## Research experience

During my PhD, I have studied the mechanisms of maintenance of adaptive polymorphism and evolution of habitat preference. I have used field studies, experimental tests and theoretical (analytical and computer simulations) modelling. The biological model consisted in two species of ecto-parasitic copepods and their three hosts (in the Mediterranean), turbot, brill and flounder. The fact that these organisms are marine, naturally involved me into marine biology topics. I also had to develop skills in programming (in Pascal) and in isoenzymatic genotyping.

During my Post-doc in Bangor, I was trained to theoretical population genetics of structured population, in particular as regard to parameter estimation and testing of Wright's  $F$ -statistics.

When coming back to Montpellier I kept studying adaptive polymorphism and habitat preference but more and more got involved in population genetic structure of hosts and their parasites. I got involved in studies on host-manipulating parasites as well.

I have studied different kind of organisms as parasitic copepods, cestodes, trematodes, fungi, bacteriae, trypanosomes, leishmania, ticks, tsetse flies, gammarid amphipods, marine and fresh water snails, mussels, rats and deer.

Presently my main areas of investigation concern host and parasite co-structures and the use of molecular markers in ecological inferences, and in particular in epidemiological inferences; and the theoretical and applied population genetics of clonal organisms. The main programs I am currently supervising or undertaking are:

Population genetics of trypanosomes and their vectors in Western Africa;

Population genetics of clonal and partially clonal organisms: theory and application to medically or veterinary relevant microbes (trypanosomes, leishmania, yeasts).

Adaptive polymorphism and habitat preference evolution, the use of population genetics tools for population biology inferences in host parasite systems and the population genetics of clones are thus the main fields in which I am specially qualified.
