be found passing through the bazaars before noon. In this respect there is a marked difference between Tunis and other great Mohammedan capitals like Constantinople or Cairo, where women of the higher grades enjoy a greater amount of personal liberty, and, consequently, are far more numerous in the public thoroughfares. As their faces are invariably hidden and the outlines of their forms enveloped in the folds of their garments, it is difficult to arrive at an opinion as to their ages, especially as there is an absence of elasticity in their movements. It would seem, however, that the privilege of walking abroad, either to make purchases or to go to the bath, is confined to those who are past middle age, and that the younger women are kept at home. The covering of the face differs from that used in Turkey or Egypt, and consists of two bands of black plaited horsehair, or white material (generally the former), bound horizontally across the face, and leaving the eyes only uncovered. Sometimes the black yashmak, as it is called, mostly of silk and richly embroidered, such as is worn by the

higher grades, constitutes a veil as well as a mantle. Both modes of head-gear are exceedingly ungraceful, and appear to have been designed to render their wearers as repulsive as possible. Harems containing many women are not so frequent in Tunisia as formerly, most likely from reasons of economy. Men of position content themselves with one, or at most two, wives, and those of the lower orders are invariably the husbands of one only. For information concerning the inner life of a harem, one must be beholden to European ladies.\* Admission is never granted to men, nor would it be discreet to question an Arab about his domestic arrangements; any inquiries after a man's wife and family, so usual with us, would be regarded by him as a gross impertinence. Only once, however, were we able to inspect a house in Tunis occupied by a Mohammedan and his family, accompanied by a friend who contemplated purchasing the house, and who had announced his visit beforehand. We passed through the vestibule into the patio, where the proprietor received us. Room after room was entered without a glimpse of a female form. At length, in the corner of one of the dimly-lighted apartments we perceived a large sheet, concealing something which appeared to move. Directing our gaze in an opposite direction but still mindful of the sheet, we turned suddenly round, and saw, as we anticipated, bright eyes peering at us from underneath the folds.

---

\* An interesting chapter upon Tunisian domestic life and the habits of the women will be found in *La Côte barbaresque*, by Le Prince J. Lubomirski, together with the narrative of a visit made by the Princess Lubomirski to the Beya at the harem of the Bardo. The same account is given, translated, but without any recognition of authorship, by Herr von Hesse-Wartegg, in chap. viii. of his work on *Tunis*.

---

The wary Arab had hit upon this simple expedient for the temporary concealment of the female portion of his household.

In conversation with a French lady resident in Tunis, who had just visited one or two harems of that city, we learnt that the inmates are as a rule plain, ignorant, and trivial. What most interested them was her own dress, and they persisted in divesting her of her garments one after another, and examining the lines of stitching with eager curiosity. When they came to the corset, one of them exclaimed, 'You must be a very wicked woman!' and then begged to know how she could have offended her husband to such a degree that he should have inflicted upon her so severe a punishment.\*

The Bedouin women, seen only in the interior of the country, do not cover their faces, but seem proud of their red skins, face, neck, and chest tattooed with all sorts of quaint devices. Their countenances are expressive of intelligence, if not of beauty, and their sprightly movements and quick steps indicate that nomadic life, in spite of much drudgery, is more enviable than the monotonous unvarying lot of their Arab sisters in the towns. They affect garments of bright colours, and wear a profusion of silver jewelry (the investment of their earnings), to be valued rather by weight of metal than by delicacy of workmanship. Amongst the profusion of chains, fibulæ, and bangles, one is sure to notice some one or more pendent talismans, believed to be charms

---

\* In a letter to Lady Rich, dated Adrianople, April (o.s.), 1717, Lady Mary Wortley Montagu describes a visit to the Bagnio, and showing her stays; she adds that the inmates 'believed I was locked up in that machine, and that it was not in my power to open it; which contrivance they attributed to my husband.'

against the evil eye. In some districts they cover their heads with false hair, arranged in small ringlets. These nomads are by no means shy, and do not object to approach a stranger, subject to the permission of their men, or when they feel certain of not being detected. Unlike his co-religionist of the towns, the Bedouin has several wives, which to him become a source of gain, as they supply him with cheap labour.\*

Jewesses are seldom met with in the country, but in the principal towns form a conspicuous as well as an interesting portion of the population. In the account of our visit to Sfax we made special note of their curious and picturesque appearance. Young or old, they are nearly always fat—to an extent indeed which would be deemed incredible by one who has not seen them; and as obesity is in the eyes of their relations and admirers their chief attraction, art is employed to assist nature in augmenting the volume of their charms.† They hide neither face nor form, for their tightly fitting

---

\* We had been told that the greatest compliment an European could pay to a Bedouin parent was to spit deliberately into the faces of any of his children. Many travellers have noted the incredible value of spittle, as recorded in Biblical times. We need scarcely say that when an opportune moment arrived for testing the value of the recipe we shrank from the experiment.

† This strange practice is not confined to the Israelites, but prevails also among the Mohammedans. Macgill (*Account of Tunis*, 1816, p. 90) thus describes the process: 'The Tunisines have a curious custom of fattening up their young ladies for marriage. A girl, after she is betrothed, is cooped up in a small room. Shackles of silver and gold are put upon her ankles and wrists as a piece of dress. If she is to be married to a man who has discharged, dispatched, or lost a former wife, the shackles which the former wife wore are put upon the new bride's limbs, and she is fed until they are filled up to the proper thickness. This is sometimes no easy matter, particularly if the former wife was fat and the present should be of a slender form. The food used for

garments permit an exact estimate of the outlines of their persons. In youth they are frequently of great beauty—big, lustrous eyes, finely cut features, delicate, transparent skins, and, due allowance made for the bulkiness of their forms, well-proportioned and well-formed limbs. Unlike the dwellings of Mohammedans, the Israelitish houses are not closed to strangers; on the contrary, the proprietors, on the occasion of a marriage\* or other family festivity, are given to hospitality, and extend a cordial welcome to the stranger, even though his visit be one of mere curiosity. The men appear to be devoid of that jealousy which with the Mohammedan amounts to fanaticism, and in the lower ranks of life permit their women to pursue, with impunity, a calling which is considered by Europeans as the lowest step of the social ladder.† The evil is not confined to the Jewish portion of the population, but is equally practised by the followers of Mohammed—in their case, however, to the entire exclusion of Europeans.‡

---

this custom, worthy of barbarians, is a seed called *drough*, which is of an extraordinary fattening quality, and also famous for rendering the milk of nurses rich and abundant. With this seed and their national dish, "*cuscusu*," the bride is literally crammed, and many actually die under the spoon.' This account is endorsed by both M. Léon Michel and Herr von Hesse-Wartegg, who further affirm that the girls are shut up in dark, damp places, and that such delicacies as the flesh of young dogs and horse-livers are added to their diet.

