

## Castanea sativa 'Aspleniifolia'

<b>Height</b>	15-20 m
<b>Crown</b>	round/spherical, dark, dense crown
<b>Bark and branches</b>	brown, grey
<b>Leaf</b>	green
<b>Flowers</b>	cream white, flowers in June, July, fragrant flowers
<b>Fruits</b>	edible fruits, brown
<b>Spines/thorns</b>	None
<b>Toxicity</b>	usually not toxic to people, (large) pets and livestock
<b>Soil type</b>	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
<b>Paving</b>	tolerates no paving
<b>Winter hardiness zone</b>	6a (-23,3 to -20,6 °C)
<b>Wind resistance</b>	good
<b>Other resistances</b>	resistant to frost (WH 1 - 6), can withstand wind
<b>Fauna tree</b>	resistant to frost (WH 1 - 6), can withstand wind, valuable for butterflies
<b>Shape</b>	clearstem tree

A tree with a broad and rounded crown that grows irregularly. Height 15 - 20 (25) m. The shape of the leaf differs radically from that of the species. The leaf is linear to elongated, with irregular deep incisions and is sharply serrated. Sometimes it is linear to lanceolate. The narrowest leaves, generally at the top of the summer shoots, are approx. 1 cm wide. It can happen regularly that the leaves 'revert' to assume the shape of those of the species. The dark green leaves are very glossy. Young leaves carry velvety hairs on the underside. Occasionally light-green to yellow spots occur on the green leaf. The flowers and fruit are similar to those of the species. Winter hardiness zone: 6a
