Departmental Library - Bibliothèque du Ministère

June - 1975 - juin

Environment Canada is one of the largest and most diversified departments of the Canadian government. Information work in such a setting is correspondingly complex and challenging, encompassing as it does the protection, preservation and enhancement of environmental quality and related renewable resources.

The libraries of Environment Canada have been actively serving the Department throughout its evolution. One of the purposes of the present series is to harness some of this activity, in order to prevent duplication and waste of effort. By publishing bibliographies compiled in response to departmental information needs, it is hoped to make some of the collections and services available throughout the library network, better known.

In addition, many requests are received by the Department's libraries from outside sources such as other governments, business and industry and university faculty and students. They see a clear role for Environment Canada in providing information to the public on environmental matters. It is hoped that this series will serve as one of the vehicles for such communication.

Des ministères du gouvernement canadien, Environnement Canada compte parmi les plus vastes et les diversifiés. Aussi, comme il embrasse les secteurs de la protection, de la conservation et de l'amélioration de la qualité de l'environnement et des ressources renouvelables connexes, le travail d'information qui s'y fait est-il à la fois complexe et exigeant?

Les bibliothèques d'Environnement Canada ont joué un rôle actif tout au long de l'évolution du Ministère. La publication de la présente série vise à cerner une partie de cette activité afin d'éviter les recoupements et les efforts inutiles. Les besoins d'information du Ministère sont à l'origine de la compilation effectuée et nous espérons que cette publication permettra de mieux faire connaître une partie des collections et des services qu'offre le réseau de bibliothèque.

En outre, le Ministère reçoit de nombreuses demandes de renseignements de l'extérieur: autres gouvernements, hommes d'affaires, industriels, facultés universitaires et étudiants. Ils attribuent à l'Environnement Canada un rôle bien défini, celui de transmettre au public les renseignements relatifs aux questions environnementales. Nous espérons que cette série permettra de répondre en partie à ce besoin de communication.

Introduction

This bibliography was prepared in response to an inquiry on the fish protein concentrate (FPC) industry. It covers the years 1970 to 1974. Literature published prior to 1970 has already been covered in a comprehensive work by the Library of Congress.¹

The main sources consulted for this compilation were Commercial Fisheries Abstracts, Marine Fisheries Abstracts, Food Science and Technology Abstracts and Nutrition Abstracts, as well as the periodical and monograph collections of the Fontaine Library, Department of the Environment.

The contents of this bibliography cover only the general literature on fish protein concentrate and the use of fish protein concentrate in the human diet. All literature regarding processing and manufacturing, chemistry and nutritional studies has been omitted, as has the patent literature.

M. Hillman
January 1975

La présente bibliographie fait suite à une demande de renseignements concernant l'industrie des concentrés de protéines du poisson. Elle englobe les ouvrages parus entre 1970 et 1974, la Bibliothèque du Congrès (1) ayant dressé un inventaire détaillé des publications antérieures à 1970.

Outre les périodiques et les monographies que l'on trouve à la bibliothèque de l'édifice Fontaine, ministère de l'Environnement, les principales sources consultées ayant servi à établir cette compilation sont: Commercial Fisheries Abstracts, Marine Fisheries Abstracts, Food Science and Technology Abstracts et Nutrition Abstracts.

Cette bibliographie ne donne que la liste des ouvrages généraux traitant des concentrés de protéines du poisson et de leur utilisation dans le régime alimentaire des êtres humains. Toute publication portant sur le traitement et la fabrication, les aspects chimiques et nutritifs et les brevets d'invention a été omise.