\* The proceedings have been so frequently described that we hesitate to offer any account of our own, preferring to refer our readers to the pages of Herr von Hesse-Wartegg, M. Léon Michel, and others.

† Those desirous of pursuing the subject will be able to satisfy their curiosity in *Les Français à Tunis*, Pierre Giffard, p. 128.

‡ Consult, *inter alia*, *La Côte barbaresque*, par Le Prince J. Lubomirski, p. 68.

## CHAPTER XXIX.

### CONCLUSION.

ADIEU TO OUR FRIENDS — FRENCH AND ARAB COURTS OF JUSTICE —  
NOAH'S ARK — DEARTH OF LITERATURE IN TUNIS — A SHAKSPEARIAN  
READING — DEPARTURE.

**T**HE couple of days which remained before our return to England by the next steamer from the port of Tunis, was pleasantly occupied in a round of visits to those whose acquaintance we had the good fortune to make on previous occasions, and who had rendered us much courteous assistance.

A visit to the Gouletta, under the friendly guidance of Mr. S. R. Pariente, an old and respected resident in Tunis, who placed a carriage at our disposal, took up the best part of a day. Although the port bearing that name has an important bearing on the history of North Africa, having been several times captured, destroyed, and rebuilt, it demands no lengthened description. As the commercial harbour of Tunis, separated from the city by El-Bahira, or the lake of Tunis (mentioned in the first chapter), it is essentially a busy place; its inhabitants, half Oriental half European, being of that nondescript character peculiar to other maritime towns of the East. The narrow channel, the Gouletta proper (a corruption of the Arabic words, Halk-el-Oued, or Throat of the Canal), that links the Mediterranean with the lake, is an

artificial cut of great antiquity, having been in existence as far back as the brightest epoch of Carthaginian rule. Of the buildings that constitute the town on either bank of the canal little need be said. They owe their origin to ruined Carthage, and if stones could speak another chapter might be added to the sad tale of the last Punic war. The summer palace of the Bey on the sea-shore, with its luxuriant gardens—a tangled undergrowth of tropical plants—has long since been deserted. The villas of wealthy Tunisians who resort here during the summer months are simple and unpretentious, and the shops and cafés that line the main street are mostly one storey high, mean, and unpicturesque.

An agreeable morning and a *déjeuner* with M. Lemarchand, one of the judges of the French Court recently established in Tunis, was followed by a visit to the Court, where justice was administered in conformity with French law. One might, as far as appearances went, have been in France; the judges and pleaders in their robes and *toques*, speaking pure Parisian dialect, and the assistants, with few exceptions, European. Two years previously we had paid a similar visit to the Court of justice here, that of the Cadi, where Arab laws prevailed and Arab customs were observed. The Court, on that occasion, had just opened, and the Cadi's richly - caparisoned and well - kept mule was standing in the open street, tethered and unattended. Passing through the gateway, and into a spacious patio, where some thirty or more natives were congregated, awaiting their turn, we reached a small door, giving access to a chamber, scarcely twelve feet square. Here, on a cushioned bench, occupying one side of the apartment, was seated, cross-legged, the Cadi, a man of some sixty years, whose benevolent countenance displayed in-

telligence and the habit of command. In front of him, their knees almost touching his couch, sat the persons whose case he was considering—plaintiff and defendant—both on the same seat, elbow to elbow. A minute or two sufficed to decide each case, and the disputants left the court, apparently satisfied with the judgment so hastily pronounced. A running clerk, attached to the court, delivered the judgment to the registrar, whose office was on the other side of the patio.

As we were leaving the court, the usher or secretary, a man of some seventy years, who had been noting the Cadi's judgments, followed us. 'Were the strangers Englishmen?' he demanded of our interpreter. 'And, if so, could he ask them a question?' On receiving an affirmative reply, his serious, unanimated countenance brightened, and after a pause he said: 'I know well how powerful the English are on the sea, and I have heard that they have discovered Noah's ark. Is it true?' The question fairly took us aback, and great was the inclination to laugh; but stifling our hilarity, which would have wounded the old man's feelings (for he spoke with earnestness), we replied, with as much seriousness as we could assume, that his estimate of British naval prowess was as correct as it was flattering, but, so far as we knew, Noah's ark had not yet been found.

There is probably no Eastern country, equally conspicuous for its long history, as well as for its commercial importance, where every branch of literature has been less encouraged than in this corner of North Africa. Under the sway of the Roman Empire, and during the many centuries of Arab occupation, no great work of literature has ever issued from this old-world city. Setting aside the notes by travellers of all nations

during the last century, the history of literature in Tunis may be recorded as blank. It is true that the Sheik Nefzaoui, who flourished in the sixteenth century, made it his home, and probably wrote within its walls that very remarkable work on the social and domestic manners of his countrymen, which has lately been introduced to the curious of both Paris and London. And we may also note that John Howard Payne, author of 'Home, sweet Home,' died at Tunis, April 10th, 1852. The United States Government has erected a monument over his remains in the cemetery of St. George, and the Protestant church is embellished with a memorial window.

With this dearth of literature in a country where bookstalls are unknown, and books at a discount, it was an agreeable surprise to receive an invitation for the last evening of our stay in Tunis to a Shakspearian reading at the British Consulate. The other guests were for the most part members or friends of the diplomatic body. Among the readers (audience there was none) the Italian Consul was conspicuous, and some young ladies from the German Consulate also took parts. This pleasant evening, one of many passed under the hospitable roof of our esteemed Consul, seemed to assure us that, however much the political influence of Great Britain has been allowed of late to decline in these parts, her literary influence is as strong as ever.

To the expression of gratitude to Mr. T. B. Sandwith, C.B., whose kindness and attention contributed so largely to the pleasure and profit of our journey, we would add our thanks to Messieurs Carbonaro, father and son, for numerous valuable services unsparingly rendered.

The 5th of December, the day fixed for our departure, had arrived. Our good friend, Mr. S. R. Pariente,

whose attentions had been unceasing, accompanied us to Gouletta, where we spent a pleasant hour in his villa by the seashore, and at 5 p.m. embarked in the *Ville de Rome* for Marseilles.

As the Tunisian shores receded from our view, and our thoughts reverted to the home we were now so rapidly approaching, its comforts contrasted with the rough food and rougher lodging of the past few weeks, and we were constrained to acknowledge the vein of truth pervading the words of Touchstone, which we had read on the previous evening: 'Ay, now am I in Arden: the more fool I; when I was at home, I was in a better place: but travellers must be content.'

## GLOSSARY OF ARABIC TERMS & WORDS USED IN THE BOOK.

- Abd* (âbd), a slave.
- Ain* (âin), a spring or fountain ; lit. an eye ; plur. *âyin*.
- Arba* (arbaâ), four. Ex. *Souk-el-arbaâ*, the market of the fourth day of the week, *i.e.*, Wednesday.
- Arbâl* (arbal), a quarter or district of a town or suburb. Sp. *Arrabal*.
- Areg*, sand-hills.
- Attar* (âtâtâr), perfume. Ex. *Souk-el-âtтарin*, market of the perfumers.
- Bab*, a gate or doorway ; plur. *Bibân*.  
Ex. *Jâmi ath-thalatha-bibân*, the mosque of the three gates.
- Bahra* (bahrah), a plain or flat surface.
- Bahr* (bahr), the sea.
- Bahira* (buheyrah), a little sea, a lake, Sp. *Albufera*, *albuhera*.
- Bakha*, generally el-Batchah, equivalent to Sp. *patio*, signifying an uncovered space in the centre of a house.
- Baracan* (barakan), a cloak or covering, generally of camel's hair, of the same form as the vestment worn by our Saviour. Sp. *Barragan*.
- Beit* (beyt), a hall, a reception-room. Ex. *Beit-el-Belâur*, or the hall of glass in the Bardo palace.
- Ben* (ebn, ibn), son ; plur. *beni*.
- Bernous* (bornús), a large mantle or shawl in one piece, with a hood. Sp. *Albornos*.
- Bey*, a governor-general, owing allegiance to the Sultan.
- Bindir* (bender), a sort of drum or timbrel. Sp. *Pandero*.
- Bir*, a well.
- Bordj* (borj), a castle or fortified structure. Sp. *Borje*.
- Bou* (bú, for abú or abí), a father.
- Chachia* (shashia), a red skull-cap.
- Chott* (shott), a salt-lake.
- Couscous*, *Couscousu* (kuskusú). Sp. *Alcuzcuz*, a farinaceous food.
- Dar*, a stone-built house.
- Dey*, a supreme ruler.
- Djamaâ* (Jamâ), a mosque. Sp. *Aljama*, *aljamia*.
- Djebba* (jebba, jubba), a kind of petticoat worn by women, also a vest for men.
- Djubba*, a vest ; whence Sp. *Aljuba*, *jubon*, *chupa*. Fr. *Jupon*.
- Djebel* (jebel), a mountain. *Djebeli* (jebeli), mountainous.
- Djerid* (jerid), the dry country, the desert.
- Dib* (dhfb), a jackal. Sp. *Adive*.
- Diffa* (dhayffah, dheyffah), a repast prepared for guests. Sp. *Daija*. Eng. *Tiffin* (?).
- Dirba* (diriba), a wigwam, or enclosure formed with bamboo and palm branches.
- Douar* (dowar), plur. of *dâr*, a group of Arab tents or families representing a tribe ; also round. Ex. *Hisnad-dowâr*, the 'round tower.'
- El* (al), the, being the article prefixed to all nouns, sing. or plur.

- Fondouk* (fondak), an inn, a caravan-sary. Sp. *Alhondiga*.
- Gandoura* (ghandora), a large robe, covering the limbs down to the ankle. Sp. *Alcandora*.
- Gimbrik*, a native stringed instrument.
- Gourbi* (gurbí), a native tent.
- Guera*, a pond.
- Hadar* (hadhrí), an Arab living in a town; the counterpart of *Beydawi*, a Bedouin.
- Hajd* (hajji), one who has made a pilgrimage to Mecca.
- Haik* (haik), a piece of thin material, about a yard wide and four yards long, going round the body, and covering the *chachia*, or skull-cap, the whole being secured round the head by a camel's-hair rope. Sp. *Haique*.
- Hammám* (hammah; plur. hammám), hot spring or bath. Ex. *Hammam-el-enf*, the bath of the nose, from the outline of the adjoining hill resembling that organ. Sp. *Alhama*, hot bath.
- Hasheesh* (hashishah). Sp. *Alexixa*.
- Hegira*, *Hadjira* (higra), the flight of Moammad from Mecca to Medina, from which the Mohammedans begin their calendar.
- Henchir*, ruins or remains of antiquity.
- Hout* (hut), a fish. Ex. *Guera-el-hout*, the fish-pond.
- Imám*, a leader.
- Jehád*, the holy war against the infidel.
- Kadi* (kádhi), a judge. Sp. *Alcaide*.
- Kaid*, a chief, the governor of a castle, a captain. Sp. *Alcaide*.
- Kantara*, a bridge on arches. Sp. *Alcantara*, *Altantarilla*.
- Kasba*, *Kaşbah*, *Kaşaba*, a citadel. Sp. *Alcazaba*.
- Kasr* (kaşr), a fortress, or fortified palace. Sp. *Alcazar*.
- Kasserin*, the two fortresses.
- Kebír*, great.
- Kelb*, a dog.
- Kindja* (Kamija), an undergarment. Sp. *Camisa*. Fr. *Chemise*.
- Kibleh* (kiblah), the shrine of a mosque looking to Mecca. Sp. *Alquibla*.
- Kot* (koçu), cotton. Sp. *Algodon*.
- Koubba* (kubba), a dome; the tomb of a marabout or Mohammedan saint, invariably surmounted by a cubba, or cupola; also a bed recess. Sp. *Alcoba*. Fr. *Alcôve*. Eng. *Alcove*.
- Legma* (lehma), the sap of the palm-tree, an intoxicating liquor.
- Medrassen* (midrasa, madrisa), a school, college, or university.
- Maksoura* (makşúrah), a vestiary or vestry in a mosque.
- Mansoura* (mansúrah), the city of the victorious or conqueror.
- Marabout* (marbút), a man who devotes his life to contemplation and religious exercises.
- Melah* (melaḥ), salt. Ex. *Chott-el-Melah*, the salt-lake.
- Membar* (mimbar), the pulpit in a mosque. Sp. *Almimbar*.
- Mersa*, *Marsa*, a port, an anchorage. Ex. *Marsa-el-quibir*, the great or capacious port. Sp. *Maçarquivir*.
- Mihrab*, the niche or recess in a mosque indicating the position of the kibleh.
- Minar*, a tower attached to a mosque. The Moors call such towers *şómah*. Sp. *Minarete*.
- Mesdjid* (mesjid), a mosque, a house of prayer, from *sajada*, to prostrate oneself. Sp. *Mezquita*.
- Moghreb* (magrib), the west, the sunset. Sp. *Almagreb*.
- Mokaddem* (maçaddam), a head man, a chief, or captain. Sp. *Almocaden*.
- Muezzin* (muedden), attendant at a mosque, who calls the faithful to prayer. Sp. *Almuedano*.
- Mufti*, a spiritual governor, a bishop exercising magisterial functions.
- Oued* (wad, or wadi), a watercourse, a river; also a valley traversed by a river. Sp. *Guada*. Ex. *Guadal-*

- quivir*, the great river; *Guaroman*, the river of the pomegranates; *Guarrazas*, the river of lead; *Guadarama*, the sandy river, &c.
- Oulad* (ulad), sons; plur. of *wald*, son. It is often used as the equivalent of *Benu* or *Beni*, to designate a tribe or family. Ex. *Beni Menú*, *Beni Idris*, *Beni Ummmayah*, &c.
- Oust*, middle, applied to the central court, or *patio*, in the middle of a Moorish house.
- Ras*, a head, a cape or promontory. Sp. *Rés*.
- Resás* (raşás), lead. Ex. *Djebel Resás*, the mountain of lead; *Guada Resás*, the river of lead.
- Roumi* (Rumf), literally a Roman, but generally used by Arabs throughout the East to designate strangers of Christian origin. Ex. the great sepulchre of the Mauritanian kings west of Algiers, known as the *Tombeau de la Chrétienne*, is in Arabic *Kabr-er-Roumia* (masc. *Roumi*, fem. *Roumia*).
- Sabbat*, shoes. Sp. *Zapatos*. Fr. *Sabot* and *Savate*.
- Sahel* (saħl), the coast.
- Sahib*, *Saib* (sáħib), a companion, a friend, a master or lord, the author of a book.
- Sebkha*, a salt lake or a marsh.
- Sebb* (Sebâ), the seventh day, *i.e.*, Saturday.
- Scherif* (sharif, sherif), a supposed descendant of the Prophet, conspicuous by wearing a green turban. Sp. *Xarife*.
- Sheikh* (shekh), the chief of a tribe. Sp. *Xequé*.
- Sid*, lord. *Sidl*, my lord. Sp. *Cid* and *Cidan*.
- Silos* (sfl), subterraneous granaries for corn. Sp. *Silo*.
- Skiffa*, the vestibule of a Moorish house. Sp. *Acequife*.
- Smala*, a fortified camp occupied by Spahis; also an army.
- Sof*, a league or brotherhood bound by the same laws, hence the *Sufts*.
- Souk* (súk), a market. Sp. *Zoco*.
- Sura*, a chapter of the Koran. Sp. *Azora*.
- Zab*, an oasis watered by a river.
- Zaouia*, a college or place of refuge for poor scholars or religious mendicants.
- Zeituna*, an olive-tree. Sp. *Azeituno*, the fruit itself being *Azeituna*.

As French scholars in Oriental languages have not yet fixed on any one of the various systems of orthography used in Europe, the different Arabic names in brackets have been written in accordance with the rules established by the Asiatic Society of Great Britain. Some of the letters, however, must be distinguished by points or dots, â ħ ş ŧ, if their full value is to be given. To those words which have left their mark on European languages (chiefly Spanish) we have added their derivatives, in the hope that this may be found useful to Europeans not thoroughly acquainted with Arabic.

## *Introductory Note to Bibliography.*

---

**T**HE following Bibliography comprises:—(1), Books on Carthage and Utica, with their history and archæology; (2), Books on Tunisia, or on towns or separate districts of that country; (3), Books partly on Tunisia; (4), Books on the Barbary States (when Tunisia is included) and their piracies; (5), Articles in Societies' Transactions, Collections of Travels, Encyclopædias, Magazines, and other periodicals; (6), Dictionaries and Manuals of Conversation in the Arab language; (7), A few books not specially on Tunisia, but illustrating indirectly the religion, customs, antiquities, or language, ancient or modern, of that country; (8), Some works of the imagination.

The Bibliography is neither descriptive nor critical; *i.e.*, we have not attempted to follow the books noted through their several editions, to indicate their typographical or iconographical peculiarities, or even to analyse their contents; occasionally, however, we have appended a short note to an important or specially useful work. Our object has been to offer, in as concise and portable a form as possible, a list of the principal authorities on the subject.

For the works which have not passed through our hands we are indebted to the following publications:—

*Bibliographie carthaginoise, par E. de Sainte Marie*, Paris, Jourdan, 1875. 8vo. The same appears in 'Recueil des Notices et Mémoires de la Société archéologique du Département de Constantine,' xvii., 69-110. Severely noticed in 'Litterarisches Centralblatt,' May 20, 1876. M. de Sainte Marie was Premier Dragoman du Consulat de France à Tunis.

*Essai de Bibliographie tunisienne, ou Indication des principaux ouvrages publiés en France sur la Régence de Tunis, par A. Demarsy*, Paris, 1869. 8vo.

*Bibliothèque asiatique et africaine, ou catalogue des ouvrages relatifs à l'Asie et à l'Afrique qui ont paru depuis la découverte de l'imprimerie jusqu'en 1700, par H. Ternaux-Compans, Paris, 1841. 8vo.*

*Bibliographie des Ouvrages relatifs à l'Afrique et à l'Arabie. Catalogue méthodique de tous les ouvrages français et des principaux en langues étrangères traitant de la géographie, de l'histoire, du commerce, des lettres, et des arts de l'Afrique et de l'Arabie, par Jean Gay, San Remo, chez J. Gay & fils; Paris, chez Maisonneuve & Cie. 1875.\* 8vo., pp. xi. and 312, double cols.*

*Bibliographie d'Ouvrages ayant trait à l'Afrique en général dans ses rapports avec l'exploration & la civilisation de ces contrées depuis le commencement de l'Imprimerie jusqu'à nos jours, précédé d'un indicateur par Gabriel Kayser, Propriété de l'Auteur, Bruxelles, 1887. 8vo., pp. xv., 176.*

*A Bibliography of Algeria, from the Expedition of Charles V. in 1541 to 1886, by Sir R. Lambert Playfair, K.C.M.G., H.M. Consul-General for Algeria and Tunis, &c. (Published by the Royal Geographical Society of London.)*

*Bibliotheca Geographica. Verzeichniss der seit der Mitte des vorigen Jahrhunderts bis zu Ende des Jahres 1856 in Deutschland erschienenen Werke über Geographie und Reisen mit Einschluss der Landkarten, Pläne und Ansichten. Herausgeben von Wilhelm Engelmann. Mit einem ausführlichen Sach-Register. Leipzig, W. Engelmann, 1858. 8vo., pp. vi. and 1225. A most useful and carefully executed compilation.*

*Classified Catalogue of the Library of the Royal Geographical Society, to December 1870, London, John Murray, 1871. 8vo.*

*Bibliotheca Britannica; or, a General Index to British and Foreign Literature. By Robert Watt, M.D. Edinburgh, A. Constable & Co.; London, Longman & Co., 1824. 4 vols.*

*Catalogue général de la Librairie française pendant 25 ans (1840-1865) rédigé par Otto Lorenz, Paris, O. Lorenz, 1867-1880. 8vo., 8 vols.*

*Index to the British Catalogue of Books published during the years 1837 to 1857 inclusive. Compiled by Sampson Low, London, Sampson Low & Co., 1858. Vol. ii., 1856 to Jan. 1876; vol. iii., Jan. 1874 to Dec. 1880.*

---

\* Gay's compilation being based upon: *Bibliographie de la France, journal général de l'imprimerie et de la librairie; Bibliographie des Ouvrages relatifs à l'Amour, aux Femmes, &c.; Catalogue des Accroissements de la Bibliothèque Royale, Bruxelles, 1843; Catalogue des Livres de la Bibliothèque de Grenoble; Catalogue de M. le Duc de la Vallière, Paris, 1783; Nouveau Dictionnaire historique portatif, &c., par une Société de Gens de Lettres, Amsterdam, 1771; Polybiblion; and the works of MM. Barbier, Bouillet, Bourquelot, Brunet, Eug. Hatin, Peignot, Quérard, Van Hulthem, Vapereau and Walckenaer; those authorities have not been again consulted.*

*A Subject Index to the Modern Works added to the Library of the British Museum in the years 1880-1885.* Compiled by G. K. Fortescue, Superintendent of the Reading-room, British Museum. Printed by Order of the Trustees, &c., London, 1886.

*An Index to Periodical Literature by W. F. Poole, LL.D. Third Edition.* Boston, J. R. Osgood & Co.; London, Trübner & Co., 1882. Large 8vo., pp. 1442.

*Notes and Queries*, London.

*L'Intermédiaire des Chercheurs et Curieux*, Paris.

*Le Livre, revue du monde littéraire*, Paris, Quantin.

And the excellent trade catalogues of M. Challamel aîné, and of M. A. Barbier, of Paris.

The arrangement is alphabetical, by authors' names; \* publications, however, of which we have been unable to ascertain the authorship, will be found under the heading *Anonymous*, and these we have, in order to facilitate reference, subdivided, and arranged, as far as was practicable, chronologically.

We would indicate the following twenty works as sufficient for the purpose of the traveller:—

A. M. BROADLEY: *The Last Punic War* (p. 222, *post*).—A. DAUX: *Recherches sur l'origine et l'emplacement des emporia phéniciens* (p. 229).—Dr. N. DAVIS: *Carthage and her Remains* (p. 229).—DUREAU DE LA MALLE: *Recherches sur la Topographie de Carthage* (p. 232).—EL-BEKRI:

---

\* We have experienced some difficulty in placing correctly and consistently the Arab writers: firstly, because their name system differs so widely from ours; and secondly, by reason of their names having been imported into European languages, with spellings dictated by the nationality or caprice of the translators or compilers. To offer a single example: A man known as *John, son of James, father of George, the Londoner, inhabitant of Manchester*, would evidently suggest difficulties as to his proper alphabetical position; when now *John* is suppressed, and the individual is known as the *son of James*, or as the *father of George*, or as the *Londoner* simply, the difficulty is augmented. Further, the prefixes *al* or *el*, *ebn* or *ibn*, are written either way indiscriminately, and the same sound in a name will be rendered by a *c*, a *g*, or a *k*, as the translator may think fit. We have been constrained, then, to copy the names as they are given in the books we have noted, and to adopt the arrangement introduced by our predecessors; in our alphabetical headings, however, we have invariably employed one and the same spelling for the same prefix, e.g., *el* not *al*, *ibn* not *ebn*, so that the Arab writers cited will generally appear under those prefixes, as *El-Bekri*, *El-Edrisi*, *Ibn-Haukal*, *Ibn-Khaldoun*, &c.

*Description de l'Afrique* (p. 233).—EL-EDRISI: *Commentatio de Geographia Africae* (p. 233).—V. GUÉRIN: *Voyage archéologique* (p. 239).—Comte D'HÉRISSON: *Relation d'une mission archéologique en Tunisie* (p. 242).—E. VON HESSE-WARTEGG: *Tunis: Land und Leute* (p. 242).—IBN-KHALDOUN: *Histoire de l'Afrique* (p. 243).—LEO AFRICANUS: *Totius Africae Descriptionis* (p. 248).—MARMOL: *Description de Africa* (p. 252).—E. PELLISSIER: *Description de la Régence de Tunis* (p. 256).—PEYSSONNEL et DESFONTAINES: *Voyages dans les Régences de Tunis et d'Alger* (p. 257).—Sir R. L. PLAYFAIR: *Travels in the Footsteps of Bruce* (p. 257).—Abbé POIRET: *Voyage en Barbarie* (p. 258).—Baron ALPHONSE ROUSSEAU: *Annales tunisiennes* (p. 264).—Dr. THOS. SHAW: *Travels* (p. 268).—R. BOSWORTH SMITH: *Carthage and the Carthaginians* (p. 269).—Sir GRENVILLE TEMPLE: *Excursions in the Mediterranean* (p. 271).

## BIBLIOGRAPHY.

- ABELUS, Mgr. : *Vie de St. Vincent de Paul*, Paris, 1839. 8vo. St. Vincent de Paul was enslaved at Tunis in 1667. Consult also : *Lettres de Saint Vincent de Paul*, Paris, 1880. 4 vols., 8vo.
- ABU SA'ID, Capitaine: *Le Marabout de Sidi-Fat-Allah, Episode de l'Insurrection tunisienne en 1881*, Paris, 1884. 12mo., pp. 278.
- ADANSON. See DOUMET-ADANSON.
- ADDISON, JOSEPH : *Cato; a Tragedy*. The scene is a large hall in the Governor's palace at Utica. See also DAMPMARTIN.
- (AGUILAR, El Alférez PEDRO DE): *Memorias del Cautivo en La Goleta de Túnez, del Original en poder de Tyssen Amhurst, Esq<sup>o</sup>, de Didlington Hall, Norfolk. Publicolo La Sociedad de Bibliófilos Españoles*, Madrid, 1875. 8vo., pp. xx. and 314. 'We have here,' writes Señor Pascual de Gayángos in the Introduction, 'an original and extremely curious book, in which a Spanish soldier, a captive in Barbary and Constantinople, relates with simplicity and in prose mixed with verse the events, now prosperous now adverse, of which he was witness; his own adventures of love and fortune, his campaigns against the Moors of Alpujarras, and, finally, the loss of the Goleta of Tunis, from which he dates the loss of his own liberty.' The volume contains, *inter alia*, the description and origin of Tunis; an account of the island of Estaño, or Estanque, three miles distant from Tunis; poems on the loss of the Goleta, of the fort of Tunis, and of the island of Estaño; and *Relacion de Don Joan Zanoquera hecha á el Señor Don Joan* (of Austria) *del Suceso de La Goleta y Fuerte de Túnez y Isla del Estaño*. Although the original MS. has neither title nor name of author, Señor Gayángos does not hesitate to attribute it to Pedro de Aguilar, the friend mentioned by Cervantes in his *Novela del Cautivo*.
- AGUILERA : *Chronica y Recopilacion de varios Sucesos de Guerra que han acontecido en Italia y paites de Levante y Berberia, desde que el Turco Selin rumpio con Venecianos, Çaragoça, 1579*. 4to.
- AILLY, Baron D' : *Sur une Médaille inédite de Leptis*, art. in 'Revue Numismatique Française,' série I, vi., 349.
- ALIX : *Le Dromadaire tunisien*, art. in 'Science et Nature,' Oct. 3, 1885.
- ALLEMAND-LAVIGERIE, C. M. See LAVIGERIE.
- AMARI, M. : *I Diplomatici arabi del reale archivio fiorentino*, Firenze, Lemonnier, 1863. 4to. A work to be consulted, says M. A. Demarsy, on the history of Tunisian diplomacy.
- AMBERT, Général : *Tunis et Carthage*, art. in 'Univers,' August 25, 1881.
- AMEILHON, H. P. : *Mémoire sur une Inscription sur une plaque de cuivre trouvée à Tunis*, art. in 'Mémoires de l'Académie des Inscriptions,' 1789, xlix., 501.
- ANDRÉ, M., Conseiller à la Cour d'Appel d'Alger : *Album africain, recueil de cartes, plans, vues, gravures, lithographies, dessins, aquarelles, etc., re-*

- présentant les sites, les événements, les personnages, les monuments, les mœurs et coutumes de l'Algérie et du littoral de la Méditerranée musulmane, recueillies par M. André,* Alger, 1852, Fol. 3 vols. Tunis is contained in the third vol.
- ANDREUCCI, F. See GALEOTTI.
- ANGEL, FR. PIERRE: *Les Frères des Écoles chrétiennes à Tunis*, arts. in 'Œuvres des Écoles d'Orient,' Nov. 1871 and January 1873.

- EL-FIDJANI. Noticed by M. Cherbonneau as one of the best Arab writers to consult for a description of Tunis. See also ROUSSEAU.
- EL-HARAÏRA. See GAY, F.
- EL-KAIROUANI. See EL-RAÏNI.
- EL-LOWLOWI: *Extrait de l'Histoire de la Dynastie des Beni-Hafss, par Abou-Abdallah Mahammed-ben-Ibrahim-El-Lowlowi-El-Zerkeschi. Fragment traduit par M. Alphonse Rousseau*, in 'Journal Asiatique,' 1849, 4 série, xiii., 269.
- 'Ce travail renferme le texte et la traduction française d'un extrait relatif à l'usurpation du pouvoir hafssite par un aventurier du nom de Ahmed-ben-Merzouk-eben-Abi-Amara, qui, l'an 681 de l'hégire, se fit proclamer à Tunis sous les noms de El-Fedhel-eben-Abi-lakaria-Jehia-el-Ouatséq.'—A DEMARSY.
- El-Lowlowi is noticed by M. Cherbonneau as one of the best Arab writers to be consulted for a description of Tunis.
- EL-NEFZAOUI, Cheik Sidi MOHAMMED: *Ouvrage du Cheik, l'imam, le savant, le très érudit, le très intelligent, le très véridique Sidi Mohammed el Nefzaoui: que Dieu très élevé lui fasse miséricorde par sa puissance! Amen! Traduit de l'Arabe par M\*\*\*, Capitaine d'État-major*, 1850. Édition autographiée. First printed as: *Le Jardin parfumé du Cheikh Nefzaoui Manuel d'Érotologie Arabe (xvi<sup>e</sup> Siècle) Traduction revue et corrigée. Imprimé à deux cent vingt exemplaires pour Isidore Liseux et ses Amis*, Paris, 1886. 4to., pp. xv and 298.
- There are two editions of the same work in English, both issued in the same year, both in 8vo., and with the same number of pages, viz., xv. and 256,

- The Perfumed Garden of the Cheikh Nefzaoui, &c.*, Cosmopoli, 1886. There are variations on the title-pages, and the later volume is printed in violet with title-page in red and violet. Nefzaoui lived at Tunis and there wrote his book, which, although not specially devoted to the people of Tunisia, throws much light upon their manners and customs at that time. It is not *virginibus puerisque*. A copy of the original Arab text, probably that from which the French translation was made, exists in the National Library at Algiers.
- EL-RAÏNI: *Histoire de l'Afrique par Mohammed-Ben-Abi-el-Raini-el-Kairouani, traduit de l'arabe par MM. E. Pellissier et Remusat*, Paris, Imp. Roy., 1847. 4to. (vol. vii. of 'L'Exploration scientifique de l'Algérie').
- 'Cet auteur donne une description de Tunis, suivie de l'histoire des différentes dynasties qui ont régné sur Tunis jusqu'à l'an 1681 de notre ère, et terminée par une description des curiosités de la ville et des usages de ses habitants; . . . on y trouve des renseignements originaux et tirés de la tradition orale, surtout dans la dernière partie qui traite de la conquête de Tunis par les Turcs.'—A. DEMARCY.
- ESCAVRAC DE LAUTURE, Le Comte d': *Le Désert et le Soudan*, Paris, Dumaîne, 1853. 8vo., pp. 625, 2 maps and 12 plates. Divided into 5 books: i. Climats africains; ii. Considérations sur la Barbarie, Études sur l'Islamisme et les Mœurs des Musulmans actuels; iii. Les Arabes; iv. Les Noirs colonisés; v. Commerce du Soudan.
- ESPÉRANDIEU, E., Lieut. d'infanterie: *Archéologie tunisienne. Epigraphie des Environs du Kef. Inscriptions recueillies en 1882-83*, Paris, 1885. 8vo., 7 fascicules, cart., planches.

FLACCUS ILLYRICUS. See ILLYRICUS.

FLAUBERT, GUSTAVE: *Salammbô*, Paris, 1862. 8vo.

In 1857 the author visited Tunis, and on the ruins of Carthage the subject and materials of his romance suggested themselves.

In 1883 a portrait of the author and four etchings to illustrate *Salammbô* were made under the auspices of M. Billard of the Society of the 'Amis des Livres' of Paris.

Reprinted in 1887 by Quantin, Paris, in 1 vol., 8vo., undated, with 'Dix compositions par A. Poirson.'

There are two English versions, both of London and of the same year, 1886: one by Mr. M. F. Sheldon, published by Messrs. Saxon & Co.; the other by Mr. J. S. Chartres, issued by Messrs. Vizetelly & Co.

FLAUX, A. DE: *La Régence de Tunis au XIX<sup>e</sup> Siècle*, Paris, 1865. 8vo.

The author was sent on a mission to Carthage by the Count Walewski, then Minister of State. He travelled through Tunisia in every direction. To his work he adds: a translation of the Tunisian

- Constitution, an analysis of the principal treaties concluded by the Bey with western powers, and a translation of some Arab poems. Notices of M. Flaux's book will be found in 'Journal des Savants,' Sept. 1866, and by M. Privas in 'Annales des Voyages,' 1866, ii., 228. See also NONCE-ROCCA.

- One of the most important works on Tunisia, absolutely indispensable for the traveller. It is a plain narrative of the author's journey, through the greater part of the Regency in 1860, undertaken at the expense of M. le Duc de Luynes. The discovery and deciphering of inscriptions being the principal object, most of the pages are devoted to this subject. Apart from this, the work contains much general information, which, allowing for changes introduced since the French occupation, is invariably reliable. The alphabetical index, confined to names of places, ancient and modern, might be more exact and comprehensive. Before publishing his book, the author gave a syllabus of the principal results of his journey in 'Nouvelles Annales des Voyages,' Dec. 1860.
- M. Guérin's *Voyage* was noticed by M. E. Reclus in 'Revue des Deux-Mondes,' March 1, 1863; by M. de Circourt in 'Nouvelles Annales des Voyages,' 1863, ii.; and by M. Poulain de Bossay in 'Bulletin de la Société de Géographie,' 1864, 5 série, viii.

- LELEWELA, JOACHIMA : *Odkrycia Karthagów i Greków na Oceanie Atlanckim, w Warszawie, w Drukarni XX. Püarów*, 1821. 8vo., pp. 177, 2 maps. Translated into German as :  
— *Die Entdeckungen der Carthager und Griechen auf dem atlantischen Ocean, von Joachim Lelewel, mit einem Vorworte von Professor Ritter*, Berlin, Schlesinger, 1831. 8vo., pp. xiv. and 145, 2 maps.
- LEMARCHAND, MAURICE : *Club Alpin Français — Section de Carthage — Renseignements sur Tunis et ses Environs*, Tunis, B. Borrel, 1886.
- This small pamphlet of fourteen pages compiled by M. Lemarchand, Judge at the French tribunals, and Secretary to the Club, contains succinct but most useful notes as to what should be seen at Tunis and other places in the Regency.
- LEO AFRICANUS : *Leoni Africani Totius Africae Descriptionis*, Lib. viii. Leyden, 1682. 8vo.
- 'This work was originally written in Arabic, then translated into Italian by the author, and from Italian into Latin, French, Dutch, and English. The Italian translation is the only correct one : to the French, which is expanded into two vols. folio, and was published at Lyons in 1566, there are appended several accounts of voyages and travels in Africa. Leo was a Spanish Moor, who left Spain in the reduction of Grenada, and travelled a long time in Europe, Asia, and Africa ; his description of the northern parts of Africa is most full and accurate.'—R. KERR.
- The author's Moorish name is HASAN-IBN-MUHAMMED-AL-WAZZAN-AL-FĀSI, and the title of the Italian version mentioned above : *Il Viaggio di G. Leone, etc. Nuova Edizione, emendata ed arricchita*, Venezia, 1837. 4to. He was taken by Corsairs, and baptized by Leo X. The English version bears the title : *A Particular Treatise of all the Main lands and Isles described by John Leo, with map*, London, 1600. 4to. See also 'Purchas his Pilgrimes,' ii., 749. A notice of Leo Africanus, from the pen of A. Berbrugger (see that name), will be found in the 'Revue Africaine,' 1857, xii., 353.

LONGPÉRIER, M. DE: *La Régence de Tunis à l'Exposition de 1867. Histoire du travail.*

Concerning this publication M. A. Demarsy furnishes the following note: 'Dans la deuxième partie du catalogue de l'Histoire du travail, p. 628, se trouve une notice sur la collection d'antiquités exposée, provenant des fouilles pratiquées dans le sol de Carthage par les soins de S. E. Sidi Mohammed ben Moustafa, fils du premier ministre du bey. Le résultat de ces recherches avait été communiqué à M. de Longpérier; et c'est un extrait du catalogue rédigé par M. de Longpérier, pour l'Académie des inscriptions, que M. le baron Jules de Lesseps, commissaire général du gouvernement tunisien a cru devoir insérer. En première ligne, se trouvent vingt-deux inscriptions carthaginoises qui doivent prendre place dans le recueil des inscriptions sémitiques que prépare l'Académie des inscriptions; puis viennent des sculptures antiques, inscriptions latines, mosaïques, monnaies, pierres gravées, vases, lampes et manuscrits.'

LONLAY, DIC DE: *En Tunisie, Souvenirs de sept mois de campagne*, Paris, Dentu, 1882. 8vo., 58 dessins de l'auteur. Relates to the French occupation.

LUBOMIRSKI, Le Prince J.: *La Côte barbaresque et Le Sahara, Excursion dans le Vieux Monde. Illustrations de Ferdinandus*, Paris, E. Dentu, 1880. 8vo., pp. xxii. and 309. The first five chapters relate to Tunis and Carthage.

LUCAS, PAUL: *Voyage du Sieur Paul Lucas, fait par Ordre du Roy, dans la Grèce, l'Asie Mineure, la Macédoine et l'Afrique. Description de l'Anatolie, la Caramanie, la Macédoine, Jérusalem, l'Égypte, le Fioume, et un Mémoire pour servir à l'histoire de Tunis, depuis 1684*, Paris, 1712. 12mo., 2 vols., illustrated.

— *Mémoire pour servir à l'Histoire de Tunis, &c.*, Paris, 1712.

- Besides the drawings of Bruce, the volume contains photographs taken on the spot. As the greater part of the edition was destroyed in the fire which occurred at the publishers' in 1883, the volume is now scarce.
- Concerning this work, the author writes: 'Bruce the traveller was Consul-General at Algiers from 1763 to 1765. He subsequently made extensive explorations in Algeria and Tunis, and magnificent architectural drawings of all the Roman remains he visited, but he left no account of his journey. These drawings are in the possession of his descendant, Lady Thurlow. The author has published an account of his journey over the ground traversed by Bruce, illustrated by fac-similes of his drawings.'

- *Travels through Barbary, etc., in the years 1785 and 1786; containing*

*an Account of the Customs and Manners of the Moors and Bedouin Arabs*, London, 1791. 12mo.

'L'auteur était un botaniste distingué qui herborisa pendant une année dans les environs de Bône, de la Calle, de Constantine, et dans une partie de la Tunisie. Le premier volume contient ses études de mœurs faites dans le pays, études dans lesquelles il se montre sans préjugés contre les Arabes, Maures et Berbères; il assure même que l'éducation de famille des enfants arabes était supérieure à celle des enfants européens. Il fait aussi cette remarque que la haine des arabes pour les *roumis* ne date que des Croisades. Le 2<sup>e</sup> vol. contient ses recherches sur l'histoire naturelle de la Numidie.'

POIRON, M.: *Mémoire concernant l'état présent du Royaume de Tunis et ce qui s'est passé de plus remarquable entre la France et cette Régence, depuis 1701 jusqu'en 1752, par M. Poiron, commissaire des guerres à Toulon*. Manuscript in folio. Bibliothèque Impériale, n<sup>o</sup> 13084, p. 148 à 276. Analysed by M. A. Demarsy at p. 40 of his excellent 'Essai de Bibliographie.'

POLYBIUS: *Historiarum Libri V. Latine, ex versione Nicolai Perroti*, Roma, 1473. Fol. Various other editions. Translated into English by Edward Grimestone, 1634; Henry Shears, 1693; Hampton, 1756; also by C. Watson and Sir Walter Raleigh, which two latter names see.

Polybius was present at the taking of Carthage.

- PRICOT DE SAINTE MARIE, E. See SAINTE MARIE, E. PRICOT DE.
- PROCOPIUS: *De la guerre contre les Vandales*, Paris, 1670. 8vo.
- This Greek historian, a native of Cæsarea, accompanied Belisarius as his secretary in the expedition to North Africa, A.D. 534. His history is divided into eight books, two of which are devoted to the Vandal war.
- Several editions of the original exist, and one English translation by Sir Henry Holcroft.
- *History of the Warres of the Emperour Justinian*, 8 books, London, 1653. Folio.
- 'This translation is exceedingly rare. No copy exists in the British Museum or the Advocates' Library in Edinburgh; there is one at the Bodleian. In the second book, *De Bello Vandalico*, is a notice of the celebrated inscription said to have existed near Tangier, "We flee from the robber Joshua, the son of Nun." For the original text see "Corpus Scriptorum Historiæ Byzantinæ," Bonnæ, 1838.—PLAYFAIR.
- PRUNER-BEY. See OLLIER DE MARI-CHARD.
- PTOLEMY, CLAUDIUS: *Geographie*. Edidit C. F. A. Nobbe. Editio stereotypa Gr. 3 tom., Lipsiæ, 1843-45. 16mo.
- A celebrated geographer and astronomer in the reigns of Hadrian and Antonine. According to his system the world was in the centre of the universe.
- PUECKLER-MUSKAU, Fürst H. L. H. VON: *Semilasso in Afrika. Aus den Papieren des Verstorbenen*. Stuttgart, Hallberger'sche Verlagshandlung, 1836. Large 8vo., 5 parts, 1 coloured lithograph. Martiani Minci Felicis Capellæ de Nuptiis Philosophiæ, Lib. vi., Bas., 1577. Isidori Hispalensis Originum, Lib. xiv., ibid. Collatione Carthaginensi, Notitia Episcoporum Africæ sub Humerico, Concilio Carthaginensi sub Cypriano, &c.; sive Notitia omnium Episcopatum Ecclesiæ Africanæ; quæ præfigitur S. Optuli de Schism. Donatistarum, Libris septem, opera et studio M. Lud. Ell. Du Pin, Antuer., 1702. Notitia utraque Dignitatum cum Orientis tum Occidentis, ultra Arcadii Honoriique tempora, Lugd. 1608. Ravenate anonymo, Amst., 1696. Tabula Peutingeriana, ex edit. G. Hornii, Amst., 1654. [This table, which is indispensable for students of the Ancient Geography of North Africa, has been reproduced in autograph from the original MS. in the Imperial Library at Vienna by E. Chambrier, "Commis auxiliaire au Secrétariat du Conseil de Gouvernement du Gouvernement Général de l'Algérie."']—PLAYFAIR.

'D'une érudition très-variée, il (Shaw) a, pendant un séjour de douze années en Afrique, parcouru les Régences de Tunis et d'Alger. Dans son ouvrage, l'un des plus importants, sans contredit, que nous possédions sur ces deux contrées, il traite de la géographie, de l'histoire naturelle, du gouvernement et des mœurs des pays qu'il a visités, et il essaye, par des rapprochements quelquefois éronés, mais souvent aussi fort exacts, d'identifier les noms modernes avec les noms antiques.'

—V. GUÉRIN, *Voyage*, i. p. xi.

An art. on Shaw from the pen of

- M. Boucher de la Richarderie will be found in 'Bibliothèque de Voyages,' iv., 18 to 37.

— *Le Bassin du Bagrada et la Voie romaine de Carthage à Hippone par Bulla Regia*, Paris, Imp. Nat., 1881. 4to., pp. 116, maps, plans. Extracted from the 'Mémoires présentés par divers savants à l'Académie des Inscriptions et Belles-Lettres.'

'This treatise, like its predecessor, *Mauritanie Tingitane*, is a combination of historical geography and archaeology. It contains the results of the author's rapid exploration of the valley of the Medjerda, along which the line is to run that is to unite Tunis with the Algerian railway system, now in course of construction, and of which the necessary engineering operations are destroying the last vestiges of many Roman cities. M. Tissot has succeeded in fixing certain positions hitherto unknown, and in preserving memorials of various monuments of which all traces would soon

have been lost. There are two maps of the Medjerda and plans of the ruins of Bulla Regia (Hamman Darradji) and Utica, with coloured views of Simittu and Trajan's bridge there, Bulla Regia, Tiberius' bridge, and Vespasian's camp between Picus and Vicus Augusti.'—*Extr. from 'Catalogue of Royal Geogr. Soc.'*

TISSOT, JACQUES: *La Tunisie*, art. in 'La France Coloniale,' par A. Rambaud, Paris, A. Colin et C<sup>e</sup>, 1886. 8vo., 12 maps.
